reference:

- CR POL LL\_RTC\_SetOutputPolarity

### **LL\_RTC\_GetOutputPolarity**

Function name **`_STATIC_INLINE uint32_t LL_RTC_GetOutputPolarity(RTC_TypeDef * RTCx)`**

Function description Get Output polarity.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL\_RTC\_OUTPUTPOLARITY\_PIN\_HIGH
  - LL\_RTC\_OUTPUTPOLARITY\_PIN\_LOW

Reference Manual to  
LL API cross  
reference:

- CR POL LL\_RTC\_GetOutputPolarity

### **LL\_RTC\_EnableShadowRegBypass**

Function name **`_STATIC_INLINE void LL_RTC_EnableShadowRegBypass(RTC_TypeDef * RTCx)`**

Function description Enable Bypass the shadow registers.

Parameters

- **RTCx:** RTC Instance

Return values

- **None**

Notes

- Bit is write-protected. LL\_RTC\_DisableWriteProtection function should be called before.

Reference Manual to

reference:

### **LL\_RTC\_ALMA\_GetSubSecond**

Function name      **\_STATIC\_INLINE uint32\_t LL\_RTC\_ALMA\_GetSubSecond (RTC\_TypeDef \* RTCx)**

Function description      Get Alarm A Sub seconds value.

Parameters      • **RTCx:** RTC Instance

Return values      • **Value:** between Min\_Data=0x00 and Max\_Data=0x7FFF

Reference Manual to  
LL API cross  
reference:

### **LL\_RTC\_ALMB\_Enable**

Function name      **\_STATIC\_INLINE void LL\_RTC\_ALMB\_Enable (RTC\_TypeDef \* RTCx)**

Function description      Enable Alarm B.

Parameters      • **RTCx:** RTC Instance

Return values      • **None**

Notes      • Bit is write-protected. LL\_RTC\_DisableWriteProtection function should be called before.

Reference Manual to  
LL API cross  
reference:

### **LL\_RTC\_ALMB\_Disable**

Function name      **\_STATIC\_INLINE void LL\_RTC\_ALMB\_Disable (RTC\_TypeDef \* RTCx)**

Function description      Disable Alarm B.

Parameters      • **RTCx:** RTC Instance

Return values      • **None**

Notes      • Bit is write-protected. LL\_RTC\_DisableWriteProtection function should be called before.

Reference Manual to  
LL API cross  
reference:

### **LL\_RTC\_ALMB\_SetMask**

Function name      **\_STATIC\_INLINE void LL\_RTC\_ALMB\_SetMask (RTC\_TypeDef \* RTCx, uint32\_t Mask)**

Function description      Specify the Alarm B masks.

### **LL\_RTC\_ALMB\_SetTimeFormat**

Function name      **STATIC\_INLINE void LL\_RTC\_ALMB\_SetTimeFormat(RTC\_TypeDef \* RTCx, uint32\_t TimeFormat)**

Function description      Set ALARM B time format (AM/24-hour or PM notation)

Parameters

- **RTCx:** RTC Instance
- **TimeFormat:** This parameter can be one of the following values:
  - LL\_RTC\_ALMB\_TIME\_FORMAT\_AM
  - LL\_RTC\_ALMB\_TIME\_FORMAT\_PM

Return values

- **None**

- TAFCR TAMP3E LL\_RTC\_TAMPER\_Disable

### **LL\_RTC\_TAMPER\_DisablePullUp**

Function name      **\_\_STATIC\_INLINE void LL\_RTC\_TAMPER\_DisablePullUp( RTC\_TypeDef \* RTCx )**

Function description      Disable RTC\_TAMPx pull-up disable (Disable precharge of RTC\_TAMPx pins)

Parameters      • **RTCx:** RTC Instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• TAFCR TAMPPUDIS LL\_RTC\_TAMPER\_DisablePullUp

### **LL\_RTC\_TAMPER\_EnablePullUp**

Function name      **\_\_STATIC\_INLINE void LL\_RTC\_TAMPER\_EnablePullUp( RTC\_TypeDef \* RTCx )**

Function description      Enable RTC\_TAMPx pull-up disable ( Precharge RTC\_TAMPx pins before sampling)

Parameters      • **RTCx:** RTC Instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• TAFCR TAMPPUDIS LL\_RTC\_TAMPER\_EnablePullUp

### **LL\_RTC\_TAMPER\_SetPrecharge**

Function name      **\_\_STATIC\_INLINE void LL\_RTC\_TAMPER\_SetPrecharge( RTC\_TypeDef \* RTCx, uint32\_t Duration )**

Function description      Set RTC\_TAMPx precharge duration.

Parameters

- **RTCx:** RTC Instance
- **Duration:** This parameter can be one of the following values:
  - LL\_RTC\_TAMPER\_DURATION\_1RTCCLK
  - LL\_RTC\_TAMPER\_DURATION\_2RTCCLK
  - LL\_RTC\_TAMPER\_DURATION\_4RTCCLK
  - LL\_RTC\_TAMPER\_DURATION\_8RTCCLK

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• TAFCR TAMPPRCH LL\_RTC\_TAMPER\_SetPrecharge

### **LL\_RTC\_TAMPER\_GetPrecharge**

Function name      **\_\_STATIC\_INLINE uint32\_t LL\_RTC\_TAMPER\_GetPrecharge( RTC\_TypeDef \* RTCx )**

Function description      Get RTC\_TAMPx precharge duration.

**LL\_RTC\_WAKEUP\_IsEnabled**

Function name **`_STATIC_INLINE uint32_t LL_RTC_WAKEUP_IsEnabled(RTC_TypeDef * RTCx)`**

Function description Check if Wakeup timer is enabled or not.

Parameters • **RTCx:** RTC Instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• CR WUTE LL\_RTC\_WAKEUP\_IsEnabled

**LL\_RTC\_WAKEUP\_SetClock**

Function name **`_STATIC_INLINE void LL_RTC_WAKEUP_SetClock(RTC_TypeDef * RTCx, uint32_t WakeupClock)`**

Function description Select Wakeup clock.

Parameters

- **RTCx:** RTC Instance
- **WakeupClock:** This parameter can be one of the following values:
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_16
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_8
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_4
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_2
  - LL\_RTC\_WAKEUPCLOCK\_CKSPRE
  - LL\_RTC\_WAKEUPCLOCK\_CKSPRE\_WUT

Return values • **None**

Notes

- Bit is write-protected. LL\_RTC\_DisableWriteProtection function should be called before.
- Bit can be written only when RTC\_CR WUTE bit = 0 and RTC\_ISR WUTWF bit = 1

Reference Manual to  
LL API cross  
reference:  
• CR WUCKSEL LL\_RTC\_WAKEUP\_SetClock

**LL\_RTC\_WAKEUP\_GetClock**

Function name **`_STATIC_INLINE uint32_t LL_RTC_WAKEUP_GetClock(RTC_TypeDef * RTCx)`**

Function description Get Wakeup clock.

Parameters

- **RTCx:** RTC Instance

Return values

- **Returned:** value can be one of the following values:
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_16
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_8
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_4
  - LL\_RTC\_WAKEUPCLOCK\_DIV\_2
  - LL\_RTC\_WAKEUPCLOCK\_CKSPRE
  - LL\_RTC\_WAKEUPCLOCK\_CKSPRE\_WUT

| Notes                | <ul style="list-style-type: none"> <li>• The RTC Resynchronization mode is write protected, use the LL_RTC_DisableWriteProtection before calling this function.</li> <li>• To read the calendar through the shadow registers after Calendar initialization, calendar update or after wakeup from low power modes the software must first clear the RSF flag. The software must then wait until it is set again before reading the calendar, which means that the calendar registers have been correctly copied into the RTC_TR and RTC_DR shadow registers.</li> </ul> |

## 75.3 RTC Firmware driver defines

### 75.3.1 RTC

#### ALARM OUTPUT

|                         |                        |
|-------------------------|------------------------|
| LL_RTC_ALARMOUT_DISABLE | Output disabled        |
| LL_RTC_ALARMOUT_ALMA    | Alarm A output enabled |
| LL_RTC_ALARMOUT_ALMB    | Alarm B output enabled |
| LL_RTC_ALARMOUT_WAKEUP  | Wakeups output enabled |

#### ALARM OUTPUT TYPE

|                                   |                                                      |
|-----------------------------------|------------------------------------------------------|
| LL_RTC_ALARM_OUTPUTTYPE_OPENDRAIN | RTC_ALARM, when mapped on PC13, is open-drain output |
| LL_RTC_ALARM_OUTPUTTYPE_PUSHPULL  | RTC_ALARM, when mapped on PC13, is push-pull output  |

#### ALARMA MASK

|                              |                                            |
|------------------------------|--------------------------------------------|
| LL_RTC_ALMA_MASK_NONE        | No masks applied on Alarm A                |
| LL_RTC_ALMA_MASK_DATEWEEKDAY | Date/day do not care in Alarm A comparison |
| LL_RTC_ALMA_MASK_HOURS       | Hours do not care in Alarm A comparison    |
| LL_RTC_ALMA_MASK_MINUTES     | Minutes do not care in Alarm A comparison  |

|                          |                                           |
|--------------------------|-------------------------------------------|
| LL_RTC_ALMA_MASK_SECONDS | Seconds do not care in Alarm A comparison |
| LL_RTC_ALMA_MASK_ALL     | Masks all                                 |

**ALARMA TIME FORMAT**

LL\_RTC\_ALMA\_TIME\_FORMAT\_AM AM or 24-hour format

LL\_RTC\_ALMA\_TIME\_FORMAT\_PM PM

**RTC Alarm A Date WeekDay**

LL\_RTC\_ALMA\_DATEWEEKDAYSEL\_DATE Alarm A Date is selected

LL\_RTC\_ALMA\_DATEWEEKDAYSEL\_WEEKDAY Alarm A WeekDay is selected

**ALARMB MASK**

LL\_RTC\_ALMB\_MASK\_NONE No masks applied on Alarm B

LL\_RTC\_ALMB\_MASK\_DATEWEEKDAY Date/day do not care in Alarm B comparison

LL\_RTC\_ALMB\_MASK\_HOURS Hours do not care in Alarm B comparison

LL\_RTC\_ALMB\_MASK\_MINUTES Minutes do not care in Alarm B comparison

LL\_RTC\_ALMB\_MASK\_SECONDS Seconds do not care in Alarm B comparison

LL\_RTC\_ALMB\_MASK\_ALL Masks all

**ALARMB TIME FORMAT**

LL\_RTC\_ALMB\_TIME\_FORMAT\_AM AM or 24-hour format

LL\_RTC\_ALMB\_TIME\_FORMAT\_PM PM

**RTC Alarm B Date WeekDay**

LL\_RTC\_ALMB\_DATEWEEKDAYSEL\_DATE Alarm B Date is selected

LL\_RTC\_ALMB\_DATEWEEKDAYSEL\_WEEKDAY Alarm B WeekDay is selected

**Calibration pulse insertion**

LL\_RTC\_CALIB\_INSERTPULSE\_NONE No RTCCLK pulses are added

LL\_RTC\_CALIB\_INSERTPULSE\_SET One RTCCLK pulse is effectively inserted every 2<sup>exp11</sup> pulses (frequency increased by 488.5 ppm)

**Calibration output**

LL\_RTC\_CALIB\_OUTPUT\_NONE Calibration output disabled

LL\_RTC\_CALIB\_OUTPUT\_1HZ Calibration output is 1 Hz

LL\_RTC\_CALIB\_OUTPUT\_512HZ Calibration output is 512 Hz

**Calibration period**

LL\_RTC\_CALIB\_PERIOD\_32SEC Use a 32-second calibration cycle period

LL\_RTC\_CALIB\_PERIOD\_16SEC Use a 16-second calibration cycle period

LL\_RTC\_CALIB\_PERIOD\_8SEC Use a 8-second calibration cycle period

**FORMAT**

LL\_RTC\_FORMAT\_BIN Binary data format

LL\_RTC\_FORMAT\_BCD BCD data format

LL\_RTC\_MONTH\_MAY May

LL\_RTC\_MONTH\_JUNE June

LL\_RTC\_MONTH\_JULY July

LL\_RTC\_MONTH\_AUGUST August

LL\_RTC\_MONTH\_SEPTMBER September

LL\_RTC\_MONTH\_OCTOBER October

LL\_RTC\_MONTH\_NOVEMBER November

LL\_RTC\_MONTH\_DECEMBER December

**OUTPUT POLARITY PIN**

LL\_RTC\_OUTPUTPOLARITY\_PIN\_HIGH Pin is high when ALRAF/ALRBF/WUTF is asserted (depending on OSEL)

LL\_RTC\_OUTPUTPOLARITY\_PIN\_LOW Pin is low when ALRAF/ALRBF/WUTF is asserted (depending on OSEL)

**PIN**

LL\_RTC\_PIN\_PC13 PC13 is forced to push-pull output if all RTC alternate functions are disabled

LL\_RTC\_PIN\_PC14 PC14 is forced to push-pull output if LSE is disabled

LL\_RTC\_PIN\_PC15 PC15 is forced to push-pull output if LSE is disabled

**SHIFT SECOND**

LL\_RTC\_SHIFT\_SECOND\_DELAY

LL\_RTC\_SHIFT\_SECOND\_ADVANCE

**TAMPER**

LL\_RTC\_TAMPER\_1 RTC\_TAMP1 input detection

LL\_RTC\_TAMPER\_2 RTC\_TAMP2 input detection

LL\_RTC\_TAMPER\_3 RTC\_TAMP3 input detection

**TAMPER ACTIVE LEVEL**

|                                 |                                                                                                                     |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------|
| LL_RTC_TAMPER_ACTIVELEVEL_TAMP1 | RTC_TAMP1 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event |
| LL_RTC_TAMPER_ACTIVELEVEL_TAMP2 | RTC_TAMP2 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event |
| LL_RTC_TAMPER_ACTIVELEVEL_TAMP3 | RTC_TAMP3 input falling edge (if TAMPFLT = 00) or staying high (if TAMPFLT != 00) triggers a tamper detection event |

**TAMPER DURATION**

|                                |                                                                    |
|--------------------------------|--------------------------------------------------------------------|
| LL_RTC_TAMPER_DURATION_1RTCCLK | Tamper pins are pre-charged before sampling during 1 RTCCLK cycle  |
| LL_RTC_TAMPER_DURATION_2RTCCLK | Tamper pins are pre-charged before sampling during 2 RTCCLK cycles |
| LL_RTC_TAMPER_DURATION_4RTCCLK | Tamper pins are pre-charged before sampling during 4 RTCCLK cycles |
| LL_RTC_TAMPER_DURATION_8RTCCLK | Tamper pins are pre-charged before sampling during 8 RTCCLK cycles |

**TAMPER FILTER**

|                              |                                                                      |
|------------------------------|----------------------------------------------------------------------|
| LL_RTC_TAMPER_FILTER_DISABLE | Tamper filter is disabled                                            |
| LL_RTC_TAMPER_FILTER_2SAMPLE | Tamper is activated after 2 consecutive samples at the active level  |
| LL_RTC_TAMPER_FILTER_4SAMPLE | Tamper is activated after 4 consecutive samples at the active level  |
| LL_RTC_TAMPER_FILTER_8SAMPLE | Tamper is activated after 8 consecutive samples at the active level. |

**TAMPER MASK**

|                            |                                                                                                                                     |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| LL_RTC_TAMPER_MASK_TAMPER1 | Tamper 1 event generates a trigger event. TAMP1F is masked and internally cleared by hardware. The backup registers are not erased  |
| LL_RTC_TAMPER_MASK_TAMPER2 | Tamper 2 event generates a trigger event. TAMP2F is masked and internally cleared by hardware. The backup registers are not erased. |
| LL_RTC_TAMPER_MASK_TAMPER3 | Tamper 3 event generates a trigger event. TAMP3F is masked and internally cleared by hardware. The backup registers are not erased  |

**TAMPER NO ERASE**

|                               |                                                     |
|-------------------------------|-----------------------------------------------------|
| LL_RTC_TAMPER_NOERASE_TAMPER1 | Tamper 1 event does not erase the backup registers. |
| LL_RTC_TAMPER_NOERASE_TAMPER2 | Tamper 2 event does not erase the backup registers. |

**LL\_RTC\_TAMPER\_NOERASE\_TAMPER3** Tamper 3 event does not erase the backup registers.

#### **TAMPER SAMPLING FREQUENCY DIVIDER**

|                                  |                                                                         |
|----------------------------------|-------------------------------------------------------------------------|
| LL_RTC_TAMPER_SAMPLFREQDIV_32768 | Each of the tamper inputs are sampled with a frequency = RTCCLK / 32768 |
| LL_RTC_TAMPER_SAMPLFREQDIV_16384 | Each of the tamper inputs are sampled with a frequency = RTCCLK / 16384 |
| LL_RTC_TAMPER_SAMPLFREQDIV_8192  | Each of the tamper inputs are sampled with a frequency = RTCCLK / 8192  |
| LL_RTC_TAMPER_SAMPLFREQDIV_4096  | Each of the tamper inputs are sampled with a frequency = RTCCLK / 4096  |
| LL_RTC_TAMPER_SAMPLFREQDIV_2048  | Each of the tamper inputs are sampled with a frequency = RTCCLK / 2048  |
| LL_RTC_TAMPER_SAMPLFREQDIV_1024  | Each of the tamper inputs are sampled with a frequency = RTCCLK / 1024  |
| LL_RTC_TAMPER_SAMPLFREQDIV_512   | Each of the tamper inputs are sampled with a frequency = RTCCLK / 512   |
| LL_RTC_TAMPER_SAMPLFREQDIV_256   | Each of the tamper inputs are sampled with a frequency = RTCCLK / 256   |

#### **TIMESTAMP EDGE**

|                               |                                                      |
|-------------------------------|------------------------------------------------------|
| LL_RTC_TIMESTAMP_EDGE_RISING  | RTC_TS input rising edge generates a timestamp event |
| LL_RTC_TIMESTAMP_EDGE_FALLING | RTC_TS input falling edge generates a timestamp even |

#### **TIME FORMAT**

|                             |                      |
|-----------------------------|----------------------|
| LL_RTC_TIME_FORMAT_AM_OR_24 | AM or 24-hour format |
| LL_RTC_TIME_FORMAT_PM       | PM                   |

#### **TIMESTAMP TIME FORMAT**

|                          |                      |
|--------------------------|----------------------|
| LL_RTC_TS_TIME_FORMAT_AM | AM or 24-hour format |
| LL_RTC_TS_TIME_FORMAT_PM | PM                   |

#### **WAKEUP CLOCK DIV**

|                               |                                                                                       |
|-------------------------------|---------------------------------------------------------------------------------------|
| LL_RTC_WAKEUPCLOCK_DIV_16     | RTC/16 clock is selected                                                              |
| LL_RTC_WAKEUPCLOCK_DIV_8      | RTC/8 clock is selected                                                               |
| LL_RTC_WAKEUPCLOCK_DIV_4      | RTC/4 clock is selected                                                               |
| LL_RTC_WAKEUPCLOCK_DIV_2      | RTC/2 clock is selected                                                               |
| LL_RTC_WAKEUPCLOCK_CKSPRE     | ck_spre (usually 1 Hz) clock is selected                                              |
| LL_RTC_WAKEUPCLOCK_CKSPRE_WUT | ck_spre (usually 1 Hz) clock is selected and 2exp16 is added to the WUT counter value |

#### **WEEK DAY**

|                       |        |
|-----------------------|--------|
| LL_RTC_WEEKDAY_MONDAY | Monday |
|-----------------------|--------|

---

|                          |           |
|--------------------------|-----------|
| LL_RTC_WEEKDAY_TUESDAY   | Tuesday   |
| LL_RTC_WEEKDAY_WEDNESDAY | Wednesday |
| LL_RTC_WEEKDAY_THURSDAY  | Thrusday  |
| LL_RTC_WEEKDAY_FRIDAY    | Friday    |
| LL_RTC_WEEKDAY_SATURDAY  | Saturday  |
| LL_RTC_WEEKDAY_SUNDAY    | Sunday    |

**Convert helper Macros****\_\_LL\_RTC\_CONVERT\_BIN2BCD** **Description:**

- Helper macro to convert a value from 2 digit decimal format to BCD format.

**Parameters:**

- \_\_VALUE\_\_: Byte to be converted

**Return value:**

- Converted: byte

**\_\_LL\_RTC\_CONVERT\_BCD2BIN** **Description:**

- Helper macro to convert a value from BCD format to 2 digit decimal format.

**Parameters:**

- \_\_VALUE\_\_: BCD value to be converted

**Return value:**

- Converted: byte

**Date helper Macros****\_\_LL\_RTC\_GET\_WEEKDAY** **Description:**

- Helper macro to retrieve weekday.

**Parameters:**

- \_\_RTC\_DATE\_\_: Date returned by

**Return value:**

- Returned: value can be one of the following values:
  - LL\_RTC\_WEEKDAY\_MONDAY
  - LL\_RTC\_WEEKDAY\_TUESDAY
  - LL\_RTC\_WEEKDAY\_WEDNESDAY
  - LL\_RTC\_WEEKDAY\_THURSDAY
  - LL\_RTC\_WEEKDAY\_FRIDAY
  - LL\_RTC\_WEEKDAY\_SATURDAY
  - LL\_RTC\_WEEKDAY\_SUNDAY

**\_\_LL\_RTC\_GET\_YEAR****Description:**

- Helper macro to retrieve Year in BCD format.

**Parameters:**

- \_\_RTC\_DATE\_\_: Value returned by

---

**\_LL\_RTC\_GET\_MONTH****Return value:**

- Year: in BCD format (0x00 . . . 0x99)

**Description:**

- Helper macro to retrieve Month in BCD format.

**Parameters:**

- \_\_RTC\_DATE\_\_: Value returned by

**Return value:**

- Returned: value can be one of the following values:

- LL\_RTC\_MONTH\_JANUARY
- LL\_RTC\_MONTH\_FEBRUARY
- LL\_RTC\_MONTH\_MARCH
- LL\_RTC\_MONTH\_APRI
- LL\_RTC\_MONTH\_MAY
- LL\_RTC\_MONTH\_JUNE
- LL\_RTC\_MONTH\_JULY
- LL\_RTC\_MONTH\_AUGUST
- LL\_RTC\_MONTH\_SEPTEMBER
- LL\_RTC\_MONTH\_OCTOBER
- LL\_RTC\_MONTH\_NOVEMBER
- LL\_RTC\_MONTH\_DECEMBER

**\_LL\_RTC\_GET\_DAY****Description:**

- Helper macro to retrieve Day in BCD format.

**Parameters:**

- \_\_RTC\_DATE\_\_: Value returned by

**Return value:**

- Day: in BCD format (0x01 . . . 0x31)

**Time helper Macros****\_LL\_RTC\_GET\_HOUR****Description:**

- Helper macro to retrieve hour in BCD format.

**Parameters:**

- \_\_RTC\_TIME\_\_: RTC time returned by

**Return value:**

- Hours: in BCD format (0x01 . . . 0x12 or between Min\_Data=0x00 and Max\_Data=0x23)

**\_LL\_RTC\_GET\_MINUTE****Description:**

- Helper macro to retrieve minute in BCD format.

**Parameters:**

- \_\_RTC\_TIME\_\_: RTC time returned by

**Return value:**

- Minutes: in BCD format (0x00 . . . 0x59)

**\_LL\_RTC\_GET\_SECOND    Description:**

- Helper macro to retrieve second in BCD format.

**Parameters:**

- \_\_RTC\_TIME\_\_: RTC time returned by

**Return value:**

- Seconds: in format (0x00...0x59)

**Common Write and read registers Macros****LL\_RTC\_WriteReg    Description:**

- Write a value in RTC register.

**Parameters:**

- \_\_INSTANCE\_\_: RTC Instance
- \_\_REG\_\_: Register to be written
- \_\_VALUE\_\_: Value to be written in the register

**Return value:**

- None

**LL\_RTC\_ReadReg    Description:**

- Read a value in RTC register.

**Parameters:**

- \_\_INSTANCE\_\_: RTC Instance
- \_\_REG\_\_: Register to be read

**Return value:**

- Register: value

## 76 LL SPI Generic Driver

### 76.1 SPI Firmware driver registers structures

#### 76.1.1 LL\_SPI\_InitTypeDef

##### Data Fields

- *uint32\_t TransferDirection*
- *uint32\_t Mode*
- *uint32\_t DataWidth*
- *uint32\_t ClockPolarity*
- *uint32\_t ClockPhase*
- *uint32\_t NSS*
- *uint32\_t BaudRate*
- *uint32\_t BitOrder*
- *uint32\_t CRCCalculation*
- *uint32\_t CRCPoly*

##### Field Documentation

- ***uint32\_t LL\_SPI\_InitTypeDef::TransferDirection***  
Specifies the SPI unidirectional or bidirectional data mode. This parameter can be a value of [\*\*SPI\\_LL\\_EC\\_TRANSFER\\_MODE\*\*](#). This feature can be modified afterwards using unitary function [\*\*LL\\_SPI\\_SetTransferDirection\(\)\*\*](#).
  - ***uint32\_t LL\_SPI\_InitTypeDef::Mode***  
Specifies the SPI mode (Master/Slave). This parameter can be a value of [\*\*SPI\\_LL\\_EC\\_MODE\*\*](#). This feature can be modified afterwards using unitary function [\*\*LL\\_SPI\\_SetMode\(\)\*\*](#).
  - ***uint32\_t LL\_SPI\_InitTypeDef::DataWidth***  
Specifies the SPI data width. This parameter can be a value of [\*\*SPI\\_LL\\_EC\\_DATAWIDTH\*\*](#). This feature can be modified afterwards using unitary function [\*\*LL\\_SPI\\_SetDataWidth\(\)\*\*](#).
  - ***uint32\_t LL\_SPI\_InitTypeDef::ClockPolarity***  
Specifies the serial clock steady state. This parameter can be a value of [\*\*SPI\\_LL\\_EC\\_POLARITY\*\*](#). This feature can be modified afterwards using unitary function [\*\*LL\\_SPI\\_SetClockPolarity\(\)\*\*](#).
  - ***uint32\_t LL\_SPI\_InitTypeDef::ClockPhase***  
Specifies the clock active edge for the bit capture. This parameter can be a value of [\*\*SPI\\_LL\\_EC\\_PHASE\*\*](#). This feature can be modified afterwards using unitary function [\*\*LL\\_SPI\\_SetClockPhase\(\)\*\*](#).
  - ***uint32\_t LL\_SPI\_InitTypeDef::NSS***  
Specifies whether the NSS signal is managed by hardware (NSS pin) or by software using the SSI bit. This parameter can be a value of [\*\*SPI\\_LL\\_EC\\_NSS\\_MODE\*\*](#). This feature can be modified afterwards using unitary function [\*\*LL\\_SPI\\_SetNSSMode\(\)\*\*](#).
  - ***uint32\_t LL\_SPI\_InitTypeDef::BaudRate***  
Specifies the BaudRate prescaler value which will be used to configure the transmit and receive SCK clock. This parameter can be a value of [\*\*SPI\\_LL\\_EC\\_BAUDRATEPRESCALER\*\*](#).
- Note:** The communication clock is derived from the master clock. The slave clock does not need to be set. This feature can be modified afterwards using unitary function [\*\*LL\\_SPI\\_SetBaudRatePrescaler\(\)\*\*](#).

- **`uint32_t LL_SPI_InitTypeDef::BitOrder`**  
Specifies whether data transfers start from MSB or LSB bit. This parameter can be a value of `SPI_LL_EC_BIT_ORDER`. This feature can be modified afterwards using unitary function `LL_SPI_SetTransferBitOrder()`.
- **`uint32_t LL_SPI_InitTypeDef::CRCCalculation`**  
Specifies if the CRC calculation is enabled or not. This parameter can be a value of `SPI_LL_EC_CRC_CALCULATION`. This feature can be modified afterwards using unitary functions `LL_SPI_EnableCRC()` and `LL_SPI_DisableCRC()`.
- **`uint32_t LL_SPI_InitTypeDef::CRCPoly`**  
Specifies the polynomial used for the CRC calculation. This parameter must be a number between Min\_Data = 0x00 and Max\_Data = 0xFFFF. This feature can be modified afterwards using unitary function `LL_SPI_SetCRCPolynomial()`.

## 76.2 SPI Firmware driver API description

### 76.2.1 Detailed description of functions

#### LL\_SPI\_Enable

|                                                   |                                                                               |
|---------------------------------------------------|-------------------------------------------------------------------------------|
| Function name                                     | <code>__STATIC_INLINE void LL_SPI_Enable (SPI_TypeDef * SPIx)</code>          |
| Function description                              | Enable SPI peripheral.                                                        |
| Parameters                                        | <ul style="list-style-type: none"> <li>• <b>SPIx:</b> SPI Instance</li> </ul> |
| Return values                                     | <ul style="list-style-type: none"> <li>• <b>None</b></li> </ul>               |
| Reference Manual to<br>LL API cross<br>reference: | <ul style="list-style-type: none"> <li>• CR1 SPE LL_SPI_Enable</li> </ul>     |

#### LL\_SPI\_Disable

|                                                   |                                                                                                                                     |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Function name                                     | <code>__STATIC_INLINE void LL_SPI_Disable (SPI_TypeDef * SPIx)</code>                                                               |
| Function description                              | Disable SPI peripheral.                                                                                                             |
| Parameters                                        | <ul style="list-style-type: none"> <li>• <b>SPIx:</b> SPI Instance</li> </ul>                                                       |
| Return values                                     | <ul style="list-style-type: none"> <li>• <b>None</b></li> </ul>                                                                     |
| Notes                                             | <ul style="list-style-type: none"> <li>• When disabling the SPI, follow the procedure described in the Reference Manual.</li> </ul> |
| Reference Manual to<br>LL API cross<br>reference: | <ul style="list-style-type: none"> <li>• CR1 SPE LL_SPI_Disable</li> </ul>                                                          |

#### LL\_SPI\_IsEnabled

|                                     |                                                                                    |
|-------------------------------------|------------------------------------------------------------------------------------|
| Function name                       | <code>__STATIC_INLINE uint32_t LL_SPI_IsEnabled (SPI_TypeDef * SPIx)</code>        |
| Function description                | Check if SPI peripheral is enabled.                                                |
| Parameters                          | <ul style="list-style-type: none"> <li>• <b>SPIx:</b> SPI Instance</li> </ul>      |
| Return values                       | <ul style="list-style-type: none"> <li>• <b>State:</b> of bit (1 or 0).</li> </ul> |
| Reference Manual to<br>LL API cross | <ul style="list-style-type: none"> <li>• CR1 SPE LL_SPI_IsEnabled</li> </ul>       |

reference:

### **LL\_SPI\_SetMode**

|                                                   |                                                                                                                                                                                                                                                               |

LL API cross reference:

### **LL\_SPI\_IsActiveFlag\_RXNE**

Function name **\_STATIC\_INLINE uint32\_t LL\_SPI\_IsActiveFlag\_RXNE(SPI\_TypeDef \* SPIx)**

Function description Check if Rx buffer is not empty.

Parameters • **SPIx:** SPI Instance

Return values • **State:** of bit (1 or 0).

- Reference Manual to SR RXNE LL\_SPI\_IsActiveFlag\_RXNE  
LL API cross reference:

### **LL\_SPI\_IsActiveFlag\_TXE**

Function name **\_STATIC\_INLINE uint32\_t LL\_SPI\_IsActiveFlag\_TXE(SPI\_TypeDef \* SPIx)**

Function description Check if Tx buffer is empty.

Parameters • **SPIx:** SPI Instance

Return values • **State:** of bit (1 or 0).

- Reference Manual to SR TXE LL\_SPI\_IsActiveFlag\_TXE  
LL API cross reference:

### **LL\_SPI\_IsActiveFlag\_CRCERR**

Function name **\_STATIC\_INLINE uint32\_t LL\_SPI\_IsActiveFlag\_CRCERR(SPI\_TypeDef \* SPIx)**

Function description Get CRC error flag.

Parameters • **SPIx:** SPI Instance

Return values • **State:** of bit (1 or 0).

- Reference Manual to SR CRCERR LL\_SPI\_IsActiveFlag\_CRCERR  
LL API cross reference:

### **LL\_SPI\_IsActiveFlag\_MODF**

Function name **\_STATIC\_INLINE uint32\_t LL\_SPI\_IsActiveFlag\_MODF(SPI\_TypeDef \* SPIx)**

Function description Get mode fault error flag.

Parameters • **SPIx:** SPI Instance

Return values • **State:** of bit (1 or 0).

- Reference Manual to  
LL API cross  
reference:
- SR MODF LL\_SPI\_IsActiveFlag\_MODF

### LL\_SPI\_IsActiveFlag\_OVR

Function name `_STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_OVR(SPI_TypeDef * SPIx)`

Function description Get overrun error flag.

Parameters • **SPIx:** SPI Instance

Return values • **State:** of bit (1 or 0).

- Reference Manual to  
LL API cross  
reference:
- SR OVR LL\_SPI\_IsActiveFlag\_OVR

### LL\_SPI\_IsActiveFlag\_BSY

Function name `_STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_BSY(SPI_TypeDef * SPIx)`

Function description Get busy flag.

Parameters • **SPIx:** SPI Instance

Return values • **State:** of bit (1 or 0).

Notes • The BSY flag is cleared under any one of the following conditions:  
-When the SPI is correctly disabled  
-When a fault is detected in Master mode (MODF bit set to 1)  
-In Master mode, when it finishes a data transmission and no new data is ready to be sent  
-In Slave mode, when the BSY flag is set to '0' for at least one SPI clock cycle between each data transfer.

- Reference Manual to  
LL API cross  
reference:
- SR BSY LL\_SPI\_IsActiveFlag\_BSY

### LL\_SPI\_IsActiveFlag\_FRE

Function name `_STATIC_INLINE uint32_t LL_SPI_IsActiveFlag_FRE(SPI_TypeDef * SPIx)`

Function description Get frame format error flag.

Parameters • **SPIx:** SPI Instance

Return values • **State:** of bit (1 or 0).

- Reference Manual to  
LL API cross  
reference:
- SR FRE LL\_SPI\_IsActiveFlag\_FRE

**LL\_SPI\_DisableDMAReq\_TX**

Function name      **\_\_STATIC\_INLINE void LL\_SPI\_DisableDMAReq\_TX(SPI\_TypeDef \* SPIx)**

Function description      Disable DMA Tx.

Parameters      • **SPIx:** SPI Instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR2 TXDMAEN LL\_SPI\_DisableDMAReq\_TX

**LL\_SPI\_IsEnabledDMAReq\_TX**

Function name      **\_\_STATIC\_INLINE uint32\_t LL\_SPI\_IsEnabledDMAReq\_TX(SPI\_TypeDef \* SPIx)**

Function description      Check if DMA Tx is enabled.

Parameters      • **SPIx:** SPI Instance

Return values      • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• CR2 TXDMAEN LL\_SPI\_IsEnabledDMAReq\_TX

**LL\_SPI\_SetDMAParity\_RX**

Function name      **\_\_STATIC\_INLINE void LL\_SPI\_SetDMAParity\_RX(SPI\_TypeDef \* SPIx, uint32\_t Parity)**

Function description      Set parity of Last DMA reception.

Parameters      • **SPIx:** SPI Instance

- **Parity:** This parameter can be one of the following values:
  - LL\_SPI\_DMA\_PARITY\_ODD
  - LL\_SPI\_DMA\_PARITY EVEN

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR2 LDMARX LL\_SPI\_SetDMAParity\_RX

**LL\_SPI\_GetDMAParity\_RX**

Function name      **\_\_STATIC\_INLINE uint32\_t LL\_SPI\_GetDMAParity\_RX(SPI\_TypeDef \* SPIx)**

Function description      Get parity configuration for Last DMA reception.

Parameters      • **SPIx:** SPI Instance

Return values      • **Returned:** value can be one of the following values:
 

- LL\_SPI\_DMA\_PARITY\_ODD
- LL\_SPI\_DMA\_PARITY EVEN

- Reference Manual to  
LL API cross  
reference:
- CR2 LDMARX LL\_SPI\_SetDMAParity\_RX

| Return values        | <ul style="list-style-type: none"> <li>• <b>An:</b> ErrorStatus enumeration value:           <ul style="list-style-type: none"> <li>– SUCCESS: SPI registers are de-initialized</li> <li>– ERROR: SPI registers are not de-initialized</li> </ul> </li> </ul> |

### **LL\_SPI\_Init**

|                      |                                                                                                                                                                                                                                                                              |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <b>ErrorStatus LL_SPI_Init (SPI_TypeDef * SPIx,<br/>LL_SPI_InitTypeDef * SPI_InitStruct)</b>                                                                                                                                                                                 |
| Function description | Initialize the SPI registers according to the specified parameters in SPI_InitStruct.                                                                                                                                                                                        |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>SPIx:</b> SPI Instance</li> <li>• <b>SPI_InitStruct:</b> pointer to a LL_SPI_InitTypeDef structure</li> </ul>                                                                                                                    |
| Return values        | <ul style="list-style-type: none"> <li>• <b>An:</b> ErrorStatus enumeration value. (Return always SUCCESS)</li> </ul>                                                                                                                                                        |
| Notes                | <ul style="list-style-type: none"> <li>• As some bits in SPI configuration registers can only be written when the SPI is disabled (SPI_CR1_SPE bit =0), SPI IP should be in disabled state prior calling this function. Otherwise, ERROR result will be returned.</li> </ul> |

### **LL\_SPI\_StructInit**

|                      |                                                                                                                                                                  |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <b>void LL_SPI_StructInit (LL_SPI_InitTypeDef * SPI_InitStruct)</b>                                                                                              |
| Function description | Set each LL_SPI_InitTypeDef field to default value.                                                                                                              |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>SPI_InitStruct:</b> pointer to a LL_SPI_InitTypeDef structure whose fields will be set to default values.</li> </ul> |
| Return values        | <ul style="list-style-type: none"> <li>• <b>None</b></li> </ul>                                                                                                  |

## 76.3 SPI Firmware driver defines

### 76.3.1 SPI

#### **Baud Rate Prescaler**

|                                |                                    |
|--------------------------------|------------------------------------|
| LL_SPI_BAUDRATEPRESCALER_DIV2  | BaudRate control equal to fPCLK/2  |
| LL_SPI_BAUDRATEPRESCALER_DIV4  | BaudRate control equal to fPCLK/4  |
| LL_SPI_BAUDRATEPRESCALER_DIV8  | BaudRate control equal to fPCLK/8  |
| LL_SPI_BAUDRATEPRESCALER_DIV16 | BaudRate control equal to fPCLK/16 |

|                                 |                                     |
|---------------------------------|-------------------------------------|
| LL_SPI_BAUDRATEPRESCALER_DIV32  | BaudRate control equal to fPCLK/32  |
| LL_SPI_BAUDRATEPRESCALER_DIV64  | BaudRate control equal to fPCLK/64  |
| LL_SPI_BAUDRATEPRESCALER_DIV128 | BaudRate control equal to fPCLK/128 |
| LL_SPI_BAUDRATEPRESCALER_DIV256 | BaudRate control equal to fPCLK/256 |

**Transmission Bit Order**

|                  |                                                 |
|------------------|-------------------------------------------------|
| LL_SPI_LSB_FIRST | Data is transmitted/received with the LSB first |
| LL_SPI_MSB_FIRST | Data is transmitted/received with the MSB first |

**CRC Calculation**

|                               |                          |
|-------------------------------|--------------------------|
| LL_SPI_CRCCALCULATION_DISABLE | CRC calculation disabled |
| LL_SPI_CRCCALCULATION_ENABLE  | CRC calculation enabled  |

**CRC Length**

|                  |                   |
|------------------|-------------------|
| LL_SPI_CRC_8BIT  | 8-bit CRC length  |
| LL_SPI_CRC_16BIT | 16-bit CRC length |

**Datawidth**

|                        |                                       |
|------------------------|---------------------------------------|
| LL_SPI_DATAWIDTH_4BIT  | Data length for SPI transfer: 4 bits  |
| LL_SPI_DATAWIDTH_5BIT  | Data length for SPI transfer: 5 bits  |
| LL_SPI_DATAWIDTH_6BIT  | Data length for SPI transfer: 6 bits  |
| LL_SPI_DATAWIDTH_7BIT  | Data length for SPI transfer: 7 bits  |
| LL_SPI_DATAWIDTH_8BIT  | Data length for SPI transfer: 8 bits  |
| LL_SPI_DATAWIDTH_9BIT  | Data length for SPI transfer: 9 bits  |
| LL_SPI_DATAWIDTH_10BIT | Data length for SPI transfer: 10 bits |
| LL_SPI_DATAWIDTH_11BIT | Data length for SPI transfer: 11 bits |
| LL_SPI_DATAWIDTH_12BIT | Data length for SPI transfer: 12 bits |
| LL_SPI_DATAWIDTH_13BIT | Data length for SPI transfer: 13 bits |
| LL_SPI_DATAWIDTH_14BIT | Data length for SPI transfer: 14 bits |
| LL_SPI_DATAWIDTH_15BIT | Data length for SPI transfer: 15 bits |
| LL_SPI_DATAWIDTH_16BIT | Data length for SPI transfer: 16 bits |

**DMA Parity**

|                        |                        |
|------------------------|------------------------|
| LL_SPI_DMA_PARITY_EVEN | Select DMA parity Even |
| LL_SPI_DMA_PARITY_ODD  | Select DMA parity Odd  |

**Get Flags Defines**

|                  |                          |
|------------------|--------------------------|
| LL_SPI_SR_RXNE   | Rx buffer not empty flag |
| LL_SPI_SR_TXE    | Tx buffer empty flag     |
| LL_SPI_SR_BSY    | Busy flag                |
| LL_SPI_SR_CRCERR | CRC error flag           |
| LL_SPI_SR_MODF   | Mode fault flag          |

|                                          |                                                                                |
|------------------------------------------|--------------------------------------------------------------------------------|
| <code>LL_SPI_SR_OVR</code>               | Overrun flag                                                                   |
| <code>LL_SPI_SR_FRE</code>               | TI mode frame format error flag                                                |
| <b><i>IT Defines</i></b>                 |                                                                                |
| <code>LL_SPI_CR2_RXNEIE</code>           | Rx buffer not empty interrupt enable                                           |
| <code>LL_SPI_CR2_TXEIE</code>            | Tx buffer empty interrupt enable                                               |
| <code>LL_SPI_CR2_ERRIE</code>            | Error interrupt enable                                                         |
| <b><i>Operation Mode</i></b>             |                                                                                |
| <code>LL_SPI_MODE_MASTER</code>          | Master configuration                                                           |
| <code>LL_SPI_MODE_SLAVE</code>           | Slave configuration                                                            |
| <b><i>Slave Select Pin Mode</i></b>      |                                                                                |
| <code>LL_SPI_NSS_SOFT</code>             | NSS managed internally. NSS pin not used and free                              |
| <code>LL_SPI_NSS_HARD_INPUT</code>       | NSS pin used in Input. Only used in Master mode                                |
| <code>LL_SPI_NSS_HARD_OUTPUT</code>      | NSS pin used in Output. Only used in Slave mode as chip select                 |
| <b><i>Clock Phase</i></b>                |                                                                                |
| <code>LL_SPI_PHASE_1EDGE</code>          | First clock transition is the first data capture edge                          |
| <code>LL_SPI_PHASE_2EDGE</code>          | Second clock transition is the first data capture edge                         |
| <b><i>Clock Polarity</i></b>             |                                                                                |
| <code>LL_SPI_POLARITY_LOW</code>         | Clock to 0 when idle                                                           |
| <code>LL_SPI_POLARITY_HIGH</code>        | Clock to 1 when idle                                                           |
| <b><i>Serial Protocol</i></b>            |                                                                                |
| <code>LL_SPI_PROTOCOL_MOTOROLA</code>    | Motorola mode. Used as default value                                           |
| <code>LL_SPI_PROTOCOL_TI</code>          | TI mode                                                                        |
| <b><i>RX FIFO Level</i></b>              |                                                                                |
| <code>LL_SPI_RX_FIFO_EMPTY</code>        | FIFO reception empty                                                           |
| <code>LL_SPI_RX_FIFO_QUARTER_FULL</code> | FIFO reception 1/4                                                             |
| <code>LL_SPI_RX_FIFO_HALF_FULL</code>    | FIFO reception 1/2                                                             |
| <code>LL_SPI_RX_FIFO_FULL</code>         | FIFO reception full                                                            |
| <b><i>RX FIFO Threshold</i></b>          |                                                                                |
| <code>LL_SPI_RX_FIFO_TH_HALF</code>      | RXNE event is generated if FIFO level is greater than or equal to 1/2 (16-bit) |
| <code>LL_SPI_RX_FIFO_TH_QUARTER</code>   | RXNE event is generated if FIFO level is greater than or equal to 1/4 (8-bit)  |
| <b><i>Transfer Mode</i></b>              |                                                                                |
| <code>LL_SPI_FULL_DUPLEX</code>          | Full-Duplex mode. Rx and Tx transfer on 2 lines                                |
| <code>LL_SPI_SIMPLEX_RX</code>           | Simplex Rx mode. Rx transfer only on 1 line                                    |
| <code>LL_SPI_HALF_DUPLEX_RX</code>       | Half-Duplex Rx mode. Rx transfer on 1 line                                     |

`LL_SPI_HALF_DUPLEX_TX` Half-Duplex Tx mode. Tx transfer on 1 line

**TX FIFO Level**

`LL_SPI_TX_FIFO_EMPTY` FIFO transmission empty

`LL_SPI_TX_FIFO_QUARTER_FULL` FIFO transmission 1/4

`LL_SPI_TX_FIFO_HALF_FULL` FIFO transmission 1/2

`LL_SPI_TX_FIFO_FULL` FIFO transmission full

**Common Write and read registers Macros**

`LL_SPI_WriteReg` **Description:**

- Write a value in SPI register.

**Parameters:**

- `__INSTANCE__`: SPI Instance
- `__REG__`: Register to be written
- `__VALUE__`: Value to be written in the register

**Return value:**

- None

`LL_SPI_ReadReg`

**Description:**

- Read a value in SPI register.

**Parameters:**

- `__INSTANCE__`: SPI Instance
- `__REG__`: Register to be read

**Return value:**

- Register: value

### **LL\_SYSCFG\_DisableFastModePlus**

**Function name** `_STATIC_INLINE void LL_SYSCFG_DisableFastModePlus  
(uint32_t ConfigFastModePlus)`

**Function description** Disable the I2C fast mode plus driving capability.

- Parameters**
- **ConfigFastModePlus:** This parameter can be a combination of the following values: (\*) value not defined in all devices.
    - LL\_SYSCFG\_I2C\_FASTMODEPLUS\_PB6
    - LL\_SYSCFG\_I2C\_FASTMODEPLUS\_PB7
    - LL\_SYSCFG\_I2C\_FASTMODEPLUS\_PB8
    - LL\_SYSCFG\_I2C\_FASTMODEPLUS\_PB9
    - LL\_SYSCFG\_I2C\_FASTMODEPLUS\_I2C1
    - LL\_SYSCFG\_I2C\_FASTMODEPLUS\_I2C2 (\*)
    - LL\_SYSCFG\_I2C\_FASTMODEPLUS\_I2C3 (\*)

- Return values**
- **None**

- Reference Manual to LL API cross reference:**
- SYSCFG\_CFGR1\_I2C\_PB6\_FMP
  - LL\_SYSCFG\_DisableFastModePlus
  - SYSCFG\_CFGR1\_I2C\_PB7\_FMP
  - LL\_SYSCFG\_DisableFastModePlus

  - LL\_SYSCFG\_DisableFastModePlus
  - SYSCFG\_CFGR1\_I2C3\_FMP
  - LL\_SYSCFG\_DisableFastModePlus

### **LL\_SYSCFG\_EnableIT\_FPU\_IOC**

**Function name** `_STATIC_INLINE void LL_SYSCFG_EnableIT_FPU_IOC (void )`

**Function description** Enable Floating Point Unit Invalid operation Interrupt.

- Return values**
- **None**

- Reference Manual to LL API cross reference:**
- SYSCFG\_CFGR1\_FPU\_IE\_0
  - LL\_SYSCFG\_EnableIT\_FPU\_IOC

**LL\_SYSCFG\_EnableIT\_FPU\_DZC**

### **LL\_SYSCFG\_SetTIMBreakInputs**

**Function name** `__STATIC_INLINE void LL_SYSCFG_SetTIMBreakInputs(  
                  uint32_t Break)`

**Function description** Set connections to TIMx Break inputs.

**Parameters**

- **Break:** This parameter can be a combination of the following values: (\*) value not defined in all devices.
  - LL\_SYSCFG\_TIMBREAK\_PVD (\*)
  - LL\_SYSCFG\_TIMBREAK\_SRAM\_PARITY (\*)
  - LL\_SYSCFG\_TIMBREAK\_LOCKUP

**Return values**

**Reference Manual to  
LL API cross  
reference:**

- SYSCFG\_CFGR2 LOCKUP\_LOCK  
LL\_SYSCFG\_SetTIMBreakInputs
- SYSCFG\_CFGR2 SRAM\_PARITY\_LOCK  
LL\_SYSCFG\_SetTIMBreakInputs
- SYSCFG\_CFGR2 PVD\_LOCK  
LL\_SYSCFG\_SetTIMBreakInputs

### **LL\_DBGMCU\_APB2\_GRP1\_FreezePeriph**

Function name      **\_\_STATIC\_INLINE void LL\_DBGMCU\_APB2\_GRP1\_FreezePeriph (uint32\_t Periph)**

Function description      Freeze APB2 peripherals.

- Parameters
- **Periph:** This parameter can be a combination of the following values: (\*) value not defined in all devices.
    - LL\_DBGMCU\_APB2\_GRP1\_TIM1\_STOP (\*)
    - LL\_DBGMCU\_APB2\_GRP1\_TIM8\_STOP (\*)
    - LL\_DBGMCU\_APB2\_GRP1\_TIM15\_STOP
    - LL\_DBGMCU\_APB2\_GRP1\_TIM16\_STOP
    - LL\_DBGMCU\_APB2\_GRP1\_TIM17\_STOP
    - LL\_DBGMCU\_APB2\_GRP1\_TIM19\_STOP (\*)
    - LL\_DBGMCU\_APB2\_GRP1\_TIM20\_STOP (\*)
    - LL\_DBGMCU\_APB2\_GRP1\_HRTIM1\_STOP (\*)

- Return values
- **None**

### LL\_FLASH\_SetLatency

**Function name**      `__STATIC_INLINE void LL_FLASH_SetLatency (uint32_t Latency)`

**Function description**      Set FLASH Latency.

**Parameters**      • **Latency:** This parameter can be one of the following values:
 

- LL\_FLASH\_LATENCY\_0
- LL\_FLASH\_LATENCY\_1
- LL\_FLASH\_LATENCY\_2

**Return values**

- **None**

**Reference Manual to  
LL API cross  
reference:**

- FLASH\_ACR LATENCY LL\_FLASH\_SetLatency

### LL\_FLASH\_GetLatency

**Function name**      `__STATIC_INLINE uint32_t LL_FLASH_GetLatency (void )`

**Function description**      Get FLASH Latency.

**Return values**      • **Returned:** value can be one of the following values:
 

- LL\_FLASH\_LATENCY\_0
- LL\_FLASH\_LATENCY\_1
- LL\_FLASH\_LATENCY\_2

**Reference Manual to  
LL API cross**

- FLASH\_ACR LATENCY LL\_FLASH\_GetLatency

reference:

### **LL\_FLASH\_EnablePrefetch**

Function name      **\_\_STATIC\_INLINE void LL\_FLASH\_EnablePrefetch (void )**

Function description      Enable Prefetch.

Return values      •    **None**

Reference Manual to  
LL API cross  
reference:

### **LL\_FLASH\_DisablePrefetch**

Function name      **\_\_STATIC\_INLINE void LL\_FLASH\_DisablePrefetch (void )**

Function description      Disable Prefetch.

Return values      •    **None**

Reference Manual to  
LL API cross  
reference:

### **LL\_FLASH\_IsPrefetchEnabled**

Function name      **\_\_STATIC\_INLINE uint32\_t LL\_FLASH\_IsPrefetchEnabled  
(void )**

Function description      Check if Prefetch buffer is enabled.

Return values      •    **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

### **LL\_FLASH\_EnableHalfCycleAccess**

Function name      **\_\_STATIC\_INLINE void LL\_FLASH\_EnableHalfCycleAccess  
(void )**

Function description      Enable Flash Half Cycle Access.

Return values      •    **None**

Reference Manual to  
LL API cross  
reference:

### **LL\_FLASH\_DisableHalfCycleAccess**

Function name      **\_\_STATIC\_INLINE void LL\_FLASH\_DisableHalfCycleAccess  
(void )**

Function description      Disable Flash Half Cycle Access.

Return values      •    **None**

- Reference Manual to • FLASH\_ACR HLF CYA LL\_FLASH\_DisableHalfCycleAccess  
LL API cross reference:

### **LL\_FLASH\_IsHalfCycleAccessEnabled**

| LL_SYSCFG_TIM15_ENCODEMODE_NOREDIRECTION | No redirection                                                              |
| LL_SYSCFG_TIM15_ENCODEMODE_TIM2          | TIM2 IC1 and TIM2 IC2 are connected to TIM15 IC1 and TIM15 IC2 respectively |
| LL_SYSCFG_TIM15_ENCODEMODE_TIM3          | TIM3 IC1 and TIM3 IC2 are connected to TIM15 IC1 and TIM15 IC2 respectively |
| LL_SYSCFG_TIM15_ENCODEMODE_TIM4          | TIM4 IC1 and TIM4 IC2 are connected to TIM15 IC1 and TIM15 IC2 respectively |

**SYSCFG TIMER BREAK**

|                                |                                                                                                                          |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| LL_SYSCFG_TIMBREAK_PVD         | Enables and locks the PVD connection with TIMx Break Input and also the PVDE and PLS bits of the Power Control Interface |
| LL_SYSCFG_TIMBREAK_SRAM_PARITY | Enables and locks the SRAM_PARITY error signal with Break Input of TIMx                                                  |
| LL_SYSCFG_TIMBREAK_LOCKUP      | Enables and locks the LOCKUP (Hardfault) output of CortexM0 with Break Input of TIMx                                     |

**DBGMCU TRACE Pin Assignment**

|                             |                                                                      |
|-----------------------------|----------------------------------------------------------------------|
| LL_DBGMCU_TRACE_NONE        | TRACE pins not assigned (default state)                              |
| LL_DBGMCU_TRACE_ASYNCNCH    | TRACE pin assignment for Asynchronous Mode                           |
| LL_DBGMCU_TRACE_SYNCH_SIZE1 | TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 1 |
| LL_DBGMCU_TRACE_SYNCH_SIZE2 | TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 2 |
| LL_DBGMCU_TRACE_SYNCH_SIZE4 | TRACE pin assignment for Synchronous Mode with a TRACEDATA size of 4 |

## 78 LL TIM Generic Driver

### 78.1 TIM Firmware driver registers structures

#### 78.1.1 LL\_TIM\_InitTypeDef

##### Data Fields

- *uint16\_t Prescaler*
- *uint32\_t CounterMode*
- *uint32\_t Autoreload*
- *uint32\_t ClockDivision*
- *uint8\_t RepetitionCounter*

##### Field Documentation

- ***uint16\_t LL\_TIM\_InitTypeDef::Prescaler***

Specifies the prescaler value used to divide the TIM clock. This parameter can be a number between Min\_Data=0x0000 and Max\_Data=0xFFFF. This feature can be modified afterwards using unitary function **LL\_TIM\_SetPrescaler()**.

- ***uint32\_t LL\_TIM\_InitTypeDef::CounterMode***

Specifies the counter mode. This parameter can be a value of **TIM\_LL\_EC\_COUNTERMODE**. This feature can be modified afterwards using unitary function **LL\_TIM\_SetCounterMode()**.

- ***uint32\_t LL\_TIM\_InitTypeDef::Autoreload***

Specifies the auto reload value to be loaded into the active Auto-Reload Register at the next update event. This parameter must be a number between Min\_Data=0x0000 and Max\_Data=0xFFFF. Some timer instances may support 32 bits counters. In that case this parameter must be a number between 0x0000 and 0xFFFFFFFF. This feature can be modified afterwards using unitary function **LL\_TIM\_SetAutoReload()**.

- ***uint32\_t LL\_TIM\_InitTypeDef::ClockDivision***

Specifies the clock division. This parameter can be a value of **TIM\_LL\_EC\_CLOCKDIVISION**. This feature can be modified afterwards using unitary function **LL\_TIM\_SetClockDivision()**.

- ***uint8\_t LL\_TIM\_InitTypeDef::RepetitionCounter***

Specifies the repetition counter value. Each time the RCR downcounter reaches zero, an update event is generated and counting restarts from the RCR value (N). This means in PWM mode that (N+1) corresponds to the number of PWM periods in edge-aligned mode the number of half PWM period in center-aligned mode. This parameter must be a number between 0x00 and 0xFF. This feature can be modified afterwards using unitary function **LL\_TIM\_SetRepetitionCounter()**.

#### 78.1.2 LL\_TIM\_OC\_InitTypeDef

##### Data Fields

- *uint32\_t OCMode*
- *uint32\_t OCState*
- *uint32\_t OCNState*
- *uint32\_t CompareValue*
- *uint32\_t OCIdleState*
- *uint32\_t OCNPolarity*
- *uint32\_t OCIdleState*
- *uint32\_t OCNPolarity*

### Field Documentation

- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::OCMode***  
Specifies the output mode. This parameter can be a value of ***TIM\_LL\_EC\_OCMODE***. This feature can be modified afterwards using unitary function ***LL\_TIM\_OC\_SetMode()***.
- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::OCState***  
Specifies the TIM Output Compare state. This parameter can be a value of ***TIM\_LL\_EC\_OCSTATE***. This feature can be modified afterwards using unitary functions ***LL\_TIM\_CC\_EnableChannel()*** or ***LL\_TIM\_CC\_DisableChannel()***.
- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::OCNState***  
Specifies the TIM complementary Output Compare state. This parameter can be a value of ***TIM\_LL\_EC\_OCSTATE***. This feature can be modified afterwards using unitary functions ***LL\_TIM\_CC\_EnableChannel()*** or ***LL\_TIM\_CC\_DisableChannel()***.
- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::CompareValue***  
Specifies the Compare value to be loaded into the Capture Compare Register. This parameter can be a number between Min\_Data=0x0000 and Max\_Data=0xFFFF. This feature can be modified afterwards using unitary function ***LL\_TIM\_OC\_SetCompareCHx*** ( $x=1..6$ ).
- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::OCPolarity***  
Specifies the output polarity. This parameter can be a value of ***TIM\_LL\_EC\_OCPOLARITY***. This feature can be modified afterwards using unitary function ***LL\_TIM\_OC\_SetPolarity()***.
- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::OCNPolarity***  
Specifies the complementary output polarity. This parameter can be a value of ***TIM\_LL\_EC\_OCPOLARITY***. This feature can be modified afterwards using unitary function ***LL\_TIM\_OC\_SetPolarity()***.
- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::OCIdleState***  
Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM\_LL\_EC\_OCIDLESTATE***. This feature can be modified afterwards using unitary function ***LL\_TIM\_OC\_SetIdleState()***.
- ***uint32\_t LL\_TIM\_OC\_InitTypeDef::OCNIdleState***  
Specifies the TIM Output Compare pin state during Idle state. This parameter can be a value of ***TIM\_LL\_EC\_OCIDLESTATE***. This feature can be modified afterwards using unitary function ***LL\_TIM\_OC\_SetIdleState()***.

### 78.1.3 LL\_TIM\_IC\_InitTypeDef

#### Data Fields

- ***uint32\_t IC\_Polarity***
- ***uint32\_t IC\_ActiveInput***
- ***uint32\_t IC\_Prescaler***
- ***uint32\_t IC\_Filter***

#### Field Documentation

- ***uint32\_t LL\_TIM\_IC\_InitTypeDef::IC\_Polarity***  
Specifies the active edge of the input signal. This parameter can be a value of ***TIM\_LL\_EC\_IC\_POLARITY***. This feature can be modified afterwards using unitary function ***LL\_TIM\_IC\_SetPolarity()***.
- ***uint32\_t LL\_TIM\_IC\_InitTypeDef::IC\_ActiveInput***  
Specifies the input. This parameter can be a value of ***TIM\_LL\_EC\_ACTIVEINPUT***. This feature can be modified afterwards using unitary function ***LL\_TIM\_IC\_SetActiveInput()***.
- ***uint32\_t LL\_TIM\_IC\_InitTypeDef::IC\_Prescaler***  
Specifies the Input Capture Prescaler. This parameter can be a value of

- TIM\_LL\_EC\_ICPSC***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetPrescaler()**.
- ***uint32\_t LL\_TIM\_IC\_InitTypeDef::ICFilter***  
Specifies the input capture filter. This parameter can be a value of ***TIM\_LL\_EC\_IC\_FILTER***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetFilter()**.

#### 78.1.4 **LL\_TIM\_ENCODER\_InitTypeDef**

##### Data Fields

- ***uint32\_t EncoderMode***
- ***uint32\_t IC1Polarity***
- ***uint32\_t IC1ActiveInput***
- ***uint32\_t IC1Prescaler***
- ***uint32\_t IC1Filter***
- ***uint32\_t IC2Polarity***
- ***uint32\_t IC2ActiveInput***
- ***uint32\_t IC2Prescaler***
- ***uint32\_t IC2Filter***

##### Field Documentation

- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::EncoderMode***  
Specifies the encoder resolution (x2 or x4). This parameter can be a value of ***TIM\_LL\_EC\_ENCODERMODE***. This feature can be modified afterwards using unitary function **LL\_TIM\_SetEncoderMode()**.
- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC1Polarity***  
Specifies the active edge of TI1 input. This parameter can be a value of ***TIM\_LL\_EC\_IC\_POLARITY***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetPolarity()**.
- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC1ActiveInput***  
Specifies the TI1 input source. This parameter can be a value of ***TIM\_LL\_EC\_ACTIVEINPUT***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetActiveInput()**.
- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC1Prescaler***  
Specifies the TI1 input prescaler value. This parameter can be a value of ***TIM\_LL\_EC\_ICPSC***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetPrescaler()**.
- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC1Filter***  
Specifies the TI1 input filter. This parameter can be a value of ***TIM\_LL\_EC\_IC\_FILTER***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetFilter()**.
- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC2Polarity***  
Specifies the active edge of TI2 input. This parameter can be a value of ***TIM\_LL\_EC\_IC\_POLARITY***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetPolarity()**.
- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC2ActiveInput***  
Specifies the TI2 input source. This parameter can be a value of ***TIM\_LL\_EC\_ACTIVEINPUT***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetActiveInput()**.
- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC2Prescaler***  
Specifies the TI2 input prescaler value. This parameter can be a value of ***TIM\_LL\_EC\_ICPSC***. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetPrescaler()**.

- ***uint32\_t LL\_TIM\_ENCODER\_InitTypeDef::IC2Filter***  
Specifies the TI2 input filter. This parameter can be a value of **TIM\_LL\_EC\_IC\_FILTER**. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetFilter()**.

### 78.1.5 LL\_TIM\_HALLSENSOR\_InitTypeDef

#### Data Fields

- ***uint32\_t IC1Polarity***
- ***uint32\_t IC1Prescaler***
- ***uint32\_t IC1Filter***
- ***uint32\_t CommutationDelay***

#### Field Documentation

- ***uint32\_t LL\_TIM\_HALLSENSOR\_InitTypeDef::IC1Polarity***  
Specifies the active edge of TI1 input. This parameter can be a value of **TIM\_LL\_EC\_IC\_POLARITY**. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetPolarity()**.
- ***uint32\_t LL\_TIM\_HALLSENSOR\_InitTypeDef::IC1Prescaler***  
Specifies the TI1 input prescaler value. Prescaler must be set to get a maximum counter period longer than the time interval between 2 consecutive changes on the Hall inputs. This parameter can be a value of **TIM\_LL\_EC\_ICPSC**. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetPrescaler()**.
- ***uint32\_t LL\_TIM\_HALLSENSOR\_InitTypeDef::IC1Filter***  
Specifies the TI1 input filter. This parameter can be a value of **TIM\_LL\_EC\_IC\_FILTER**. This feature can be modified afterwards using unitary function **LL\_TIM\_IC\_SetFilter()**.
- ***uint32\_t LL\_TIM\_HALLSENSOR\_InitTypeDef::CommutationDelay***  
Specifies the compare value to be loaded into the Capture Compare Register. A positive pulse (TRGO event) is generated with a programmable delay every time a change occurs on the Hall inputs. This parameter can be a number between Min\_Data = 0x0000 and Max\_Data = 0xFFFF. This feature can be modified afterwards using unitary function **LL\_TIM\_OC\_SetCompareCH2()**.

### 78.1.6 LL\_TIM\_BDTR\_InitTypeDef

#### Data Fields

- ***uint32\_t OSSRState***
- ***uint32\_t OSSISState***
- ***uint32\_t LockLevel***
- ***uint8\_t DeadTime***
- ***uint16\_t BreakState***
- ***uint32\_t BreakPolarity***
- ***uint32\_t BreakFilter***
- ***uint32\_t Break2State***
- ***uint32\_t Break2Polarity***
- ***uint32\_t Break2Filter***
- ***uint32\_t AutomaticOutput***

#### Field Documentation

- ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::OSSRState***  
Specifies the Off-State selection used in Run mode. This parameter can be a value of **TIM\_LL\_EC\_OSSR**. This feature can be modified afterwards using unitary function **LL\_TIM\_SetOffStates()**.

- Note:**This bit-field cannot be modified as long as LOCK level 2 has been programmed.
- ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::OSSIState***  
Specifies the Off-State used in Idle state. This parameter can be a value of ***TIM\_LL\_EC\_OSSI***This feature can be modified afterwards using unitary function ***LL\_TIM\_SetOffStates()***  
**Note:**This bit-field cannot be modified as long as LOCK level 2 has been programmed.
  - ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::LockLevel***  
Specifies the LOCK level parameters. This parameter can be a value of ***TIM\_LL\_EC\_LOCKLEVEL***  
**Note:**The LOCK bits can be written only once after the reset. Once the TIMx\_BDTR register has been written, their content is frozen until the next reset.
  - ***uint8\_t LL\_TIM\_BDTR\_InitTypeDef::DeadTime***  
Specifies the delay time between the switching-off and the switching-on of the outputs. This parameter can be a number between Min\_Data = 0x00 and Max\_Data = 0xFF.This feature can be modified afterwards using unitary function ***LL\_TIM\_OC\_SetDeadTime()***  
**Note:**This bit-field can not be modified as long as LOCK level 1, 2 or 3 has been programmed.
  - ***uint16\_t LL\_TIM\_BDTR\_InitTypeDef::BreakState***  
Specifies whether the TIM Break input is enabled or not. This parameter can be a value of ***TIM\_LL\_EC\_BREAK\_ENABLE***This feature can be modified afterwards using unitary functions ***LL\_TIM\_EnableBRK()*** or ***LL\_TIM\_DisableBRK()***  
**Note:**This bit-field can not be modified as long as LOCK level 1 has been programmed.
  - ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::BreakPolarity***  
Specifies the TIM Break Input pin polarity. This parameter can be a value of ***TIM\_LL\_EC\_BREAK\_POLARITY***This feature can be modified afterwards using unitary function ***LL\_TIM\_ConfigBRK()***  
**Note:**This bit-field can not be modified as long as LOCK level 1 has been programmed.
  - ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::BreakFilter***  
Specifies the TIM Break Filter. This parameter can be a value of ***TIM\_LL\_EC\_BREAK\_FILTER***This feature can be modified afterwards using unitary function ***LL\_TIM\_ConfigBRK()***  
**Note:**This bit-field can not be modified as long as LOCK level 1 has been programmed.
  - ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::Break2State***  
Specifies whether the TIM Break2 input is enabled or not. This parameter can be a value of ***TIM\_LL\_EC\_BREAK2\_ENABLE***This feature can be modified afterwards using unitary functions ***LL\_TIM\_EnableBRK2()*** or ***LL\_TIM\_DisableBRK2()***  
**Note:**This bit-field can not be modified as long as LOCK level 1 has been programmed.
  - ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::Break2Polarity***  
Specifies the TIM Break2 Input pin polarity. This parameter can be a value of ***TIM\_LL\_EC\_BREAK2\_POLARITY***This feature can be modified afterwards using unitary function ***LL\_TIM\_ConfigBRK2()***  
**Note:**This bit-field can not be modified as long as LOCK level 1 has been programmed.
  - ***uint32\_t LL\_TIM\_BDTR\_InitTypeDef::Break2Filter***  
Specifies the TIM Break2 Filter. This parameter can be a value of ***TIM\_LL\_EC\_BREAK2\_FILTER***This feature can be modified afterwards using unitary function ***LL\_TIM\_ConfigBRK2()***

**Note:**This bit-field can not be modified as long as LOCK level 1 has been programmed.

- **`uint32_t LL_TIM_BDTR_InitTypeDef::AutomaticOutput`**

Specifies whether the TIM Automatic Output feature is enabled or not. This parameter can be a value of `TIM_LL_EC_AUTOMATICOUTPUT_ENABLE`. This feature can be modified afterwards using unitary functions `LL_TIM_EnableAutomaticOutput()` or `LL_TIM_DisableAutomaticOutput()`.

**Note:**This bit-field can not be modified as long as LOCK level 1 has been programmed.

## 78.2 TIM Firmware driver API description

### 78.2.1 Detailed description of functions

#### LL\_TIM\_EnableCounter

Function name      **`_STATIC_INLINE void LL_TIM_EnableCounter (TIM_TypeDef * TIMx)`**

Function description      Enable timer counter.

Parameters      • **TIMx:** Timer instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR1 CEN LL\_TIM\_EnableCounter

#### LL\_TIM\_DisableCounter

Function name      **`_STATIC_INLINE void LL_TIM_DisableCounter (TIM_TypeDef * TIMx)`**

Function description      Disable timer counter.

Parameters      • **TIMx:** Timer instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR1 CEN LL\_TIM\_DisableCounter

#### LL\_TIM\_IsEnabledCounter

Function name      **`_STATIC_INLINE uint32_t LL_TIM_IsEnabledCounter (TIM_TypeDef * TIMx)`**

Function description      Indicates whether the timer counter is enabled.

Parameters      • **TIMx:** Timer instance

Return values      • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• CR1 CEN LL\_TIM\_IsEnabledCounter

**LL\_TIM\_EnableUpdateEvent**

events generate an update interrupt or DMA request if enabled: Counter overflow/underflowSetting the UG bitUpdate generation through the slave mode controller

- Update event source set to LL\_TIM\_UPDATESOURCE\_COUNTER: only counter overflow/underflow generates an update interrupt or DMA request if enabled.

Reference Manual to  
LL API cross  
reference:

- CR1 URS LL\_TIM\_SetUpdateSource

### **LL\_TIM\_GetUpdateSource**

Function name **`_STATIC_INLINE uint32_t LL_TIM_GetUpdateSource(  
TIM_TypeDef * TIMx)`**

Function description Get actual event update source.

Parameters • **TIMx:** Timer instance

Return values • **Returned:** value can be one of the following values:  
– LL\_TIM\_UPDATESOURCE\_REGULAR  
– LL\_TIM\_UPDATESOURCE\_COUNTER

Reference Manual to  
LL API cross  
reference:

- CR1 URS LL\_TIM\_GetUpdateSource

### **LL\_TIM\_SetOnePulseMode**

Function name **`_STATIC_INLINE void LL_TIM_SetOnePulseMode(  
TIM_TypeDef * TIMx, uint32_t OnePulseMode)`**

Function description Set one pulse mode (one shot v.s.

Parameters • **TIMx:** Timer instance  
• **OnePulseMode:** This parameter can be one of the following values:  
– LL\_TIM\_ONEPULSEMODE\_SINGLE  
– LL\_TIM\_ONEPULSEMODE\_REPETITIVE

Return values • **None**

Reference Manual to  
LL API cross  
reference:

- CR1 OPM LL\_TIM\_SetOnePulseMode

### **LL\_TIM\_GetOnePulseMode**

Function name **`_STATIC_INLINE uint32_t LL_TIM_GetOnePulseMode(  
TIM_TypeDef * TIMx)`**

Function description Get actual one pulse mode.

Parameters • **TIMx:** Timer instance

Return values • **Returned:** value can be one of the following values:  
– LL\_TIM\_ONEPULSEMODE\_SINGLE

- LL\_TIM\_ONEPULSEMODE\_REPEATITIVE

Reference Manual to  
LL API cross  
reference:

- CR1 OPM LL\_TIM\_SetOnePulseMode

### **LL\_TIM\_SetCounterMode**

Function name      **`_STATIC_INLINE void LL_TIM_SetCounterMode(  
(TIM_TypeDef * TIMx, uint32_t CounterMode)`**

Function description      Set the timer counter counting mode.

- Parameters
- **TIMx:** Timer instance
  - **CounterMode:** This parameter can be one of the following values:
    - LL\_TIM\_COUNTERMODE\_UP
    - LL\_TIM\_COUNTERMODE\_DOWN
    - LL\_TIM\_COUNTERMODE\_CENTER\_UP
    - LL\_TIM\_COUNTERMODE\_CENTER\_DOWN
    - LL\_TIM\_COUNTERMODE\_CENTER\_UP\_DOWN

- Return values
- **None**

Notes

- Macro  
`IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx)` can be used to check whether or not the counter mode selection feature is supported by a timer instance.

Reference Manual to  
LL API cross  
reference:

- CR1 CMS LL\_TIM\_SetCounterMode

### **LL\_TIM\_GetCounterMode**

Function name      **`_STATIC_INLINE uint32_t LL_TIM_GetCounterMode(  
(TIM_TypeDef * TIMx)`**

Function description      Get actual counter mode.

Parameters

- **TIMx:** Timer instance

- Return values
- **Returned:** value can be one of the following values:
    - LL\_TIM\_COUNTERMODE\_UP
    - LL\_TIM\_COUNTERMODE\_DOWN
    - LL\_TIM\_COUNTERMODE\_CENTER\_UP
    - LL\_TIM\_COUNTERMODE\_CENTER\_DOWN
    - LL\_TIM\_COUNTERMODE\_CENTER\_UP\_DOWN

Notes

- Macro  
`IS_TIM_COUNTER_MODE_SELECT_INSTANCE(TIMx)` can be used to check whether or not the counter mode selection feature is supported by a timer instance.

**LL\_TIM\_GetPrescaler**

Function name      **STATIC\_INLINE uint32\_t LL\_TIM\_GetPrescaler (TIM\_TypeDef \* TIMx)**

Function description      Get the prescaler value.

Parameters      • **TIMx:** Timer instance

Return values      • **Prescaler:** value between Min\_Data=0 and Max\_Data=65535

Reference Manual to  
LL API cross  
reference:  
• PSC PSC LL\_TIM\_GetPrescaler

**LL\_TIM\_SetAutoReload**

Function name      **STATIC\_INLINE void LL\_TIM\_SetAutoReload (TIM\_TypeDef \* TIMx, uint32\_t AutoReload)**

Function description      Set the auto-reload value.

Parameters      • **TIMx:** Timer instance  
• **AutoReload:** between Min\_Data=0 and Max\_Data=65535

Return values      • **None**

Notes      • The counter is blocked while the auto-reload value is null.  
• Macro IS\_TIM\_32B\_COUNTER\_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.  
• Helper macro \_\_LL\_TIM\_CALC\_ARR can be used to calculate the AutoReload parameter

Reference Manual to  
LL API cross  
reference:  
• ARR ARR LL\_TIM\_SetAutoReload

**LL\_TIM\_GetAutoReload**

Function name      **STATIC\_INLINE uint32\_t LL\_TIM\_GetAutoReload (TIM\_TypeDef \* TIMx)**

Function description      Get the auto-reload value.

Parameters      • **TIMx:** Timer instance

Return values      • **Auto-reload:** value

Notes      • Macro IS\_TIM\_32B\_COUNTER\_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.

**LL\_TIM\_DisableUIFRemap**

Function name      **\_\_STATIC\_INLINE void LL\_TIM\_DisableUIFRemap(  
TIM\_TypeDef \* TIMx)**

Function description      Disable update interrupt flag (UIF) remapping.

Parameters      • **TIMx:** Timer instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR1 UIFREMAP LL\_TIM\_DisableUIFRemap

**LL\_TIM\_CC\_EnablePreload**

Function name      **\_\_STATIC\_INLINE void LL\_TIM\_CC\_EnablePreload(  
TIM\_TypeDef \* TIMx)**

Function description      Enable the capture/compare control bits (CCxE, CCxNE and OCxM) preload.

Parameters      • **TIMx:** Timer instance

Return values      • **None**

Notes      • CCxE, CCxNE and OCxM bits are preloaded, after having been written, they are updated only when a commutation event (COM) occurs.  
• Only on channels that have a complementary output.  
• Macro IS\_TIM\_COMMUTATION\_EVENT\_INSTANCE(TIMx) can be used to check whether or not a timer instance is able to generate a commutation event.

Reference Manual to  
LL API cross  
reference:

## LL\_TIM\_OC\_GetPolarity

- Function name `_STATIC_INLINE uint32_t LL_TIM_OC_GetPolarity(  
 TIM_TypeDef * TIMx, uint32_t Channel)`
- Function description Get the polarity of an output channel.
- Parameters
- **TIMx:** Timer instance
  - **Channel:** This parameter can be one of the following values:
    - LL\_TIM\_CHANNEL\_CH1
    - LL\_TIM\_CHANNEL\_CH1N
    - LL\_TIM\_CHANNEL\_CH2
    - LL\_TIM\_CHANNEL\_CH2N
    - LL\_TIM\_CHANNEL\_CH3
    - LL\_TIM\_CHANNEL\_CH3N
    - LL\_TIM\_CHANNEL\_CH4
    - LL\_TIM\_CHANNEL\_CH5
    - LL\_TIM\_CHANNEL\_CH6
- Return values
- **Returned:** value can be one of the following values:
    - LL\_TIM\_OCPOLARITY\_HIGH
    - LL\_TIM\_OCPOLARITY\_LOW
- Notes
- CH5 and CH6 channels are not available for all F3 devices
- Reference Manual to LL API cross reference:
  - CCER CC1P LL\_TIM\_OC\_GetPolarity
  - CCER CC1NP LL\_TIM\_OC\_GetPolarity
  - CCER CC2P LL\_TIM\_OC\_GetPolarity

- Notes
- Macro IS\_TIM\_CC6\_INSTANCE(TIMx) can be used to check whether or not output channel 6 is supported by a timer instance. CCR6 CCR6 LL\_TIM\_OC\_SetCompareCH6
  - CH6 channel is not available for all F3 devices

### **LL\_TIM\_OC\_GetCompareCH1**

- Function name **STATIC\_INLINE uint32\_t LL\_TIM\_OC\_GetCompareCH1 (TIM\_TypeDef \* TIMx)**
- Function description Get compare value (TIMx\_CCR1) set for output channel 1.
- Parameters
- TIMx:** Timer instance
- Return values
- CompareValue:** (between Min\_Data=0 and Max\_Data=65535)
- Notes
- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
  - Macro IS\_TIM\_32B\_COUNTER\_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
  - Macro IS\_TIM\_CC1\_INSTANCE(TIMx) can be used to check whether or not output channel 1 is supported by a timer instance.

### **LL\_TIM\_OC\_GetCompareCH2**

- Function name **STATIC\_INLINE uint32\_t LL\_TIM\_OC\_GetCompareCH2 (TIM\_TypeDef \* TIMx)**
- Function description Get compare value (TIMx\_CCR2) set for output channel 2.
- Parameters
- TIMx:** Timer instance
- Return values
- CompareValue:** (between Min\_Data=0 and Max\_Data=65535)
- Notes
- In 32-bit timer implementations returned compare value can be between 0x00000000 and 0xFFFFFFFF.
  - Macro IS\_TIM\_32B\_COUNTER\_INSTANCE(TIMx) can be used to check whether or not a timer instance supports a 32 bits counter.
  - Macro IS\_TIM\_CC2\_INSTANCE(TIMx) can be used to check whether or not output channel 2 is supported by a timer instance.

## LL\_TIM\_IC\_SetActiveInput

#### Function name

```
STATIC_INLINE void LL_TIM_IC_SetActiveInput
(TIM_TypeDef * TIMx, uint32_t Channel, uint32_t
ICActiveInput)
```

#### Function description

Set the active input.

#### Parameters

- **TIMx:** Timer instance
- **Channel:** This parameter can be one of the following values:
  - LL\_TIM\_CHANNEL\_CH1
  - LL\_TIM\_CHANNEL\_CH2
  - LL\_TIM\_CHANNEL\_CH3
  - LL\_TIM\_CHANNEL\_CH4
- **ICActiveInput:** This parameter can be one of the following values:
  - LL\_TIM\_ACTIVEINPUT\_DIRECTTI
  - LL\_TIM\_ACTIVEINPUT\_INDIRECTTI
  - LL\_TIM\_ACTIVEINPUT\_TRC

#### Return values

- **None**

- Reference Manual to

supports external clock mode2.

Reference Manual to  
LL API cross  
reference:

- SMCR ECE LL\_TIM\_DisableExternalClock

### **LL\_TIM\_IsEnabledExternalClock**

Function name **\_STATIC\_INLINE uint32\_t LL\_TIM\_IsEnabledExternalClock  
(TIM\_TypeDef \* TIMx)**

Function description Indicate whether external clock mode 2 is enabled.

Parameters

- **TIMx:** Timer instance

Return values

- **State:** of bit (1 or 0).

Notes

- Macro  
`IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx)`  
can be used to check whether or not a timer instance  
supports external clock mode2.

Reference Manual to  
LL API cross  
reference:

- SMCR ECE LL\_TIM\_IsEnabledExternalClock

### **LL\_TIM\_SetClockSource**

Function name **\_STATIC\_INLINE void LL\_TIM\_SetClockSource  
(TIM\_TypeDef \* TIMx, uint32\_t ClockSource)**

Function description Set the clock source of the counter clock.

Parameters

- **TIMx:** Timer instance
- **ClockSource:** This parameter can be one of the following values:
  - `LL_TIM_CLOCKSOURCE_INTERNAL`
  - `LL_TIM_CLOCKSOURCE_EXT_MODE1`
  - `LL_TIM_CLOCKSOURCE_EXT_MODE2`

Return values

- **None**

Notes

- when selected clock source is external clock mode 1, the timer input the external clock is applied is selected by calling the `LL_TIM_SetTriggerInput()` function. This timer input must be configured by calling the `LL_TIM_IC_Config()` function.
- Macro  
`IS_TIM_CLOCKSOURCE_ETRMODE1_INSTANCE(TIMx)`  
can be used to check whether or not a timer instance  
supports external clock mode1.
- Macro  
`IS_TIM_CLOCKSOURCE_ETRMODE2_INSTANCE(TIMx)`  
can be used to check whether or not a timer instance  
supports external clock mode2.

### LL\_TIM\_ConfigBRK

|                      |                                                                                                                                                             |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <code>__STATIC_INLINE void LL_TIM_ConfigBRK (TIM_TypeDef *<br/>TIMx, uint32_t BreakPolarity, uint32_t BreakFilter)</code>                                   |
| Function description | Configure the break input.                                                                                                                                  |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>TIMx:</b> Timer instance</li> <li>• <b>BreakPolarity:</b> This parameter can be one of the following</li> </ul> |

values:

- LL\_TIM\_BREAK\_POLARITY\_LOW
- LL\_TIM\_BREAK\_POLARITY\_HIGH

- **BreakFilter:** This parameter can be one of the following values:

- LL\_TIM\_BREAK\_FILTER\_FDIV1
- LL\_TIM\_BREAK\_FILTER\_FDIV1\_N2
- LL\_TIM\_BREAK\_FILTER\_FDIV1\_N4
- LL\_TIM\_BREAK\_FILTER\_FDIV1\_N8
- LL\_TIM\_BREAK\_FILTER\_FDIV2\_N6
- LL\_TIM\_BREAK\_FILTER\_FDIV2\_N8
- LL\_TIM\_BREAK\_FILTER\_FDIV4\_N6
- LL\_TIM\_BREAK\_FILTER\_FDIV4\_N8
- LL\_TIM\_BREAK\_FILTER\_FDIV8\_N6
- LL\_TIM\_BREAK\_FILTER\_FDIV8\_N8
- LL\_TIM\_BREAK\_FILTER\_FDIV16\_N5
- LL\_TIM\_BREAK\_FILTER\_FDIV16\_N6
- LL\_TIM\_BREAK\_FILTER\_FDIV16\_N8
- LL\_TIM\_BREAK\_FILTER\_FDIV32\_N5
- LL\_TIM\_BREAK\_FILTER\_FDIV32\_N6
- LL\_TIM\_BREAK\_FILTER\_FDIV32\_N8

#### Return values

- **None**

#### Notes

- Macro IS\_TIM\_BREAK\_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a break input.

## LL\_TIM\_EnableBRK2

Function name **`_STATIC_INLINE void LL_TIM_EnableBRK2 (TIM_TypeDef *  
TIMx)`**

#### Function description

Enable the break 2 function.

#### Parameters

- **TIMx:** Timer instance

#### Return values

- **None**

#### Notes

- Macro IS\_TIM\_BKIN2\_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

#### Reference Manual to LL API cross reference:

- BDTR BK2E LL\_TIM\_EnableBRK2

## LL\_TIM\_DisableBRK2

Function name **`_STATIC_INLINE void LL_TIM_DisableBRK2 (TIM_TypeDef *  
TIMx)`**

#### Function description

Disable the break 2 function.

#### Parameters

- **TIMx:** Timer instance

---

**LL\_TIM\_SetRemap****Function name**

`__STATIC_INLINE void LL_TIM_SetRemap (TIM_TypeDef *  
TIMx, uint32_t Remap)`

**Function description**

Remap TIM inputs (input channel, internal/external triggers).

**Parameters**

- **TIMx:** Timer instance
- **Remap:** Remap params depends on the TIMx. Description available only in CHM version of the User Manual (not in .pdf). Otherwise see Reference Manual description of OR registers.

**Return values**

- **None**

**Notes**

- Macro IS\_TIM\_REMAP\_INSTANCE(TIMx) can be used to check whether or not some timer inputs can be remapped.

**LL\_TIM\_SetOCRefClearInputSource****Function name**

`__STATIC_INLINE void LL_TIM_SetOCRefClearInputSource  
(TIM_TypeDef * TIMx, uint32_t OCRefClearInputSource)`

**Function description**

Set the OCREF clear input source.

**Parameters**

- **TIMx:** Timer instance
- **OCRefClearInputSource:** This parameter can be one of the

**LL\_TIM\_IsActiveFlag\_COM**

Function name `STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_COM(TIM_TypeDef * TIMx)`

Function description Indicate whether commutation interrupt flag (COMIF) is set (commutation interrupt is pending).

Parameters • **TIMx:** Timer instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
SR COMIF LL\_TIM\_IsActiveFlag\_COM

**LL\_TIM\_ClearFlag\_TRIG**

Function name `STATIC_INLINE void LL_TIM_ClearFlag_TRIG(TIM_TypeDef * TIMx)`

Function description Clear the trigger interrupt flag (TIF).

Parameters • **TIMx:** Timer instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
SR TIF LL\_TIM\_ClearFlag\_TRIG

**LL\_TIM\_IsActiveFlag\_TRIG**

Function name `STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_TRIG(TIM_TypeDef * TIMx)`

Function description Indicate whether trigger interrupt flag (TIF) is set (trigger interrupt is pending).

Parameters • **TIMx:** Timer instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
SR TIF LL\_TIM\_IsActiveFlag\_TRIG

**LL\_TIM\_ClearFlag\_BRK**

Function name `STATIC_INLINE void LL_TIM_ClearFlag_BRK(TIM_TypeDef * TIMx)`

Function description Clear the break interrupt flag (BIF).

Parameters • **TIMx:** Timer instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
SR BIF LL\_TIM\_ClearFlag\_BRK

**LL\_TIM\_IsActiveFlag\_BRK**

**LL\_TIM\_IsActiveFlag\_CC3OVR**

Function name **`_STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC3OVR  
(TIM_TypeDef * TIMx)`**

Function description Indicate whether Capture/Compare 3 over-capture interrupt flag (CC3OF) is set (Capture/Compare 3 over-capture interrupt is pending).

Parameters • **TIMx:** Timer instance

Return values • **State:** of bit (1 or 0).

Reference Manual to SR CC3OF LL\_TIM\_IsActiveFlag\_CC3OVR  
LL API cross reference:

**LL\_TIM\_ClearFlag\_CC4OVR**

Function name **`_STATIC_INLINE void LL_TIM_ClearFlag_CC4OVR  
(TIM_TypeDef * TIMx)`**

Function description Clear the Capture/Compare 4 over-capture interrupt flag (CC4OF).

Parameters • **TIMx:** Timer instance

Return values • **None**

Reference Manual to SR CC4OF LL\_TIM\_ClearFlag\_CC4OVR  
LL API cross reference:

**LL\_TIM\_IsActiveFlag\_CC4OVR**

Function name **`_STATIC_INLINE uint32_t LL_TIM_IsActiveFlag_CC4OVR  
(TIM_TypeDef * TIMx)`**

Function description Indicate whether Capture/Compare 4 over-capture interrupt flag (CC4OF) is set (Capture/Compare 4 over-capture interrupt is pending).

Parameters • **TIMx:** Timer instance

Return values • **State:** of bit (1 or 0).

Reference Manual to SR CC4OF LL\_TIM\_IsActiveFlag\_CC4OVR  
LL API cross reference:

**LL\_TIM\_EnableIT\_UPDATE**

Function name **`_STATIC_INLINE void LL_TIM_EnableIT_UPDATE  
(TIM_TypeDef * TIMx)`**

Function description Enable update interrupt (UIE).

Parameters • **TIMx:** Timer instance

Return values • **None**

Reference Manual to DIER UIE LL\_TIM\_EnableIT\_UPDATE  
LL API cross

reference:

### LL\_TIM\_DisableIT\_UPDATE

Function name **`__STATIC_INLINE void LL_TIM_DisableIT_UPDATE (TIM_TypeDef * TIMx)`**

Function description Disable update interrupt (UIE).

Parameters • **TIMx:** Timer instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
[DIER UIE LL\\_TIM\\_DisableIT\\_UPDATE](#)

### LL\_TIM\_IsEnabledIT\_UPDATE

Function name **`__STATIC_INLINE uint32_t LL_TIM_IsEnabledIT_UPDATE (TIM_TypeDef * TIMx)`**

Function description Indicates whether the update interrupt (UIE) is enabled.

Parameters • **TIMx:** Timer instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
[DIER UIE LL\\_TIM\\_IsEnabledIT\\_UPDATE](#)

### LL\_TIM\_EnableIT\_CC1

Function name **`__STATIC_INLINE void LL_TIM_EnableIT_CC1 (TIM_TypeDef * TIMx)`**

Function description Enable capture/compare 1 interrupt (CC1IE).

Parameters • **TIMx:** Timer instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
[DIER CC1IE LL\\_TIM\\_EnableIT\\_CC1](#)

### LL\_TIM\_DisableIT\_CC1

Function name **`__STATIC_INLINE void LL_TIM_DisableIT_CC1 (TIM_TypeDef * TIMx)`**

Function description Disable capture/compare 1 interrupt (CC1IE).

Parameters • **TIMx:** Timer instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
[DIER CC1IE LL\\_TIM\\_DisableIT\\_CC1](#)

- check whether or not a timer instance provides a break input.
- Macro IS\_TIM\_BKIN2\_INSTANCE(TIMx) can be used to check whether or not a timer instance provides a second break input.

## 78.3 TIM Firmware driver defines

### 78.3.1 TIM

#### *Active Input Selection*

LL\_TIM\_ACTIVEINPUT\_DIRECTTI ICx is mapped on TIx

LL\_TIM\_ACTIVEINPUT\_INDIRECTTI ICx is mapped on Tly

LL\_TIM\_ACTIVEINPUT\_TRC ICx is mapped on TRC

#### *Automatic output enable*

LL\_TIM\_AUTOMATICOUTPUT\_DISABLE MOE can be set only by software

LL\_TIM\_AUTOMATICOUTPUT\_ENABLE MOE can be set by software or automatically at the next update event

#### *Break2 Enable*

LL\_TIM\_BREAK2\_DISABLE Break2 function disabled

LL\_TIM\_BREAK2\_ENABLE Break2 function enabled

#### *BREAK2 FILTER*

LL\_TIM\_BREAK2\_FILTER\_FDIV1 No filter, BRK acts asynchronously

LL\_TIM\_BREAK2\_FILTER\_FDIV1\_N2 fSAMPLING=fCK\_INT, N=2

LL\_TIM\_BREAK2\_FILTER\_FDIV1\_N4 fSAMPLING=fCK\_INT, N=4

LL\_TIM\_BREAK2\_FILTER\_FDIV1\_N8 fSAMPLING=fCK\_INT, N=8

LL\_TIM\_BREAK2\_FILTER\_FDIV2\_N6 fSAMPLING=fDTS/2, N=6

LL\_TIM\_BREAK2\_FILTER\_FDIV2\_N8 fSAMPLING=fDTS/2, N=8

LL\_TIM\_BREAK2\_FILTER\_FDIV4\_N6 fSAMPLING=fDTS/4, N=6

LL\_TIM\_BREAK2\_FILTER\_FDIV4\_N8 fSAMPLING=fDTS/4, N=8

LL\_TIM\_BREAK2\_FILTER\_FDIV8\_N6 fSAMPLING=fDTS/8, N=6

LL\_TIM\_BREAK2\_FILTER\_FDIV8\_N8 fSAMPLING=fDTS/8, N=8

LL\_TIM\_BREAK2\_FILTER\_FDIV16\_N5 fSAMPLING=fDTS/16, N=5

LL\_TIM\_BREAK2\_FILTER\_FDIV16\_N6 fSAMPLING=fDTS/16, N=6

LL\_TIM\_BREAK2\_FILTER\_FDIV16\_N8 fSAMPLING=fDTS/16, N=8

LL\_TIM\_BREAK2\_FILTER\_FDIV32\_N5 fSAMPLING=fDTS/32, N=5

LL\_TIM\_BREAK2\_FILTER\_FDIV32\_N6 fSAMPLING=fDTS/32, N=6

LL\_TIM\_BREAK2\_FILTER\_FDIV32\_N8 fSAMPLING=fDTS/32, N=8

#### *BREAK2 POLARITY*

LL\_TIM\_BREAK2\_POLARITY\_LOW Break input BRK2 is active low

`LL_TIM_BREAK2_POLARITY_HIGH` Break input BRK2 is active high

***Break Enable***

`LL_TIM_BREAK_DISABLE` Break function disabled

`LL_TIM_BREAK_ENABLE` Break function enabled

***break filter***

`LL_TIM_BREAK_FILTER_FDIV1` No filter, BRK acts asynchronously

`LL_TIM_BREAK_FILTER_FDIV1_N2` fSAMPLING=fCK\_INT, N=2

`LL_TIM_BREAK_FILTER_FDIV1_N4` fSAMPLING=fCK\_INT, N=4

`LL_TIM_BREAK_FILTER_FDIV1_N8` fSAMPLING=fCK\_INT, N=8

`LL_TIM_BREAK_FILTER_FDIV2_N6` fSAMPLING=fDTS/2, N=6

`LL_TIM_BREAK_FILTER_FDIV2_N8` fSAMPLING=fDTS/2, N=8

`LL_TIM_BREAK_FILTER_FDIV4_N6` fSAMPLING=fDTS/4, N=6

`LL_TIM_BREAK_FILTER_FDIV4_N8` fSAMPLING=fDTS/4, N=8

`LL_TIM_BREAK_FILTER_FDIV8_N6` fSAMPLING=fDTS/8, N=6

`LL_TIM_BREAK_FILTER_FDIV8_N8` fSAMPLING=fDTS/8, N=8

`LL_TIM_BREAK_FILTER_FDIV16_N5` fSAMPLING=fDTS/16, N=5

`LL_TIM_BREAK_FILTER_FDIV16_N6` fSAMPLING=fDTS/16, N=6

`LL_TIM_BREAK_FILTER_FDIV16_N8` fSAMPLING=fDTS/16, N=8

`LL_TIM_BREAK_FILTER_FDIV32_N5` fSAMPLING=fDTS/32, N=5

`LL_TIM_BREAK_FILTER_FDIV32_N6` fSAMPLING=fDTS/32, N=6

`LL_TIM_BREAK_FILTER_FDIV32_N8` fSAMPLING=fDTS/32, N=8

***break polarity***

`LL_TIM_BREAK_POLARITY_LOW` Break input BRK is active low

`LL_TIM_BREAK_POLARITY_HIGH` Break input BRK is active high

***Capture Compare DMA Request***

`LL_TIM_CCDMAREQUEST_CC` CCx DMA request sent when CCx event occurs

`LL_TIM_CCDMAREQUEST_UPDATE` CCx DMA requests sent when update event occurs

***Capture Compare Update Source***

`LL_TIM_CCUPDATESOURCE_COMG_ONLY` Capture/compare control bits are updated by setting the COMG bit only

`LL_TIM_CCUPDATESOURCE_COMG_AND_TRGI` Capture/compare control bits are updated by setting the COMG bit or when a rising edge occurs on trigger input (TRGI)

***Channel***

`LL_TIM_CHANNEL_CH1` Timer input/output channel 1

|                     |                                      |
|---------------------|--------------------------------------|
| LL_TIM_CHANNEL_CH1N | Timer complementary output channel 1 |
| LL_TIM_CHANNEL_CH2  | Timer input/output channel 2         |
| LL_TIM_CHANNEL_CH2N | Timer complementary output channel 2 |
| LL_TIM_CHANNEL_CH3  | Timer input/output channel 3         |
| LL_TIM_CHANNEL_CH3N | Timer complementary output channel 3 |
| LL_TIM_CHANNEL_CH4  | Timer input/output channel 4         |
| LL_TIM_CHANNEL_CH5  | Timer output channel 5               |
| LL_TIM_CHANNEL_CH6  | Timer output channel 6               |

#### **Clock Division**

|                           |                |
|---------------------------|----------------|
| LL_TIM_CLOCKDIVISION_DIV1 | tDTS=tCK_INT   |
| LL_TIM_CLOCKDIVISION_DIV2 | tDTS=2*tCK_INT |
| LL_TIM_CLOCKDIVISION_DIV4 | tDTS=4*tCK_INT |

#### **Clock Source**

|                              |                                                                                 |
|------------------------------|---------------------------------------------------------------------------------|
| LL_TIM_CLOCKSOURCE_INTERNAL  | The timer is clocked by the internal clock provided from the RCC                |
| LL_TIM_CLOCKSOURCE_EXT_MODE1 | Counter counts at each rising or falling edge on a selected input               |
| LL_TIM_CLOCKSOURCE_EXT_MODE2 | Counter counts at each rising or falling edge on the external trigger input ETR |

#### **Counter Direction**

|                              |                           |
|------------------------------|---------------------------|
| LL_TIM_COUNTERDIRECTION_UP   | Timer counter counts up   |
| LL_TIM_COUNTERDIRECTION_DOWN | Timer counter counts down |

#### **Counter Mode**

|                                   |                                                                                                                                                       |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
| LL_TIM_COUNTERMODE_UP             | Counter used as upcounter                                                                                                                             |
| LL_TIM_COUNTERMODE_DOWN           | Counter used as downcounter                                                                                                                           |
| LL_TIM_COUNTERMODE_CENTER_UP      | The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting down.       |
| LL_TIM_COUNTERMODE_CENTER_DOWN    | The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up          |
| LL_TIM_COUNTERMODE_CENTER_UP_DOWN | The counter counts up and down alternatively. Output compare interrupt flags of output channels are set only when the counter is counting up or down. |

#### **DMA Burst Base Address**

|                              |                                                         |
|------------------------------|---------------------------------------------------------|
| LL_TIM_DMABURST_BASEADDR_CR1 | TIMx_CR1 register is the DMA base address for DMA burst |
|------------------------------|---------------------------------------------------------|

|                                |                                                           |
|--------------------------------|-----------------------------------------------------------|
| LL_TIM_DMABURST_BASEADDR_CR2   | TIMx_CR2 register is the DMA base address for DMA burst   |
| LL_TIM_DMABURST_BASEADDR_SMCR  | TIMx_SMCR register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_DIER  | TIMx_DIER register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_SR    | TIMx_SR register is the DMA base address for DMA burst    |
| LL_TIM_DMABURST_BASEADDR_EGR   | TIMx_EGR register is the DMA base address for DMA burst   |
| LL_TIM_DMABURST_BASEADDR_CCMR1 | TIMx_CCMR1 register is the DMA base address for DMA burst |
| LL_TIM_DMABURST_BASEADDR_CCMR2 | TIMx_CCMR2 register is the DMA base address for DMA burst |
| LL_TIM_DMABURST_BASEADDR_CCER  | TIMx_CCER register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_CNT   | TIMx_CNT register is the DMA base address for DMA burst   |
| LL_TIM_DMABURST_BASEADDR_PSC   | TIMx_PSC register is the DMA base address for DMA burst   |
| LL_TIM_DMABURST_BASEADDR_ARR   | TIMx_ARR register is the DMA base address for DMA burst   |
| LL_TIM_DMABURST_BASEADDR_RCR   | TIMx_RCR register is the DMA base address for DMA burst   |
| LL_TIM_DMABURST_BASEADDR_CCR1  | TIMx_CCR1 register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_CCR2  | TIMx_CCR2 register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_CCR3  | TIMx_CCR3 register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_CCR4  | TIMx_CCR4 register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_BDTR  | TIMx_BDTR register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_CCMR3 | TIMx_CCMR3 register is the DMA base address for DMA burst |
| LL_TIM_DMABURST_BASEADDR_CCR5  | TIMx_CCR5 register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_CCR6  | TIMx_CCR6 register is the DMA base address for DMA burst  |
| LL_TIM_DMABURST_BASEADDR_OR    | TIMx_OR register is the DMA base address for DMA burst    |

**DMA Burst Length**

LL\_TIM\_DMABURST\_LENGTH\_1TRANSFER Transfer is done to 1 register starting

|                                    |                                                                           |
|------------------------------------|---------------------------------------------------------------------------|
| LL_TIM_DMABURST_LENGTH_2TRANSFERS  | Transfer is done to 2 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_3TRANSFERS  | Transfer is done to 3 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_4TRANSFERS  | Transfer is done to 4 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_5TRANSFERS  | Transfer is done to 5 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_6TRANSFERS  | Transfer is done to 6 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_7TRANSFERS  | Transfer is done to 7 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_8TRANSFERS  | Transfer is done to 8 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_9TRANSFERS  | Transfer is done to 9 registers starting from the DMA burst base address  |
| LL_TIM_DMABURST_LENGTH_10TRANSFERS | Transfer is done to 10 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_11TRANSFERS | Transfer is done to 11 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_12TRANSFERS | Transfer is done to 12 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_13TRANSFERS | Transfer is done to 13 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_14TRANSFERS | Transfer is done to 14 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_15TRANSFERS | Transfer is done to 15 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_16TRANSFERS | Transfer is done to 16 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_17TRANSFERS | Transfer is done to 17 registers starting from the DMA burst base address |
| LL_TIM_DMABURST_LENGTH_18TRANSFERS | Transfer is done to 18 registers starting from the DMA burst base address |

**Encoder Mode**

|                            |                                                                                                                     |
|----------------------------|---------------------------------------------------------------------------------------------------------------------|
| LL_TIM_ENCODERMODE_X2_TI1  | Encoder mode 1 - Counter counts up/down on TI2FP2 edge depending on TI1FP1 level                                    |
| LL_TIM_ENCODERMODE_X2_TI2  | Encoder mode 2 - Counter counts up/down on TI1FP1 edge depending on TI2FP2 level                                    |
| LL_TIM_ENCODERMODE_X4_TI12 | Encoder mode 3 - Counter counts up/down on both TI1FP1 and TI2FP2 edges depending on the level of the other input I |

***External Trigger Filter***

|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LL_TIM_OCMODE_FROZEN          | The comparison between the output compare register TIMx_CCRy and the counter TIMx_CNT has no effect on the output channel level                                   |
| LL_TIM_OCMODE_ACTIVE          | OCyREF is forced high on compare match                                                                                                                            |
| LL_TIM_OCMODE_INACTIVE        | OCyREF is forced low on compare match                                                                                                                             |
| LL_TIM_OCMODE_TOGGLE          | OCyREF toggles on compare match                                                                                                                                   |
| LL_TIM_OCMODE_FORCED_INACTIVE | OCyREF is forced low                                                                                                                                              |
| LL_TIM_OCMODE_FORCED_ACTIVE   | OCyREF is forced high                                                                                                                                             |
| LL_TIM_OCMODE_PWM1            | In upcounting, channel y is active as long as TIMx_CNT<TIMx_CCRy else inactive. In downcounting, channel y is inactive as long as TIMx_CNT>TIMx_CCRy else active. |

|                               |                                                                                                                                                                  |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LL_TIM_OCMODE_PWM2            | In upcounting, channel y is inactive as long as TIMx_CNT<TIMx_CCRy else active. In downcounting, channel y is active as long as TIMx_CNT>TIMx_CCRy else inactive |
| LL_TIM_OCMODE_RETRIG_OPM1     | Retriggerable OPM mode 1                                                                                                                                         |
| LL_TIM_OCMODE_RETRIG_OPM2     | Retriggerable OPM mode 2                                                                                                                                         |
| LL_TIM_OCMODE_COMBINED_PWM1   | Combined PWM mode 1                                                                                                                                              |
| LL_TIM_OCMODE_COMBINED_PWM2   | Combined PWM mode 2                                                                                                                                              |
| LL_TIM_OCMODE_ASSYMETRIC_PWM1 | Asymmetric PWM mode 1                                                                                                                                            |
| LL_TIM_OCMODE_ASSYMETRIC_PWM2 | Asymmetric PWM mode 2                                                                                                                                            |

#### ***Output Configuration Polarity***

|                        |                 |
|------------------------|-----------------|
| LL_TIM_OCPOLARITY_HIGH | OCx active high |
| LL_TIM_OCPOLARITY_LOW  | OCx active low  |

#### ***OCREF clear input selection***

|                                |                                                   |
|--------------------------------|---------------------------------------------------|
| LL_TIM_OCREF_CLR_INT_OCREF_CLR | OCREF_CLR_INT is connected to the OCREF_CLR input |
| LL_TIM_OCREF_CLR_INT_ETR       | OCREF_CLR_INT is connected to ETRF                |

#### ***Output Configuration State***

|                        |                                                      |
|------------------------|------------------------------------------------------|
| LL_TIM_OCSTATE_DISABLE | OCx is not active                                    |
| LL_TIM_OCSTATE_ENABLE  | OCx signal is output on the corresponding output pin |

#### ***One Pulse Mode***

|                               |                                                 |
|-------------------------------|-------------------------------------------------|
| LL_TIM_ONEPULSEMODE_SINGLE    | Counter is not stopped at update event          |
| LL_TIM_ONEPULSEMODE_REPEATIVE | Counter stops counting at the next update event |

#### ***OSSI***

|                     |                                                                                                                               |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------|
| LL_TIM_OSSI_DISABLE | When inactive, OCx/OCxN outputs are disabled                                                                                  |
| LL_TIM_OSSI_ENABLE  | When inactive, OCx/OCxN outputs are first forced with their inactive level then forced to their idle level after the deadtime |

#### ***OSSR***

|                     |                                                                                                    |
|---------------------|----------------------------------------------------------------------------------------------------|
| LL_TIM_OSSR_DISABLE | When inactive, OCx/OCxN outputs are disabled                                                       |
| LL_TIM_OSSR_ENABLE  | When inactive, OCx/OCxN outputs are enabled with their inactive level as soon as CCxE=1 or CCxNE=1 |

#### ***Slave Mode***

|                           |                                                                                         |
|---------------------------|-----------------------------------------------------------------------------------------|
| LL_TIM_SLAVEMODE_DISABLED | Slave mode disabled                                                                     |
| LL_TIM_SLAVEMODE_RESET    | Reset Mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter |
| LL_TIM_SLAVEMODE_GATED    | Gated Mode - The counter clock is enabled when the trigger input (TRGI) is high         |

|                                        |                                                                                                                                                                         |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LL_TIM_SLAVEMODE_TRIGGER               | Trigger Mode - The counter starts at a rising edge of the trigger TRGI                                                                                                  |
| LL_TIM_SLAVEMODE_COMBINED_RESETTRIGGER | Combined reset + trigger mode - Rising edge of the selected trigger input (TRGI) reinitializes the counter, generates an update of the registers and starts the counter |

***TIM16 External Input Ch1 Remap***

|                             |                                                            |
|-----------------------------|------------------------------------------------------------|
| LL_TIM_TIM16_TI1_RMP_GPIO   | TIM16 input capture 1 is connected to GPIO                 |
| LL_TIM_TIM16_TI1_RMP_RTC    | TIM16 input capture 1 is connected to RTC wakeup interrupt |
| LL_TIM_TIM16_TI1_RMP_HSE_32 | TIM16 input capture 1 is connected to HSE/32 clock         |
| LL_TIM_TIM16_TI1_RMP_MCO    | TIM16 input capture 1 is connected to MCO                  |

***TIM1 External Trigger ADC1 Remap***

|                               |                                                     |
|-------------------------------|-----------------------------------------------------|
| LL_TIM_TIM1_ETR_ADC1_RMP_NC   | TIM1_ETR is not connected to ADC1 analog watchdog x |
| LL_TIM_TIM1_ETR_ADC1_RMP_AWD1 | TIM1_ETR is connected to ADC1 analog watchdog 1     |
| LL_TIM_TIM1_ETR_ADC1_RMP_AWD2 | TIM1_ETR is connected to ADC1 analog watchdog 2     |
| LL_TIM_TIM1_ETR_ADC1_RMP_AWD3 | TIM1_ETR is connected to ADC1 analog watchdog 3     |

***TIM1 External Trigger ADC4 Remap***

|                               |                                                     |
|-------------------------------|-----------------------------------------------------|
| LL_TIM_TIM1_ETR_ADC4_RMP_NC   | TIM1_ETR is not connected to ADC4 analog watchdog x |
| LL_TIM_TIM1_ETR_ADC4_RMP_AWD1 | TIM1_ETR is connected to ADC4 analog watchdog 1     |
| LL_TIM_TIM1_ETR_ADC4_RMP_AWD2 | TIM1_ETR is connected to ADC4 analog watchdog 2     |
| LL_TIM_TIM1_ETR_ADC4_RMP_AWD3 | TIM1_ETR is connected to ADC4 analog watchdog 3     |

***TIM8 External Trigger ADC2 Remap***

|                               |                                                     |
|-------------------------------|-----------------------------------------------------|
| LL_TIM_TIM8_ETR_ADC2_RMP_NC   | TIM8_ETR is not connected to ADC2 analog watchdog x |
| LL_TIM_TIM8_ETR_ADC2_RMP_AWD1 | TIM8_ETR is connected to ADC2 analog watchdog       |
| LL_TIM_TIM8_ETR_ADC2_RMP_AWD2 | TIM8_ETR is connected to ADC2 analog watchdog 2     |
| LL_TIM_TIM8_ETR_ADC2_RMP_AWD3 | TIM8_ETR is connected to ADC2 analog watchdog 3     |

***TIM8 External Trigger ADC3 Remap***

|                               |                                                     |
|-------------------------------|-----------------------------------------------------|
| LL_TIM_TIM8_ETR_ADC3_RMP_NC   | TIM8_ETR is not connected to ADC3 analog watchdog x |
| LL_TIM_TIM8_ETR_ADC3_RMP_AWD1 | TIM8_ETR is connected to ADC3 analog watchdog 1     |
| LL_TIM_TIM8_ETR_ADC3_RMP_AWD2 | TIM8_ETR is connected to ADC3 analog watchdog 2     |
| LL_TIM_TIM8_ETR_ADC3_RMP_AWD3 | TIM8_ETR is connected to ADC3 analog watchdog 3     |

***Trigger Output***

|                    |                                                             |
|--------------------|-------------------------------------------------------------|
| LL_TIM_TRGO_RESET  | UG bit from the TIMx_EGR register is used as trigger output |
| LL_TIM_TRGO_ENABLE | Counter Enable signal (CNT_EN) is used as trigger output    |
| LL_TIM_TRGO_UPDATE | Update event is used as trigger output                      |
| LL_TIM_TRGO_CC1IF  | CC1 capture or a compare match is used as trigger output    |
| LL_TIM_TRGO_OC1REF | OC1REF signal is used as trigger output                     |
| LL_TIM_TRGO_OC2REF | OC2REF signal is used as trigger output                     |
| LL_TIM_TRGO_OC3REF | OC3REF signal is used as trigger output                     |
| LL_TIM_TRGO_OC4REF | OC4REF signal is used as trigger output                     |

***Trigger Output 2***

|                                |                                                               |
|--------------------------------|---------------------------------------------------------------|
| LL_TIM_TRGO2_RESET             | UG bit from the TIMx_EGR register is used as trigger output 2 |
| LL_TIM_TRGO2_ENABLE            | Counter Enable signal (CNT_EN) is used as trigger output 2    |
| LL_TIM_TRGO2_UPDATE            | Update event is used as trigger output 2                      |
| LL_TIM_TRGO2_CC1F              | CC1 capture or a compare match is used as trigger output 2    |
| LL_TIM_TRGO2_OC1               | OC1REF signal is used as trigger output 2                     |
| LL_TIM_TRGO2_OC2               | OC2REF signal is used as trigger output 2                     |
| LL_TIM_TRGO2_OC3               | OC3REF signal is used as trigger output 2                     |
| LL_TIM_TRGO2_OC4               | OC4REF signal is used as trigger output 2                     |
| LL_TIM_TRGO2_OC5               | OC5REF signal is used as trigger output 2                     |
| LL_TIM_TRGO2_OC6               | OC6REF signal is used as trigger output 2                     |
| LL_TIM_TRGO2_OC4_RISINGFALLING | OC4REF rising or falling edges are used as trigger output 2   |
| LL_TIM_TRGO2_OC6_RISINGFALLING | OC6REF rising or falling edges are used                       |

|                                     |                                                                    |
|-------------------------------------|--------------------------------------------------------------------|
|                                     | as trigger output 2                                                |
| LL_TIM_TRGO2_OC4_RISING_OC6_RISING  | OC4REF or OC6REF rising edges are used as trigger output 2         |
| LL_TIM_TRGO2_OC4_RISING_OC6_FALLING | OC4REF rising or OC6REF falling edges are used as trigger output 2 |
| LL_TIM_TRGO2_OC5_RISING_OC6_RISING  | OC5REF or OC6REF rising edges are used as trigger output 2         |
| LL_TIM_TRGO2_OC5_RISING_OC6_FALLING | OC5REF rising or OC6REF falling edges are used as trigger output 2 |

**Trigger Selection**

|                   |                                                           |
|-------------------|-----------------------------------------------------------|
| LL_TIM_TS_ITR0    | Internal Trigger 0 (ITR0) is used as trigger input        |
| LL_TIM_TS_ITR1    | Internal Trigger 1 (ITR1) is used as trigger input        |
| LL_TIM_TS_ITR2    | Internal Trigger 2 (ITR2) is used as trigger input        |
| LL_TIM_TS_ITR3    | Internal Trigger 3 (ITR3) is used as trigger input        |
| LL_TIM_TS_TI1F_ED | TI1 Edge Detector (TI1F_ED) is used as trigger input      |
| LL_TIM_TS_TI1FP1  | Filtered Timer Input 1 (TI1FP1) is used as trigger input  |
| LL_TIM_TS_TI2FP2  | Filtered Timer Input 2 (TI12P2) is used as trigger input  |
| LL_TIM_TS_ETRF    | Filtered external Trigger (ETRF) is used as trigger input |

**Update Source**

|                             |                                                                                                                                   |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| LL_TIM_UPDATESOURCE_REGULAR | Counter overflow/underflow, Setting the UG bit or Update generation through the slave mode controller generates an update request |
| LL_TIM_UPDATESOURCE_COUNTER | Only counter overflow/underflow generates an update request                                                                       |

**Parameters:**

- `__TIMCLK__`: timer input clock frequency (in Hz)
- `__CKD__`: This parameter can be one of the following values:
  - `LL_TIM_CLOCKDIVISION_DIV1`
  - `LL_TIM_CLOCKDIVISION_DIV2`
  - `LL_TIM_CLOCKDIVISION_DIV4`
- `__DT__`: deadtime duration (in ns)

**Return value:**

- `DTG[0:7]`

**Notes:**

- ex: `__LL_TIM_CALC_DEADTIME (80000000, LL_TIM_GetClockDivision (), 120);`

[\\_\\_LL\\_TIM\\_CALC\\_PSC](#)**Description:**

- `LL_HELPER` macro calculating the prescaler value to achieve the required counter clock frequency.

**Parameters:**

- `__TIMCLK__`: timer input clock frequency (in Hz)
- `__CNTCLK__`: counter clock frequency (in Hz)

**Return value:**

- Prescaler: value (between `Min_Data=0` and `Max_Data=65535`)

**Notes:**

- ex: `__LL_TIM_CALC_PSC (80000000, 1000000);`

[\\_\\_LL\\_TIM\\_CALC\\_ARR](#)**Description:**

- `LL_HELPER` macro calculating the auto-reload value to achieve the required output signal frequency.

**Parameters:**

- `__TIMCLK__`: timer input clock frequency (in Hz)
- `__PSC__`: prescaler
- `__FREQ__`: output signal frequency (in Hz)

**Return value:**

- Auto-reload: value (between `Min_Data=0` and `Max_Data=65535`)

**Notes:**

- ex: `__LL_TIM_CALC_ARR (1000000, LL_TIM_GetPrescaler (), 10000);`

[\\_\\_LL\\_TIM\\_CALC\\_DELAY](#)**Description:**

- `LL_HELPER` macro calculating the compare value required to achieve the required timer output compare active/inactive delay.

**Parameters:**

- `__TIMCLK__`: timer input clock frequency (in Hz)
- `__PSC__`: prescaler
- `__DELAY__`: timer output compare active/inactive delay (in us)

**Return value:**

- Compare: value (between Min\_Data=0 and Max\_Data=65535)

**Notes:**

- ex: `__LL_TIM_CALC_DELAY (1000000, LL_TIM_GetPrescaler (), 10);`

**\_\_LL\_TIM\_CALC\_PULSE****Description:**

- HELPER macro calculating the auto-reload value to achieve the required pulse duration (when the timer operates in one pulse mode).

**Parameters:**

- `__TIMCLK__`: timer input clock frequency (in Hz)
- `__PSC__`: prescaler
- `__DELAY__`: timer output compare active/inactive delay (in us)
- `__PULSE__`: pulse duration (in us)

**Return value:**

- Auto-reload: value (between Min\_Data=0 and Max\_Data=65535)

**Notes:**

- ex: `__LL_TIM_CALC_PULSE (1000000, LL_TIM_GetPrescaler (), 10, 20);`

**\_\_LL\_TIM\_GET\_ICPSC\_RATIO****Description:**

- HELPER macro retrieving the ratio of the input capture prescaler.

**Parameters:**

- `__ICPSC__`: This parameter can be one of the following values:
  - `LL_TIM_ICPSC_DIV1`
  - `LL_TIM_ICPSC_DIV2`
  - `LL_TIM_ICPSC_DIV4`
  - `LL_TIM_ICPSC_DIV8`

**Return value:**

- Input: capture prescaler ratio (1, 2, 4 or 8)

**Notes:**

- ex: `__LL_TIM_GET_ICPSC_RATIO (LL_TIM_IC_GetPrescaler ());`

***Common Write and read registers Macros*****LL\_TIM\_WriteReg****Description:**

- Write a value in TIM register.

**Parameters:**

- \_\_INSTANCE\_\_: TIM Instance
- \_\_REG\_\_: Register to be written
- \_\_VALUE\_\_: Value to be written in the register

**Return value:**

- None

**LL\_TIM\_ReadReg****Description:**

- Read a value in TIM register.

**Parameters:**

- \_\_INSTANCE\_\_: TIM Instance
- \_\_REG\_\_: Register to be read

**Return value:**

- Register: value

## 79 LL USART Generic Driver

### 79.1 USART Firmware driver registers structures

#### 79.1.1 LL\_USART\_InitTypeDef

##### Data Fields

- *uint32\_t BaudRate*
- *uint32\_t DataWidth*
- *uint32\_t StopBits*
- *uint32\_t Parity*
- *uint32\_t TransferDirection*
- *uint32\_t HardwareFlowControl*
- *uint32\_t OverSampling*

##### Field Documentation

- ***uint32\_t LL\_USART\_InitTypeDef::BaudRate***  
This field defines expected Usart communication baud rate. This feature can be modified afterwards using unitary function **LL\_USART\_SetBaudRate()**.
- ***uint32\_t LL\_USART\_InitTypeDef::DataWidth***  
Specifies the number of data bits transmitted or received in a frame. This parameter can be a value of **USART\_LL\_EC\_DATAWIDTH**. This feature can be modified afterwards using unitary function **LL\_USART\_SetDataWidth()**.
- ***uint32\_t LL\_USART\_InitTypeDef::StopBits***  
Specifies the number of stop bits transmitted. This parameter can be a value of **USART\_LL\_EC\_STOPBITS**. This feature can be modified afterwards using unitary function **LL\_USART\_SetStopBitsLength()**.
- ***uint32\_t LL\_USART\_InitTypeDef::Parity***  
Specifies the parity mode. This parameter can be a value of **USART\_LL\_EC\_PARITY**. This feature can be modified afterwards using unitary function **LL\_USART\_SetParity()**.
- ***uint32\_t LL\_USART\_InitTypeDef::TransferDirection***  
Specifies whether the Receive and/or Transmit mode is enabled or disabled. This parameter can be a value of **USART\_LL\_EC\_DIRECTION**. This feature can be modified afterwards using unitary function **LL\_USART\_SetTransferDirection()**.
- ***uint32\_t LL\_USART\_InitTypeDef::HardwareFlowControl***  
Specifies whether the hardware flow control mode is enabled or disabled. This parameter can be a value of **USART\_LL\_EC\_HWCONTROL**. This feature can be modified afterwards using unitary function **LL\_USART\_SetHWFlowCtrl()**.
- ***uint32\_t LL\_USART\_InitTypeDef::OverSampling***  
Specifies whether USART oversampling mode is 16 or 8. This parameter can be a value of **USART\_LL\_EC\_OVERSAMPLING**. This feature can be modified afterwards using unitary function **LL\_USART\_SetOverSampling()**.

#### 79.1.2 LL\_USART\_ClockInitTypeDef

##### Data Fields

- *uint32\_t ClockOutput*
- *uint32\_t ClockPolarity*
- *uint32\_t ClockPhase*
- *uint32\_t LastBitClockPulse*

### Field Documentation

- ***uint32\_t LL\_USART\_ClockInitTypeDef::ClockOutput***  
Specifies whether the USART clock is enabled or disabled. This parameter can be a value of **USART\_LL\_EC\_CLOCK**.USART HW configuration can be modified afterwards using unitary functions **LL\_USART\_EnableSCLKOutput()** or **LL\_USART\_DisableSCLKOutput()**. For more details, refer to description of this function.
- ***uint32\_t LL\_USART\_ClockInitTypeDef::ClockPolarity***  
Specifies the steady state of the serial clock. This parameter can be a value of **USART\_LL\_EC\_POLARITY**.USART HW configuration can be modified afterwards using unitary functions **LL\_USART\_SetClockPolarity()**. For more details, refer to description of this function.
- ***uint32\_t LL\_USART\_ClockInitTypeDef::ClockPhase***  
Specifies the clock transition on which the bit capture is made. This parameter can be a value of **USART\_LL\_EC\_PHASE**.USART HW configuration can be modified afterwards using unitary functions **LL\_USART\_SetClockPhase()**. For more details, refer to description of this function.
- ***uint32\_t LL\_USART\_ClockInitTypeDef::LastBitClockPulse***  
Specifies whether the clock pulse corresponding to the last transmitted data bit (MSB) has to be output on the SCLK pin in synchronous mode. This parameter can be a value of **USART\_LL\_EC\_LASTCLKPULSE**.USART HW configuration can be modified afterwards using unitary functions **LL\_USART\_SetLastClkPulseOutput()**. For more details, refer to description of this function.

## 79.2 USART Firmware driver API description

### 79.2.1 Detailed description of functions

#### LL\_USART\_Enable

| Function name        | <code>__STATIC_INLINE void LL_USART_Disable (USART_TypeDef * USARTx)</code>                                                                                                                                                        |
| Function description | USART Disable (all USART prescalers and outputs are disabled)                                                                                                                                                                      |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>USARTx:</b> USART Instance</li> </ul>                                                                                                                                                  |
| Return values        | <ul style="list-style-type: none"> <li>• <b>None</b></li> </ul>                                                                                                                                                                    |
| Notes                | <ul style="list-style-type: none"> <li>• When USART is disabled, USART prescalers and outputs are stopped immediately, and current operations are discarded. The configuration of the USART is kept, but all the status</li> </ul> |

flags, in the USARTx\_ISR are set to their default values.

Reference Manual to  
LL API cross  
reference:

- CR1 UE LL\_USART\_Disable

### **LL\_USART\_IsEnabled**

Function name **\_STATIC\_INLINE uint32\_t LL\_USART\_IsEnabled(**USART\_TypeDef \* USARTx**)**

Function description Indicate if USART is enabled.

Parameters • **USARTx**: USART Instance

Return values • **State**: of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• CR1 UE LL\_USART\_IsEnabled

### **LL\_USART\_EnableInStopMode**

Function name **\_STATIC\_INLINE void LL\_USART\_EnableInStopMode(**USART\_TypeDef \* USARTx**)**

Function description USART enabled in STOP Mode.

Parameters • **USARTx**: USART Instance

Return values • **None**

Notes

- When this function is enabled, USART is able to wake up the MCU from Stop mode, provided that USART clock selection is HSI or LSE in RCC.
- Macro IS\_UART\_WAKEUP\_FROMSTOP\_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

Reference Manual to  
LL API cross  
reference:  
• CR1 UESM LL\_USART\_EnableInStopMode

### **LL\_USART\_DisableInStopMode**

Function name **\_STATIC\_INLINE void LL\_USART\_DisableInStopMode(**USART\_TypeDef \* USARTx**)**

Function description USART disabled in STOP Mode.

Parameters • **USARTx**: USART Instance

Return values • **None**

Notes

- When this function is disabled, USART is not able to wake up the MCU from Stop mode
- Macro IS\_UART\_WAKEUP\_FROMSTOP\_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode feature is supported by the USARTx instance.

- Reference Manual to LL API cross reference:
- CR1 UESM LL\_USART\_DisableInStopMode

**LL\_USART\_EnableDirectionTx**

Function name      **`_STATIC_INLINE void LL_USART_EnableDirectionTx(  
                          USART_TypeDef * USARTx>)`**

Function description      Transmitter Enable.

Parameters      • **USARTx:** USART Instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR1 TE LL\_USART\_EnableDirectionTx

**LL\_USART\_DisableDirectionTx**

Function name      **`_STATIC_INLINE void LL_USART_DisableDirectionTx(  
                          USART_TypeDef * USARTx>)`**

Function description      Transmitter Disable.

Parameters      • **USARTx:** USART Instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR1 TE LL\_USART\_DisableDirectionTx

**LL\_USART\_SetTransferDirection**

Function name      **`_STATIC_INLINE void LL_USART_SetTransferDirection(  
                          USART_TypeDef * USARTx, uint32_t TransferDirection)`**

Function description      Configure simultaneously enabled/disabled states of Transmitter  
and Receiver.

Parameters      • **USARTx:** USART Instance  
• **TransferDirection:** This parameter can be one of the  
following values:  
– LL\_USART\_DIRECTION\_NONE  
– LL\_USART\_DIRECTION\_RX  
– LL\_USART\_DIRECTION\_TX  
– LL\_USART\_DIRECTION\_TX\_RX

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR1 RE LL\_USART\_SetTransferDirection  
• CR1 TE LL\_USART\_SetTransferDirection

**LL\_USART\_GetTransferDirection**

Function name      **`_STATIC_INLINE uint32_t LL_USART_GetTransferDirection(  
                          USART_TypeDef * USARTx)`**

Function description      Return enabled/disabled states of Transmitter and Receiver.

Parameters      • **USARTx:** USART Instance

**LL\_USART\_GetRXPinLevel**

Function name **`_STATIC_INLINE uint32_t LL_USART_GetRXPinLevel(  
USART_TypeDef * USARTx)`**

Function description Retrieve RX pin active level logic configuration.

Parameters • **USARTx:** USART Instance

Return values • **Returned:** value can be one of the following values:  
– LL\_USART\_RXPIN\_LEVEL\_STANDARD  
– LL\_USART\_RXPIN\_LEVEL\_INVERTED

Reference Manual to  
LL API cross  
reference:  
• CR2 RXINV LL\_USART\_GetRXPinLevel

**LL\_USART\_SetTXPinLevel**

Function name **`_STATIC_INLINE void LL_USART_SetTXPinLevel(  
USART_TypeDef * USARTx, uint32_t PinInvMethod)`**

Function description Configure TX pin active level logic.

Parameters • **USARTx:** USART Instance  
• **PinInvMethod:** This parameter can be one of the following values:  
– LL\_USART\_TXPIN\_LEVEL\_STANDARD  
– LL\_USART\_TXPIN\_LEVEL\_INVERTED

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
• CR2 TXINV LL\_USART\_SetTXPinLevel

**LL\_USART\_GetTXPinLevel**

Function name **`_STATIC_INLINE uint32_t LL_USART_GetTXPinLevel(  
USART_TypeDef * USARTx)`**

Function description Retrieve TX pin active level logic configuration.

Parameters • **USARTx:** USART Instance

Return values • **Returned:** value can be one of the following values:  
– LL\_USART\_TXPIN\_LEVEL\_STANDARD  
– LL\_USART\_TXPIN\_LEVEL\_INVERTED

Reference Manual to  
LL API cross  
reference:  
• CR2 TXINV LL\_USART\_GetTXPinLevel

**LL\_USART\_SetBinaryDataLogic**

Function name **`_STATIC_INLINE void LL_USART_SetBinaryDataLogic(  
USART_TypeDef * USARTx, uint32_t DataLogic)`**

Function description Configure Binary data logic.

Parameters • **USARTx:** USART Instance

- **DataLogic:** This parameter can be one of the following values:
  - LL\_USART\_BINARY\_LOGIC\_POSITIVE
  - LL\_USART\_BINARY\_LOGIC\_NEGATIVE
- **None**
- Notes
  - Allow to define how Logical data from the data register are send/received : either in positive/direct logic (1=H, 0=L) or in negative/inverse logic (1=L, 0=H)
- Reference Manual to LL API cross reference:
  - CR2 DATAINV LL\_USART\_SetBinaryDataLogic

### **LL\_USART\_GetBinaryDataLogic**

- Function name      **`__STATIC_INLINE uint32_t LL_USART_GetBinaryDataLogic(  
                  USART_TypeDef * USARTx)`**
- Function description      Retrieve Binary data configuration.
- Parameters
  - **USARTx:** USART Instance
- Return values
  - **Returned:** value can be one of the following values:
    - LL\_USART\_BINARY\_LOGIC\_POSITIVE
    - LL\_USART\_BINARY\_LOGIC\_NEGATIVE
- Reference Manual to LL API cross reference:
  - CR2 DATAINV LL\_USART\_GetBinaryDataLogic

### **LL\_USART\_SetTransferBitOrder**

- Function name      **`__STATIC_INLINE void LL_USART_SetTransferBitOrder(  
                  USART_TypeDef * USARTx, uint32_t BitOrder)`**
- Function description      Configure transfer bit order (either Less or Most Significant Bit First)
- Parameters
  - **USARTx:** USART Instance
  - **BitOrder:** This parameter can be one of the following values:
    - LL\_USART\_BITORDER\_LSBFIRST
    - LL\_USART\_BITORDER\_MSBFIRST
- Return values
  - **None**
- Notes
  - MSB First means data is transmitted/received with the MSB first, following the start bit. LSB First means data is transmitted/received with data bit 0 first, following the start bit.
- Reference Manual to LL API cross reference:
  - CR2 MSBFIRST LL\_USART\_SetTransferBitOrder

### **LL\_USART\_ConfigLINMode**

Function name

**`_STATIC_INLINE void LL_USART_ConfigLINMode(  
 USART_TypeDef * USARTx)`**

Function description

Perform basic configuration of USART for enabling use in LIN Mode.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Notes

- In LIN mode, the following bits must be kept cleared: STOP and CLKEN bits in the USART\_CR2 register,SCEN bit in the USART\_CR3 register,IREN bit in the USART\_CR3 register,HDSEL bit in the USART\_CR3 register. This function also set the UART/USART in LIN mode.
- Macro IS\_USART\_LIN\_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.
- Call of this function is equivalent to following function call sequence : Clear CLKEN in CR2 using LL\_USART\_DisableSCLKOutput() functionClear STOP in CR2 using LL\_USART\_SetStopBitsLength() functionClear SCEN in CR3 using LL\_USART\_DisableSmartcard() functionClear IREN in CR3 using LL\_USART\_DisableIrda() functionClear HDSEL in CR3 using LL\_USART\_DisableHalfDuplex() functionSet LINEN in CR2 using LL\_USART\_EnableLIN() function
- Other remaining configurations items related to LIN Mode (as Baud Rate, Word length, LIN Break Detection Length, ...) should be set using dedicated functions

**LL\_USART\_IsActiveFlag\_FE**

Function name **\_\_STATIC\_INLINE uint32\_t LL\_USART\_IsActiveFlag\_FE  
(USART\_TypeDef \* USARTx)**

Function description Check if the USART Framing Error Flag is set or not.

Parameters • **USARTx:** USART Instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• ISR FE LL\_USART\_IsActiveFlag\_FE

**LL\_USART\_IsActiveFlag\_NE**

Function name **\_\_STATIC\_INLINE uint32\_t LL\_USART\_IsActiveFlag\_NE  
(USART\_TypeDef \* USARTx)**

Function description Check if the USART Noise error detected Flag is set or not.

Parameters • **USARTx:** USART Instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• ISR NF LL\_USART\_IsActiveFlag\_NE

**LL\_USART\_IsActiveFlag\_ORE**

Function name **\_\_STATIC\_INLINE uint32\_t LL\_USART\_IsActiveFlag\_ORE  
(USART\_TypeDef \* USARTx)**

Function description Check if the USART OverRun Error Flag is set or not.

Parameters • **USARTx:** USART Instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• ISR ORE LL\_USART\_IsActiveFlag\_ORE

**LL\_USART\_IsActiveFlag\_IDLE**

Function name **\_\_STATIC\_INLINE uint32\_t LL\_USART\_IsActiveFlag\_IDLE  
(USART\_TypeDef \* USARTx)**

Function description Check if the USART IDLE line detected Flag is set or not.

Parameters • **USARTx:** USART Instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• ISR IDLE LL\_USART\_IsActiveFlag\_IDLE

### **LL\_USART\_ClearFlag\_FE**

Function name

**`_STATIC_INLINE void LL_USART_ClearFlag_FE  
(USART_TypeDef * USARTx)`**

Function description

Clear Framing Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- ICR FECF LL\_USART\_ClearFlag\_FE

### **LL\_USART\_ClearFlag\_NE**

Function name

**`_STATIC_INLINE void LL_USART_ClearFlag_NE  
(USART_TypeDef * USARTx)`**

Function description

Clear Noise detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- ICR NCF LL\_USART\_ClearFlag\_NE

### **LL\_USART\_ClearFlag\_ORE**

Function name

**`_STATIC_INLINE void LL_USART_ClearFlag_ORE  
(USART_TypeDef * USARTx)`**

Function description

Clear OverRun Error Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- ICR ORECF LL\_USART\_ClearFlag\_ORE

### **LL\_USART\_ClearFlag\_IDLE**

Function name

**`_STATIC_INLINE void LL_USART_ClearFlag_IDLE  
(USART_TypeDef * USARTx)`**

Function description

Clear IDLE line detected Flag.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

- Reference Manual to  
LL API cross  
reference:
- ICR IDLECF LL\_USART\_ClearFlag\_IDLE

### LL\_USART\_ClearFlag\_TC

Function name **`_STATIC_INLINE void LL_USART_ClearFlag_TC  
(USART_TypeDef * USARTx)`**

Function description Clear Transmission Complete Flag.

- Parameters
- **USARTx**: USART Instance

- Return values
- **None**

Reference Manual to  
LL API cross  
reference:

- ICR TCCF LL\_USART\_ClearFlag\_TC

### LL\_USART\_ClearFlag\_LBD

Function name **`_STATIC_INLINE void LL_USART_ClearFlag_LBD  
(USART_TypeDef * USARTx)`**

Function description Clear LIN Break Detection Flag.

- Parameters
- **USARTx**: USART Instance

- Return values
- **None**

Notes

- Macro IS\_UART\_LIN\_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to  
LL API cross  
reference:

- ICR LBDCF LL\_USART\_ClearFlag\_LBD

### LL\_USART\_ClearFlag\_nCTS

Function name **`_STATIC_INLINE void LL_USART_ClearFlag_nCTS  
(USART_TypeDef * USARTx)`**

Function description Clear CTS Interrupt Flag.

- Parameters
- **USARTx**: USART Instance

- Return values
- **None**

Notes

- Macro IS\_UART\_HWFLOW\_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

Reference Manual to  
LL API cross  
reference:

- ICR CTSCF LL\_USART\_ClearFlag\_nCTS

**LL\_USART\_ClearFlag\_RTO**

Function name **`_STATIC_INLINE void LL_USART_ClearFlag_RTO(USART_TypeDef * USARTx)`**

Function description Clear Receiver Time Out Flag.

Parameters • **USARTx:** USART Instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
• ICR RTOCF LL\_USART\_ClearFlag\_RTO

**LL\_USART\_ClearFlag\_EOB**

Function name **`_STATIC_INLINE void LL_USART_ClearFlag_EOB(USART_TypeDef * USARTx)`**

Function description Clear End Of Block Flag.

Parameters • **USARTx:** USART Instance

Return values • **None**

Notes • Macro IS\_SMARTCARD\_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to  
LL API cross  
reference:  
• ICR EOBCF LL\_USART\_ClearFlag\_EOB

**LL\_USART\_ClearFlag\_CM**

Function name **`_STATIC_INLINE void LL_USART_ClearFlag_CM(USART_TypeDef * USARTx)`**

Function description Clear Character Match Flag.

Parameters • **USARTx:** USART Instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
• ICR CMCF LL\_USART\_ClearFlag\_CM

**LL\_USART\_ClearFlag\_WKUP**

Function name **`_STATIC_INLINE void LL_USART_ClearFlag_WKUP(USART_TypeDef * USARTx)`**

Function description Clear Wake Up from stop mode Flag.

Parameters • **USARTx:** USART Instance

Return values • **None**

Notes • Macro  
IS\_UART\_WAKEUP\_FROMSTOP\_INSTANCE(USARTx) can be used to check whether or not Wake-up from Stop mode

feature is supported by the USARTx instance.

Reference Manual to  
LL API cross  
reference:

### LL\_USART\_EnableIT\_IDLE

Function name

`__STATIC_INLINE void LL_USART_EnableIT_IDLE  
(USART_TypeDef * USARTx)`

Function description

Enable IDLE Interrupt.

Parameters

- **USARTx**: USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- CR1 IDLEIE LL\_USART\_EnableIT\_IDLE

### LL\_USART\_EnableIT\_RXNE

Function name

`__STATIC_INLINE void LL_USART_EnableIT_RXNE  
(USART_TypeDef * USARTx)`

Function description

Enable RX Not Empty Interrupt.

Parameters

- **USARTx**: USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- CR1 RXNEIE LL\_USART\_EnableIT\_RXNE

### LL\_USART\_EnableIT\_TC

Function name

`__STATIC_INLINE void LL_USART_EnableIT_TC  
(USART_TypeDef * USARTx)`

Function description

Enable Transmission Complete Interrupt.

Parameters

- **USARTx**: USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- CR1 TCIE LL\_USART\_EnableIT\_TC

### LL\_USART\_EnableIT\_TXE

Function name

`__STATIC_INLINE void LL_USART_EnableIT_TXE  
(USART_TypeDef * USARTx)`

Function description

Enable TX Empty Interrupt.

Parameters

- **USARTx**: USART Instance

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CR1 TXEIE LL\_USART\_EnableIT\_TXE

### **LL\_USART\_EnableIT\_PE**

Function name

**`_STATIC_INLINE void LL_USART_EnableIT_PE  
(USART_TypeDef * USARTx)`**

Function description

Enable Parity Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- CR1 PEIE LL\_USART\_EnableIT\_PE

### **LL\_USART\_EnableIT\_CM**

Function name

**`_STATIC_INLINE void LL_USART_EnableIT_CM  
(USART_TypeDef * USARTx)`**

Function description

Enable Character Match Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- CR1 CMIE LL\_USART\_EnableIT\_CM

### **LL\_USART\_EnableIT\_RTO**

Function name

**`_STATIC_INLINE void LL_USART_EnableIT_RTO  
(USART_TypeDef * USARTx)`**

Function description

Enable Receiver Timeout Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Reference Manual to

LL API cross

reference:

- CR1 RTOIE LL\_USART\_EnableIT\_RTO

### **LL\_USART\_EnableIT\_EOB**

Function name

**`_STATIC_INLINE void LL_USART_EnableIT_EOB  
(USART_TypeDef * USARTx)`**

Function description

Enable End Of Block Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Notes

- Macro IS\_SMARTCARD\_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the

USARTx instance.

Reference Manual to  
LL API cross  
reference:

- CR1 EOBIIE LL\_USART\_EnableIT\_EOB

### **LL\_USART\_EnableIT\_LBD**

Function name

**`_STATIC_INLINE void LL_USART_EnableIT_LBD  
(USART_TypeDef * USARTx)`**

Function description

Enable LIN Break Detection Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Notes

- Macro IS\_UART\_LIN\_INSTANCE(USARTx) can be used to check whether or not LIN feature is supported by the USARTx instance.

Reference Manual to  
LL API cross  
reference:

- CR2 LBDIE LL\_USART\_EnableIT\_LBD

### **LL\_USART\_EnableIT\_ERROR**

Function name

**`_STATIC_INLINE void LL_USART_EnableIT_ERROR  
(USART_TypeDef * USARTx)`**

Function description

Enable Error Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Notes

- When set, Error Interrupt Enable Bit is enabling interrupt generation in case of a framing error, overrun error or noise flag (FE=1 or ORE=1 or NF=1 in the USARTx\_ISR register). 0: Interrupt is inhibited 1: An interrupt is generated when FE=1 or ORE=1 or NF=1 in the USARTx\_ISR register.

Reference Manual to  
LL API cross  
reference:

- CR3 EIE LL\_USART\_EnableIT\_ERROR

### **LL\_USART\_EnableIT\_CTS**

Function name

**`_STATIC_INLINE void LL_USART_EnableIT_CTS  
(USART_TypeDef * USARTx)`**

Function description

Enable CTS Interrupt.

Parameters

- **USARTx:** USART Instance

Return values

- **None**

Notes

- Macro IS\_UART\_HWFLOW\_INSTANCE(USARTx) can be used to check whether or not Hardware Flow control feature is supported by the USARTx instance.

- Reference Manual to  
LL API cross  
reference:
- CR3 CTSIE LL\_USART\_EnableIT\_CTS

**LL\_USART\_IsEnabledIT\_CM**

Function name **`_STATIC_INLINE uint32_t LL_USART_IsEnabledIT_CM  
(USART_TypeDef * USARTx)`**

Function description Check if the USART Character Match Interrupt is enabled or disabled.

Parameters • **USARTx:** USART Instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
CR1 CMIE LL\_USART\_IsEnabledIT\_CM

**LL\_USART\_IsEnabledIT\_RTO**

Function name **`_STATIC_INLINE uint32_t LL_USART_IsEnabledIT_RTO  
(USART_TypeDef * USARTx)`**

Function description Check if the USART Receiver Timeout Interrupt is enabled or disabled.

Parameters • **USARTx:** USART Instance

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
CR1 RTOIE LL\_USART\_IsEnabledIT\_RTO

**LL\_USART\_IsEnabledIT\_EOB**

Function name **`_STATIC_INLINE uint32_t LL_USART_IsEnabledIT_EOB  
(USART_TypeDef * USARTx)`**

Function description Check if the USART End Of Block Interrupt is enabled or disabled.

Parameters • **USARTx:** USART Instance

Return values • **State:** of bit (1 or 0).

Notes • Macro IS\_SMARTCARD\_INSTANCE(USARTx) can be used to check whether or not Smartcard feature is supported by the USARTx instance.

Reference Manual to  
LL API cross  
reference:

**LL\_USART\_DisableDMAReq\_TX**

Function name      **STATIC\_INLINE void LL\_USART\_DisableDMAReq\_TX  
(USART\_TypeDef \* USARTx)**

Function description      Disable DMA Mode for transmission.

Parameters      • **USARTx:** USART Instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:  
• CR3 DMAT LL\_USART\_DisableDMAReq\_TX

**LL\_USART\_IsEnabledDMAReq\_TX**

Function name      **STATIC\_INLINE uint32\_t LL\_USART\_IsEnabledDMAReq\_TX  
(USART\_TypeDef \* USARTx)**

Function description      Check if DMA Mode is enabled for transmission.

Parameters      • **USARTx:** USART Instance

Return values      • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
• CR3 DMAT LL\_USART\_IsEnabledDMAReq\_TX

**LL\_USART\_EnableDMADeactOnRxErr**

Function name      **STATIC\_INLINE void LL\_USART\_EnableDMADeactOnRxErr  
(USART\_TypeDef \* USARTx)**

Function description      Enable DMA Disabling on Reception Error.

Parameters      • **USARTx:** USART Instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:

## 79.3 USART Firmware driver defines

### 79.3.1 USART

***Address Length Detection***

LL\_USART\_ADDRESS\_DETECT\_4B 4-bit address detection method selected

LL\_USART\_ADDRESS\_DETECT\_7B 7-bit address detection (in 8-bit data mode) method selected

***Autobaud Detection***

LL\_USART\_AUTOBAUD\_DETECT\_ON\_STARTBIT Measurement of the start bit is used to detect the baud rate

LL\_USART\_AUTOBAUD\_DETECT\_ON\_FALLINGEDGE Falling edge to falling edge measurement. Received frame must start with a single bit = 1 -&gt; Frame = Start1xxxxxxxx

| LL_USART_DIRECTION_TX    | Transmitter is enabled and Receiver is disabled |
| LL_USART_DIRECTION_TX_RX | Transmitter and Receiver are enabled            |

**DMA Register Data**

|                                |                                                    |
|--------------------------------|----------------------------------------------------|
| LL_USART_DMA_REG_DATA_TRANSMIT | Get address of data register used for transmission |
| LL_USART_DMA_REG_DATA_RECEIVE  | Get address of data register used for reception    |

**Get Flags Defines**

|                    |                                     |
|--------------------|-------------------------------------|
| LL_USART_ISR_PE    | Parity error flag                   |
| LL_USART_ISR_FE    | Framing error flag                  |
| LL_USART_ISR_NE    | Noise detected flag                 |
| LL_USART_ISR_ORE   | Overrun error flag                  |
| LL_USART_ISR_IDLE  | Idle line detected flag             |
| LL_USART_ISR_RXNE  | Read data register not empty flag   |
| LL_USART_ISR_TC    | Transmission complete flag          |
| LL_USART_ISR_TXE   | Transmit data register empty flag   |
| LL_USART_ISR_LBDF  | LIN break detection flag            |
| LL_USART_ISR_CTSIF | CTS interrupt flag                  |
| LL_USART_ISR_CTS   | CTS flag                            |
| LL_USART_ISR_RTOF  | Receiver timeout flag               |
| LL_USART_ISR_EOBF  | End of block flag                   |
| LL_USART_ISR_ABRE  | Auto baud rate error flag           |
| LL_USART_ISR_ABRF  | Auto baud rate flag                 |
| LL_USART_ISR_BUSY  | Busy flag                           |
| LL_USART_ISR_CMF   | Character match flag                |
| LL_USART_ISR_SBKF  | Send break flag                     |
| LL_USART_ISR_RWU   | Receiver wakeup from Mute mode flag |
| LL_USART_ISR_WUF   | Wakeup from Stop mode flag          |
| LL_USART_ISR_TEACK | Transmit enable acknowledge flag    |
| LL_USART_ISR_REACK | Receive enable acknowledge flag     |

**Hardware Control**

|                            |                                                                                        |
|----------------------------|----------------------------------------------------------------------------------------|
| LL_USART_HWCONTROL_NONE    | CTS and RTS hardware flow control disabled                                             |
| LL_USART_HWCONTROL_RTS     | RTS output enabled, data is only requested when there is space in the receive buffer   |
| LL_USART_HWCONTROL_CTS     | CTS mode enabled, data is only transmitted when the nCTS input is asserted (tied to 0) |
| LL_USART_HWCONTROL_RTS_CTS | CTS and RTS hardware flow control enabled                                              |

***IrDA Power***

|                            |                        |
|----------------------------|------------------------|
| LL_USART_IRDA_POWER_NORMAL | IrDA normal power mode |
| LL_USART_IRDA_POWER_LOW    | IrDA low power mode    |

***IT Defines***

|                     |                                               |
|---------------------|-----------------------------------------------|
| LL_USART_CR1_IDLEIE | IDLE interrupt enable                         |
| LL_USART_CR1_RXNEIE | Read data register not empty interrupt enable |
| LL_USART_CR1_TCIE   | Transmission complete interrupt enable        |
| LL_USART_CR1_TXEIE  | Transmit data register empty interrupt enable |
| LL_USART_CR1_PEIE   | Parity error                                  |
| LL_USART_CR1_CMIE   | Character match interrupt enable              |
| LL_USART_CR1_RTOIE  | Receiver timeout interrupt enable             |
| LL_USART_CR1_EOBIE  | End of Block interrupt enable                 |
| LL_USART_CR2_LBDIE  | LIN break detection interrupt enable          |
| LL_USART_CR3_EIE    | Error interrupt enable                        |
| LL_USART_CR3_CTSIE  | CTS interrupt enable                          |
| LL_USART_CR3_WUFIE  | Wakeup from Stop mode interrupt enable        |

***Last Clock Pulse***

|                                 |                                                                    |
|---------------------------------|--------------------------------------------------------------------|
| LL_USART_LASTCLKPULSE_NO_OUTPUT | The clock pulse of the last data bit is not output to the SCLK pin |
| LL_USART_LASTCLKPULSE_OUTPUT    | The clock pulse of the last data bit is output to the SCLK pin     |

***LIN Break Detection Length***

|                              |                                        |
|------------------------------|----------------------------------------|
| LL_USART_LINBREAK_DETECT_10B | 10-bit break detection method selected |
| LL_USART_LINBREAK_DETECT_11B | 11-bit break detection method selected |

***Oversampling***

|                          |                    |
|--------------------------|--------------------|
| LL_USART_OVERSAMPLING_16 | Oversampling by 16 |
| LL_USART_OVERSAMPLING_8  | Oversampling by 8  |

***Parity Control***

|                      |                                                    |
|----------------------|----------------------------------------------------|
| LL_USART_PARITY_NONE | Parity control disabled                            |
| LL_USART_PARITY EVEN | Parity control enabled and Even Parity is selected |
| LL_USART_PARITY ODD  | Parity control enabled and Odd Parity is selected  |

***Clock Phase***

|                      |                                                            |
|----------------------|------------------------------------------------------------|
| LL_USART_PHASE_1EDGE | The first clock transition is the first data capture edge  |
| LL_USART_PHASE_2EDGE | The second clock transition is the first data capture edge |

***Clock Polarity***

|                       |                                                          |
|-----------------------|----------------------------------------------------------|
| LL_USART_POLARITY_LOW | Steady low value on SCLK pin outside transmission window |
|-----------------------|----------------------------------------------------------|

**LL\_USART\_POLARITY\_HIGH** Steady high value on SCLK pin outside transmission window

#### **RX Pin Active Level Inversion**

**LL\_USART\_RXPIN\_LEVEL\_STANDARD** RX pin signal works using the standard logic levels

**LL\_USART\_RXPIN\_LEVEL\_INVERTED** RX pin signal values are inverted.

#### **Stop Bits**

**LL\_USART\_STOPBITS\_0\_5** 0.5 stop bit

**LL\_USART\_STOPBITS\_1** 1 stop bit

**LL\_USART\_STOPBITS\_1\_5** 1.5 stop bits

**LL\_USART\_STOPBITS\_2** 2 stop bits

#### **TX Pin Active Level Inversion**

**LL\_USART\_TXPIN\_LEVEL\_STANDARD** TX pin signal works using the standard logic levels

**LL\_USART\_TXPIN\_LEVEL\_INVERTED** TX pin signal values are inverted.

#### **TX RX Pins Swap**

**LL\_USART\_TXRX\_STANDARD** TX/RX pins are used as defined in standard pinout

**LL\_USART\_TXRX\_SWAPPED** TX and RX pins functions are swapped.

#### **Wakeup**

**LL\_USART\_WAKEUP\_IDLELINE** USART wake up from Mute mode on Idle Line

**LL\_USART\_WAKEUP\_ADDRESSMARK** USART wake up from Mute mode on Address Mark

#### **Wakeup Activation**

**LL\_USART\_WAKEUP\_ON\_ADDRESS** Wake up active on address match

**LL\_USART\_WAKEUP\_ON\_STARTBIT** Wake up active on Start bit detection

**LL\_USART\_WAKEUP\_ON\_RXNE** Wake up active on RXNE

#### **Exported Macros Helper**

**\_LL\_USART\_DIV\_SAMPLING8** **Description:**

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 8 bits sampling mode (32 bits value of USARTDIV is returned)

#### **Parameters:**

- **\_PERIPHCLK\_**: Peripheral Clock frequency used for USART instance
- **\_BAUDRATE\_**: Baud rate value to achieve

#### **Return value:**

- USARTDIV: value to be used for BRR register filling in OverSampling\_8 case

**\_LL\_USART\_DIV\_SAMPLING16 Description:**

- Compute USARTDIV value according to Peripheral Clock and expected Baud Rate in 16 bits sampling mode (32 bits value of USARTDIV is returned)

**Parameters:**

- PERIPHCLK: Peripheral Clock frequency used for USART instance
- BAUDRATE: Baud rate value to achieve

**Return value:**

- USARTDIV: value to be used for BRR register filling in OverSampling\_16 case

**Common Write and read registers Macros****LL\_USART\_WriteReg Description:**

- Write a value in USART register.

**Parameters:**

- INSTANCE: USART Instance
- REG: Register to be written
- VALUE: Value to be written in the register

**Return value:**

- None

**LL\_USART\_ReadReg Description:**

- Read a value in USART register.

**Parameters:**

- INSTANCE: USART Instance
- REG: Register to be read

**Return value:**

- Register: value

## 80 LL UTILS Generic Driver

### 80.1 UTILS Firmware driver registers structures

#### 80.1.1 LL\_UTILS\_PLLInitTypeDef

##### Data Fields

- *uint32\_t PLLMul*
- *uint32\_t Prediv*

##### Field Documentation

- *uint32\_t LL\_UTILS\_PLLInitTypeDef::PLLMul*  
Multiplication factor for PLL VCO input clock. This parameter can be a value of [RCC\\_LL\\_EC\\_PLL\\_MUL](#)This feature can be modified afterwards using unitary function [LL\\_RCC\\_PLL\\_ConfigDomain\\_SYS\(\)](#).
- *uint32\_t LL\_UTILS\_PLLInitTypeDef::Prediv*  
Division factor for HSE used as PLL clock source. This parameter can be a value of [RCC\\_LL\\_EC\\_PREDIV\\_DIV](#)This feature can be modified afterwards using unitary function [LL\\_RCC\\_PLL\\_ConfigDomain\\_SYS\(\)](#).

#### 80.1.2 LL\_UTILS\_ClkInitTypeDef

##### Data Fields

- *uint32\_t AHBCLKDivider*
- *uint32\_t APB1CLKDivider*
- *uint32\_t APB2CLKDivider*

##### Field Documentation

- *uint32\_t LL\_UTILS\_ClkInitTypeDef::AHBCLKDivider*  
The AHB clock (HCLK) divider. This clock is derived from the system clock (SYSCLK). This parameter can be a value of [RCC\\_LL\\_EC\\_SYSCLK\\_DIV](#)This feature can be modified afterwards using unitary function [LL\\_RCC\\_SetAHBPrescaler\(\)](#).
- *uint32\_t LL\_UTILS\_ClkInitTypeDef::APB1CLKDivider*  
The APB1 clock (PCLK1) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of [RCC\\_LL\\_EC\\_APB1\\_DIV](#)This feature can be modified afterwards using unitary function [LL\\_RCC\\_SetAPB1Prescaler\(\)](#).
- *uint32\_t LL\_UTILS\_ClkInitTypeDef::APB2CLKDivider*  
The APB2 clock (PCLK2) divider. This clock is derived from the AHB clock (HCLK). This parameter can be a value of [RCC\\_LL\\_EC\\_APB2\\_DIV](#)This feature can be modified afterwards using unitary function [LL\\_RCC\\_SetAPB2Prescaler\(\)](#).

### 80.2 UTILS Firmware driver API description

#### 80.2.1 System Configuration functions

System, AHB and APB buses clocks configuration

- The maximum frequency of the SYSCLK, HCLK, PCLK1 and PCLK2 is 72000000 Hz.
- This section contains the following APIs:
- [LL\\_SetSystemCoreClock\(\)](#)
  - [LL\\_PLL\\_ConfigSystemClock\\_HSI\(\)](#)

- [\*\*LL\\_PLL\\_ConfigSystemClock\\_HSE\(\)\*\*](#)

## 80.2.2 Detailed description of functions

### **LL\_GetUID\_Word0**

|                      |                                                                                                                                |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <b><code>__STATIC_INLINE uint32_t LL_GetUID_Word0 (void )</code></b>                                                           |
| Function description | Get Word0 of the unique device identifier (UID based on 96 bits)                                                               |
| Return values        | <ul style="list-style-type: none"> <li>• <b>UID[31:0]:</b> X and Y coordinates on the wafer expressed in BCD format</li> </ul> |

### **LL\_GetUID\_Word1**

|                      |                                                                                                                                   |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <b><code>__STATIC_INLINE uint32_t LL_GetUID_Word1 (void )</code></b>                                                              |
| Function description | Get Word1 of the unique device identifier (UID based on 96 bits)                                                                  |
| Return values        | <ul style="list-style-type: none"> <li>• <b>UID[63:32]:</b> Wafer number (UID[39:32]) &amp; LOT_NUM[23:0] (UID[63:40])</li> </ul> |

### **LL\_GetUID\_Word2**

|                      |                                                                                                                    |
|----------------------|--------------------------------------------------------------------------------------------------------------------|
| Function name        | <b><code>__STATIC_INLINE uint32_t LL_GetUID_Word2 (void )</code></b>                                               |
| Function description | Get Word2 of the unique device identifier (UID based on 96 bits)                                                   |
| Return values        | <ul style="list-style-type: none"> <li>• <b>UID[95:64]:</b> Lot number (ASCII encoded) - LOT_NUM[55:24]</li> </ul> |

### **LL\_GetFlashSize**

|                      |                                                                                                                                                                                     |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <b><code>__STATIC_INLINE uint32_t LL_GetFlashSize (void )</code></b>                                                                                                                |
| Function description | Get Flash memory size.                                                                                                                                                              |
| Return values        | <ul style="list-style-type: none"> <li>• <b>FLASH_SIZE[15:0]:</b> Flash memory size</li> </ul>                                                                                      |
| Notes                | <ul style="list-style-type: none"> <li>• This bitfield indicates the size of the device Flash memory expressed in Kbytes. As an example, 0x040 corresponds to 64 Kbytes.</li> </ul> |

### **LL\_WWDG\_GetCounter**

Function name

**`_STATIC_INLINE uint32_t LL_WWDG_GetCounter  
(WWDG_TypeDef * WWDGx)`**

Function description

Return current Watchdog Counter Value (7 bits counter value)

Parameters

- **WWDGx:** WWDG Instance

Return values

- **7:** bit Watchdog Counter value

Reference Manual to  
LL API cross  
reference:

- CR T LL\_WWDG\_GetCounter

### **LL\_WWDG\_SetPrescaler**

Function name

**`_STATIC_INLINE void LL_WWDG_SetPrescaler  
(WWDG_TypeDef * WWDGx, uint32_t Prescaler)`**

Function description

Set the time base of the prescaler (WDGTB).

Parameters

- **WWDGx:** WWDG Instance
- **Prescaler:** This parameter can be one of the following values:
  - LL\_WWDG\_PRESCALER\_1
  - LL\_WWDG\_PRESCALER\_2
  - LL\_WWDG\_PRESCALER\_4
  - LL\_WWDG\_PRESCALER\_8

Return values

- **None**

Notes

- Prescaler is used to apply ratio on PCLK clock, so that Watchdog counter is decremented every (4096 x 2<sup>expWDGTB</sup>) PCLK cycles

### **LL\_WWDG\_GetPrescaler**

Function name

**`_STATIC_INLINE uint32_t LL_WWDG_GetPrescaler  
(WWDG_TypeDef * WWDGx)`**

Function description

Return current Watchdog Prescaler Value.

Parameters

- **WWDGx:** WWDG Instance

Return values

- **Returned:** value can be one of the following values:
  - LL\_WWDG\_PRESCALER\_1
  - LL\_WWDG\_PRESCALER\_2
  - LL\_WWDG\_PRESCALER\_4

- Reference Manual to  
LL API cross  
reference:

LL API cross  
reference:

- SR EWIF LL\_WWDG\_IsActiveFlag\_EWKUP

### **LL\_WWDG\_ClearFlag\_EWKUP**

Function name **`__STATIC_INLINE void LL_WWDG_ClearFlag_EWKUP(  
(WWDG_TypeDef * WWDGx)`**

Function description Clear WWDG Early Wakeup Interrupt Flag (EWIF)

Parameters • **WWDGx:** WWDG Instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:

- SR EWIF LL\_WWDG\_ClearFlag\_EWKUP

### **LL\_WWDG\_EnableIT\_EWKUP**

Function name **`__STATIC_INLINE void LL_WWDG_EnableIT_EWKUP(  
(WWDG_TypeDef * WWDGx)`**

Function description Enable the Early Wakeup Interrupt.

Parameters • **WWDGx:** WWDG Instance

Return values • **None**

Notes • When set, an interrupt occurs whenever the counter reaches value 0x40. This interrupt is only cleared by hardware after a reset

Reference Manual to  
LL API cross  
reference:

- CFR EWI LL\_WWDG\_EnableIT\_EWKUP

### **LL\_WWDG\_IsEnabledIT\_EWKUP**

Function name **`__STATIC_INLINE uint32_t LL_WWDG_IsEnabledIT_EWKUP(  
(WWDG_TypeDef * WWDGx)`**

Function description Check if Early Wakeup Interrupt is enabled.

Parameters • **WWDGx:** WWDG Instance

Return values • **State:** of bit (1 or 0).

LL API cross  
reference:

- CFR EWI LL\_WWDG\_IsEnabledIT\_EWKUP

## 81.2 WWDG Firmware driver defines

### 81.2.1 WWDG

#### *IT Defines*

`LL_WWDG_CFR_EWI`

#### *PRESCALER*

`LL_WWDG_PRESCALER_1` WWDG counter clock = (PCLK1/4096)/1

`LL_WWDG_PRESCALER_2` WWDG counter clock = (PCLK1/4096)/2

`LL_WWDG_PRESCALER_4` WWDG counter clock = (PCLK1/4096)/4

`LL_WWDG_PRESCALER_8` WWDG counter clock = (PCLK1/4096)/8

#### *Common Write and read registers macros*

`LL_WWDG_WriteReg` **Description:**

- Write a value in WWDG register.

#### **Parameters:**

- `_INSTANCE_`: WWDG Instance
- `_REG_`: Register to be written
- `_VALUE_`: Value to be written in the register

#### **Return value:**

- None

`LL_WWDG_ReadReg` **Description:**

- Read a value in WWDG register.

#### **Parameters:**

- `_INSTANCE_`: WWDG Instance
- `_REG_`: Register to be read

#### **Return value:**

- Register: value

## 82 Correspondence between API registers and API low-layer driver functions

### 82.1 ADC

Table 25: Correspondence between ADC registers and ADC low-layer driver functions

| Register | Field     | Function                                    |

**General subjects****Why should I use the HAL drivers?**

There are many advantages in using the HAL drivers:

- Ease of use: you can use the HAL drivers to configure and control any peripheral embedded within your STM32 MCU without prior in-depth knowledge of the product.
- HAL drivers provide intuitive and ready-to-use APIs to configure the peripherals and support polling, interrupt and DMA programming model to accommodate all application requirements, thus allowing the end-user to build a complete application by calling a few APIs.
- Higher level of abstraction than a standard peripheral library allowing to transparently manage:
  - Data transfers and processing using blocking mode (polling) or non-blocking mode (interrupt or DMA)
  - Error management through peripheral error detection and timeout mechanism.
- Generic architecture speeding up initialization and porting, thus allowing customers to focus on innovation.
- Generic set of APIs with full compatibility across the STM32 series/lines, to ease the porting task between STM32 MCUs.
- The APIs provided within the HAL drivers are feature-oriented and do not require in-depth knowledge of peripheral operation.
- The APIs provided are modular. They include initialization, IO operation and control functions. The end-user has to call init function, then start the process by calling one IO operation functions (write, read, transmit, receive, ...). Most of the peripherals have the same architecture.
- The number of functions required to build a complete and useful application is very reduced. As an example, to build a UART communication process, the user only has to call HAL\_UART\_Init() then HAL\_UART\_Transmit() or HAL\_UART\_Receive().

**Which STM32F3 devices are supported by the HAL drivers?**

The HAL drivers are developed to support all STM32F3 devices. To ensure compatibility between all devices and portability with others series and lines, the API is split into the generic and the extension APIs . For more details, please refer to [Table 5: "List of devices supported by HAL drivers"](#).

**What is the cost of using HAL drivers in term of code size and performance?**

Like generic architecture drivers, the HAL drivers may induce firmware overhead.

This is due to the high abstraction level and ready-to-use APIs which allow data transfers, errors management and offloads the user application from implementation details.

**Architecture****How many files should I modify to configure the HAL drivers?**

Only one file needs to be modified: `stm32f3xx_hal_conf.h`. You can modify this file by disabling unused modules, or adjusting some parameters (i.e. HSE value, System configuration, ...)

A template is provided in the HAL driver folders (stm32f3xx\_hal\_conf\_template.h).

### Which header files should I include in my application to use the HAL drivers?

Only stm32f3xx\_hal.h file has to be included.

### What is the difference between stm32f3xx\_hal\_ppp.c/h and stm32f3xx\_hal\_ppp\_ex.c/h?

The HAL driver architecture supports common features across STM32 series/lines. To support specific features, the drivers are split into two groups.

- The generic APIs (stm32f3xx\_hal\_ppp.c): It includes the common set of APIs across all the STM32 product lines
- The extension APIs (stm32f3xx\_hal\_ppp\_ex.c): It includes the specific APIs for specific device part number or family.

### Initialization and I/O operation functions

#### How do I configure the system clock?

Unlike the standard library, the system clock configuration is not performed in CMSIS drivers file (system\_stm32f3xx.c) but in the main user application by calling the two main functions, HAL\_RCC\_OscConfig() and HAL\_RCC\_ClockConfig(). It can be modified in any user application section.

#### What is the purpose of the *PPP\_HandleTypeDef \*pHandle* structure located in each driver in addition to the Initialization structure

*PPP\_HandleTypeDef \*pHandle* is the main structure implemented in the HAL drivers. It handles the peripheral configuration and registers, and embeds all the structures and variables required to follow the peripheral device flow (pointer to buffer, Error code, State,...)

However, this structure is not required to service peripherals such as GPIO, SYSTICK, PWR, and RCC.

#### What is the purpose of HAL\_PPP\_MspInit() and HAL\_PPP\_MspDeInit() functions?

These function are called within HAL\_PPP\_Init() and HAL\_PPP\_DeInit(), respectively. They are used to perform the low level Initialization/de-initialization related to the additional hardware resources (RCC, GPIO, NVIC and DMA).

These functions are declared in stm32f3xx\_hal\_msp.c. A template is provided in the HAL driver folders (stm32f3xx\_hal\_msp\_template.c).

#### When and how should I use callbacks functions (functions declared with the attribute \_\_weak)?

Use callback functions for the I/O operations used in DMA or interrupt mode. The PPP process complete callbacks are called to inform the user about process completion in real-time event mode (interrupts).

The Errors callbacks are called when a processing error occurs in DMA or interrupt mode. These callbacks are customized by the user to add user proprietary code. They can be declared in the application. Note that the same process completion callbacks are used for DMA and interrupt mode.

### **Is it mandatory to use HAL\_Init() function at the beginning of the user application?**

It is mandatory to use HAL\_Init() function to enable the system configuration (Prefetch, Data instruction cache,...), configure the systTick and the NVIC priority grouping and the hardware low level initialization.

The SysTick configuration shall be adjusted by calling **HAL\_RCC\_ClockConfig()** function, to obtain 1 ms whatever the system clock.

### **Why do I need to configure the SysTick timer to use the HAL drivers?**

The SysTick timer is configured to be used to generate variable increments by calling **HAL\_IncTick()** function in Systick ISR and retrieve the value of this variable by calling **HAL\_GetTick()** function.

The call **HAL\_GetTick()** function is mandatory when using HAL drivers with Polling Process or when using **HAL\_Delay()**.

### **Why is the SysTick timer configured to have 1 ms?**

This is mandatory to ensure correct IO operation in particular for polling mode operation where the 1 ms is required as timebase.

### **Could HAL\_Delay() function block my application under certain conditions?**

Care must be taken when using **HAL\_Delay()** since this function provides accurate delay based on a variable incremented in SysTick ISR. This implies that if **HAL\_Delay()** is called from a peripheral ISR process, then the SysTick interrupt must have higher priority (numerically lower) than the peripheral interrupt, otherwise the caller ISR process will be blocked. Use **HAL\_NVIC\_SetPriority()** function to change the SysTick interrupt priority.

### **What programming model sequence should I follow to use HAL drivers ?**

Follow the sequence below to use the APIs provided in the HAL drivers:

1. Call **HAL\_Init()** function to initialize the system (data cache, NVIC priority,...).
2. Initialize the system clock by calling **HAL\_RCC\_OscConfig()** followed by **HAL\_RCC\_ClockConfig()**.
3. Add **HAL\_IncTick()** function under **SysTick\_Handler()** ISR function to enable polling process when using **HAL\_Delay()** function
4. Start initializing your peripheral by calling **HAL\_PPP\_Init()**.
5. Implement the hardware low level initialization (Peripheral clock, GPIO, DMA,..) by calling **HAL\_PPP\_MspInit()** in **stm32f3xx\_hal\_msp.c**
6. Start your process operation by calling IO operation functions.

### **What is the purpose of HAL\_PPP\_IRQHandler() function and when should I use it?**

**HAL\_PPP\_IRQHandler()** is used to handle interrupt process. It is called under **PPP\_IRQHandler()** function in **stm32f3xx\_it.c**. In this case, the end-user has to implement only the callbacks functions (prefixed by \_\_weak) to perform the appropriate action when an interrupt is detected. Advanced users can implement their own code in **PPP\_IRQHandler()** without calling **HAL\_PPP\_IRQHandler()**.

### **Can I use directly the macros defined in **stm32f3xx\_hal\_ppp.h** ?**

Yes, you can: a set of macros is provided with the APIs. They allow accessing directly some specific features using peripheral flags.

**Where must PPP\_HandleTypeDef structure peripheral handler be declared?**

PPP\_HandleTypeDef structure peripheral handler must be declared as a global variable, so that all the structure fields are set to 0 by default. In this way, the peripheral handler default state are set to HAL\_PPP\_STATE\_RESET, which is the default state for each peripheral after a system reset.
