### **LL\_DMA\_IsActiveFlag\_GI1**

Function name      **\_STATIC\_INLINE uint32\_t LL\_DMA\_IsActiveFlag\_GI1  
(DMA\_TypeDef \* DMAx)**

Function description      Get Channel 1 global interrupt flag.

Parameters      • **DMAx**: DMAx Instance

Return values      • **State**: of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
ISR GIF1 LL\_DMA\_IsActiveFlag\_GI1

### **LL\_DMA\_IsActiveFlag\_GI2**

Function name      **\_STATIC\_INLINE uint32\_t LL\_DMA\_IsActiveFlag\_GI2  
(DMA\_TypeDef \* DMAx)**

Function description      Get Channel 2 global interrupt flag.

Parameters      • **DMAx**: DMAx Instance

Return values      • **State**: of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

### **LL\_DMA\_ClearFlag\_HT7**

Function name      **\_\_STATIC\_INLINE void LL\_DMA\_ClearFlag\_HT7  
(DMA\_TypeDef \* DMAx)**

Function description      Clear Channel 7 half transfer flag.

Parameters      • **DMAx:** DMAx Instance

Return values      • **None**

- Reference Manual to  
LL API cross  
reference:
- IFCR CHTIF7 LL\_DMA\_ClearFlag\_HT7

### **LL\_DMA\_ClearFlag\_TE1**

Function name      **\_\_STATIC\_INLINE void LL\_DMA\_ClearFlag\_TE1  
(DMA\_TypeDef \* DMAx)**

Function description      Clear Channel 1 transfer error flag.

Parameters      • **DMAx:** DMAx Instance

Return values      • **None**

- Reference Manual to  
LL API cross  
reference:
- IFCR CTEIF1 LL\_DMA\_ClearFlag\_TE1

### **LL\_DMA\_ClearFlag\_TE2**

Function name      **\_\_STATIC\_INLINE void LL\_DMA\_ClearFlag\_TE2  
(DMA\_TypeDef \* DMAx)**

Function description      Clear Channel 2 transfer error flag.

Parameters      • **DMAx:** DMAx Instance

Return values      • **None**

- Reference Manual to  
LL API cross  
reference:
- IFCR CTEIF2 LL\_DMA\_ClearFlag\_TE2

### **LL\_DMA\_ClearFlag\_TE3**

Function name      **\_\_STATIC\_INLINE void LL\_DMA\_ClearFlag\_TE3  
(DMA\_TypeDef \* DMAx)**

Function description      Clear Channel 3 transfer error flag.

Parameters      • **DMAx:** DMAx Instance

Return values      • **None**

|----------------------|--------------------------------------------------------------------------------------------|
| Function name        | <code>_STATIC_INLINE void LL_DMA_EnableIT_TE (DMA_TypeDef * DMAx, uint32_t Channel)</code> |
| Function description | Enable Transfer error interrupt.                                                           |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>DMAx:</b> DMAx Instance</li> </ul>             |

- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CCR TEIE LL\_DMA\_EnableIT\_TE

**LL\_DMA\_DisableIT\_TC**

Function name      **`_STATIC_INLINE void LL_DMA_DisableIT_TC (DMA_TypeDef * DMAx, uint32_t Channel)`**

Function description      Disable Transfer complete interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CCR TCIE LL\_DMA\_DisableIT\_TC

**LL\_DMA\_DisableIT\_HT**

Function name      **`_STATIC_INLINE void LL_DMA_DisableIT_HT (DMA_TypeDef * DMAx, uint32_t Channel)`**

Function description      Disable Half transfer interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CCR HTIE LL\_DMA\_DisableIT\_HT

### **LL\_DMA\_DisableIT\_TE**

Function name

`_STATIC_INLINE void LL_DMA_DisableIT_TE (DMA_TypeDef * DMAx, uint32_t Channel)`

Function description

Disable Transfer error interrupt.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CCR TEIE LL\_DMA\_DisableIT\_TE

### **LL\_DMA\_IsEnabledIT\_TC**

Function name

`_STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_TC (DMA_TypeDef * DMAx, uint32_t Channel)`

Function description

Check if Transfer complete Interrupt is enabled.

Parameters

- **DMAx:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

- CCR TCIE LL\_DMA\_IsEnabledIT\_TC

### **LL\_DMA\_IsEnabledIT\_HT**

Function name

`_STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_HT (DMA_TypeDef * DMAx, uint32_t Channel)`

Function description

Check if Half transfer Interrupt is enabled.

Parameters

- **DMAx:** DMAx Instance

- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

- CCR HTIE LL\_DMA\_IsEnabledIT\_HT

**LL\_DMA\_IsEnabledIT\_TE**

Function name **`__STATIC_INLINE uint32_t LL_DMA_IsEnabledIT_TE(DMA_TypeDef * DMax, uint32_t Channel)`**

Function description

Check if Transfer error Interrupt is enabled.

Parameters

- **DMax:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7

Return values

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

- CCR TEIE LL\_DMA\_IsEnabledIT\_TE

**LL\_DMA\_Init**

Function name **`uint32_t LL_DMA_Init (DMA_TypeDef * DMax, uint32_t Channel, LL_DMA_InitTypeDef * DMA_InitStruct)`**

Function description

Initialize the DMA registers according to the specified parameters in DMA\_InitStruct.

Parameters

- **DMax:** DMAx Instance
- **Channel:** This parameter can be one of the following values:
  - LL\_DMA\_CHANNEL\_1
  - LL\_DMA\_CHANNEL\_2
  - LL\_DMA\_CHANNEL\_3
  - LL\_DMA\_CHANNEL\_4
  - LL\_DMA\_CHANNEL\_5
  - LL\_DMA\_CHANNEL\_6
  - LL\_DMA\_CHANNEL\_7
- **DMA\_InitStruct:** pointer to a LL\_DMA\_InitTypeDef structure.

| <code>LL_DMA_MDATAALIGN_WORD</code>     | Memory data alignment : Word     |

***Memory increment mode***

`LL_DMA_MEMORY_INCREMENT` Memory increment mode Enable

`LL_DMA_MEMORY_NOINCREMENT` Memory increment mode Disable

***Transfer mode***

`LL_DMA_MODE_NORMAL` Normal Mode

`LL_DMA_MODE_CIRCULAR` Circular Mode

***Peripheral data alignment***

`LL_DMA_PDATAALIGN_BYTE` Peripheral data alignment : Byte

`LL_DMA_PDATAALIGN_HALFWORD` Peripheral data alignment : HalfWord

`LL_DMA_PDATAALIGN_WORD` Peripheral data alignment : Word

***Peripheral increment mode***

`LL_DMA_PERIPH_INCREMENT` Peripheral increment mode Enable

`LL_DMA_PERIPH_NOINCREMENT` Peripheral increment mode Disable

***Transfer Priority level***

`LL_DMA_PRIORITY_LOW` Priority level : Low

`LL_DMA_PRIORITY_MEDIUM` Priority level : Medium

`LL_DMA_PRIORITY_HIGH` Priority level : High

`LL_DMA_PRIORITY_VERYHIGH` Priority level : Very\_High

***Convert DMAxChannely***

- `__LL_DMA_GET_INSTANCE` **Description:**
- Convert DMAx\_Channely into DMAx.
- Parameters:**
- `__CHANNEL_INSTANCE__`: DMAx\_Channely

**Return value:**

- DMAx

- `__LL_DMA_GET_CHANNEL` **Description:**
- Convert DMAx\_Channely into `LL_DMA_CHANNEL_y`.

**Parameters:**

- `__CHANNEL_INSTANCE__`: DMAx\_Channely

**Return value:**

- `LL_DMA_CHANNEL_y`

- `__LL_DMA_GET_CHANNEL_INSTANCE` **Description:**
- Convert DMA Instance DMAx and `LL_DMA_CHANNEL_y` into DMAx\_Channely.

**Parameters:**

- `__DMA_INSTANCE__`: DMAx
- `__CHANNEL__`: LL\_DMA\_CHANNEL\_y

**Return value:**

- DMAx\_Channely

**Common Write and read registers macros****LL\_DMA\_WriteReg****Description:**

- Write a value in DMA register.

**Parameters:**

- `__INSTANCE__`: DMA Instance
- `__REG__`: Register to be written
- `__VALUE__`: Value to be written in the register

**Return value:**

- None

**LL\_DMA\_ReadReg****Description:**

- Read a value in DMA register.

**Parameters:**

- `__INSTANCE__`: DMA Instance
- `__REG__`: Register to be read

**Return value:**

- Register: value

## 66 LL EXTI Generic Driver

### 66.1 EXTI Firmware driver registers structures

#### 66.1.1 LL\_EXTI\_InitTypeDef

##### Data Fields

- *uint32\_t Line\_0\_31*
- *uint32\_t Line\_32\_63*
- *FunctionalState LineCommand*
- *uint8\_t Mode*
- *uint8\_t Trigger*

##### Field Documentation

- ***uint32\_t LL\_EXTI\_InitTypeDef::Line\_0\_31***  
Specifies the EXTI lines to be enabled or disabled for Lines in range 0 to 31 This parameter can be any combination of [\*EXTI\\_LL\\_EC\\_LINE\*](#)
- ***uint32\_t LL\_EXTI\_InitTypeDef::Line\_32\_63***  
Specifies the EXTI lines to be enabled or disabled for Lines in range 32 to 63 This parameter can be any combination of [\*EXTI\\_LL\\_EC\\_LINE\*](#)
- ***FunctionalState LL\_EXTI\_InitTypeDef::LineCommand***  
Specifies the new state of the selected EXTI lines. This parameter can be set either to ENABLE or DISABLE
- ***uint8\_t LL\_EXTI\_InitTypeDef::Mode***  
Specifies the mode for the EXTI lines. This parameter can be a value of [\*EXTI\\_LL\\_EC\\_MODE\*](#).
- ***uint8\_t LL\_EXTI\_InitTypeDef::Trigger***  
Specifies the trigger signal active edge for the EXTI lines. This parameter can be a value of [\*EXTI\\_LL\\_EC\\_TRIGGER\*](#).

### 66.2 EXTI Firmware driver API description

#### 66.2.1 Detailed description of functions

##### LL\_EXTI\_EnableIT\_0\_31

Function name      `__STATIC_INLINE void LL_EXTI_EnableIT_0_31 (uint32_t ExtiLine)`

Function description      Enable ExtiLine Interrupt request for Lines in range 0 to 31.

- Parameters
- **ExtiLine:** This parameter can be one of the following values:
    - `LL_EXTI_LINE_0`
    - `LL_EXTI_LINE_1`
    - `LL_EXTI_LINE_2`
    - `LL_EXTI_LINE_3`
    - `LL_EXTI_LINE_4`
    - `LL_EXTI_LINE_5`
    - `LL_EXTI_LINE_6`
    - `LL_EXTI_LINE_7`
    - `LL_EXTI_LINE_8`
    - `LL_EXTI_LINE_9`

- LL\_EXTI\_LINE\_10
- LL\_EXTI\_LINE\_11
- LL\_EXTI\_LINE\_12
- LL\_EXTI\_LINE\_13
- LL\_EXTI\_LINE\_14
- LL\_EXTI\_LINE\_15
- LL\_EXTI\_LINE\_16
- LL\_EXTI\_LINE\_17
- LL\_EXTI\_LINE\_18
- LL\_EXTI\_LINE\_19
- LL\_EXTI\_LINE\_20
- LL\_EXTI\_LINE\_21
- LL\_EXTI\_LINE\_22
- LL\_EXTI\_LINE\_23
- LL\_EXTI\_LINE\_24
- LL\_EXTI\_LINE\_25
- LL\_EXTI\_LINE\_26
- LL\_EXTI\_LINE\_27
- LL\_EXTI\_LINE\_28
- LL\_EXTI\_LINE\_29
- LL\_EXTI\_LINE\_30
- LL\_EXTI\_LINE\_31
- LL\_EXTI\_LINE\_ALL\_0\_31

Return values

- **None**

Notes

- The reset value for the direct or internal lines (see RM) is set to 1 in order to enable the interrupt by default. Bits are set automatically at Power on.
- Please check each device line mapping for EXTI Line availability

### **LL\_EXTI\_EnableIT\_32\_63**

Function name      **\_\_STATIC\_INLINE void LL\_EXTI\_EnableIT\_32\_63 (uint32\_t ExtiLine)**

Function description      Enable ExtiLine Interrupt request for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL\_EXTI\_LINE\_32
  - LL\_EXTI\_LINE\_33
  - LL\_EXTI\_LINE\_34
  - LL\_EXTI\_LINE\_35
  - LL\_EXTI\_LINE\_36
  - LL\_EXTI\_LINE\_37
  - LL\_EXTI\_LINE\_38
  - LL\_EXTI\_LINE\_39
  - LL\_EXTI\_LINE\_ALL\_32\_63

Return values

- **None**

### LL\_EXTI\_IsEnabledIT\_32\_63

Function name `__STATIC_INLINE uint32_t LL_EXTI_IsEnabledIT_32_63  
(uint32_t ExtiLine)`

Function description Indicate if ExtiLine Interrupt request is enabled for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL\_EXTI\_LINE\_32
  - LL\_EXTI\_LINE\_33
  - LL\_EXTI\_LINE\_34
  - LL\_EXTI\_LINE\_35
  - LL\_EXTI\_LINE\_36
  - LL\_EXTI\_LINE\_37
  - LL\_EXTI\_LINE\_38
  - LL\_EXTI\_LINE\_39
  - LL\_EXTI\_LINE\_ALL\_32\_63

Return values

- **State:** of bit (1 or 0).

Notes

- The reset value for the direct lines (lines from 32 to 34, line 39) is set to 1 in order to enable the interrupt by default. Bits

are set automatically at Power on.

### **LL\_EXTI\_EnableEvent\_0\_31**

Function name **\_STATIC\_INLINE void LL\_EXTI\_EnableEvent\_0\_31 (uint32\_t ExtiLine)**

Function description Enable ExtiLine Event request for Lines in range 0 to 31.

Parameters • **ExtiLine:** This parameter can be one of the following values:

- LL\_EXTI\_LINE\_0
- LL\_EXTI\_LINE\_1
- LL\_EXTI\_LINE\_2
- LL\_EXTI\_LINE\_3
- LL\_EXTI\_LINE\_4
- LL\_EXTI\_LINE\_5
- LL\_EXTI\_LINE\_6
- LL\_EXTI\_LINE\_7
- LL\_EXTI\_LINE\_8
- LL\_EXTI\_LINE\_9

### LL\_EXTI\_EnableEvent\_32\_63

Function name

**`__STATIC_INLINE void LL_EXTI_EnableEvent_32_63 (uint32_t ExtiLine)`**

Function description

Enable ExtiLine Event request for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL\_EXTI\_LINE\_32
  - LL\_EXTI\_LINE\_33
  - LL\_EXTI\_LINE\_34
  - LL\_EXTI\_LINE\_35
  - LL\_EXTI\_LINE\_36
  - LL\_EXTI\_LINE\_37
  - LL\_EXTI\_LINE\_38
  - LL\_EXTI\_LINE\_39
  - LL\_EXTI\_LINE\_ALL\_32\_63

Return values

- **None**

### LL\_EXTI\_DisableEvent\_0\_31

Function name

**`__STATIC_INLINE void LL_EXTI_DisableEvent_0_31 (uint32_t ExtiLine)`**

Function description

Disable ExtiLine Event request for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be one of the following values:
  - LL\_EXTI\_LINE\_0
  - LL\_EXTI\_LINE\_1
  - LL\_EXTI\_LINE\_2
  - LL\_EXTI\_LINE\_3
  - LL\_EXTI\_LINE\_4

- LL\_EXTI\_LINE\_21
- LL\_EXTI\_LINE\_22
- LL\_EXTI\_LINE\_29
- LL\_EXTI\_LINE\_30
- LL\_EXTI\_LINE\_31

Return values

- **None**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a rising edge on a configurable interrupt line occurs during a write operation in the EXTI\_RTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.

reference:

### **LL\_EXTI\_DisableRisingTrig\_32\_63**

Function name

**STATIC\_INLINE void LL\_EXTI\_DisableRisingTrig\_32\_63  
(uint32\_t ExtiLine)**

Function description

Disable ExtiLine Rising Edge Trigger for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL\_EXTI\_LINE\_35
  - LL\_EXTI\_LINE\_36
  - LL\_EXTI\_LINE\_37
  - LL\_EXTI\_LINE\_38

Return values

- **None**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a rising edge on a configurable interrupt line occurs during a write operation in

the EXTI\_RTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.

### **LL\_EXTI\_IsEnabledRisingTrig\_0\_31**

Function name

`__STATIC_INLINE uint32_t  
LL_EXTI_IsEnabledRisingTrig_0_31 (uint32_t ExtiLine)`

Function description

Check if rising edge trigger is enabled for Lines in range 0 to 31.

Parameters

- ExtiLine:** This parameter can be a combination of the following values:
  - LL\_EXTI\_LINE\_0
  - LL\_EXTI\_LINE\_1
  - LL\_EXTI\_LINE\_2
  - LL\_EXTI\_LINE\_3
  - LL\_EXTI\_LINE\_4
  - LL\_EXTI\_LINE\_5
  - LL\_EXTI\_LINE\_6
  - LL\_EXTI\_LINE\_7
  - LL\_EXTI\_LINE\_8
  - LL\_EXTI\_LINE\_9

- LL\_EXTI\_LINE\_29
- LL\_EXTI\_LINE\_30
- LL\_EXTI\_LINE\_31

Return values

- **None**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a Falling edge on a configurable interrupt line occurs during a write operation in the EXTI\_FTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.
- Please check each device line mapping for EXTI Line availability

### **LL\_EXTI\_DisableFallingTrig\_32\_63**

Function name

**\_STATIC\_INLINE void LL\_EXTI\_DisableFallingTrig\_32\_63  
(uint32\_t ExtiLine)**

Function description

Disable ExtiLine Falling Edge Trigger for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL\_EXTI\_LINE\_35
  - LL\_EXTI\_LINE\_36
  - LL\_EXTI\_LINE\_37
  - LL\_EXTI\_LINE\_38

Return values

- **None**

Notes

- The configurable wakeup lines are edge-triggered. No glitch must be generated on these lines. If a Falling edge on a configurable interrupt line occurs during a write operation in the EXTI\_FTSR register, the pending bit is not set. Rising and falling edge triggers can be set for the same interrupt line. In this case, both generate a trigger condition.

### **LL\_EXTI\_IsEnabledFallingTrig\_0\_31**

Function name

`__STATIC_INLINE uint32_t`

`LL_EXTI_IsEnabledFallingTrig_0_31 (uint32_t ExtiLine)`

Function description

Check if falling edge trigger is enabled for Lines in range 0 to 31.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:

- `LL_EXTI_LINE_0`
- `LL_EXTI_LINE_1`
- `LL_EXTI_LINE_2`
- `LL_EXTI_LINE_3`
- `LL_EXTI_LINE_4`
- `LL_EXTI_LINE_5`
- `LL_EXTI_LINE_6`
- `LL_EXTI_LINE_7`
- `LL_EXTI_LINE_8`
- `LL_EXTI_LINE_9`
- `LL_EXTI_LINE_10`
- `LL_EXTI_LINE_11`
- `LL_EXTI_LINE_12`
- `LL_EXTI_LINE_13`
- `LL_EXTI_LINE_14`
- `LL_EXTI_LINE_15`
- `LL_EXTI_LINE_16`
- `LL_EXTI_LINE_18`
- `LL_EXTI_LINE_19`
- `LL_EXTI_LINE_20`
- `LL_EXTI_LINE_21`
- `LL_EXTI_LINE_22`
- `LL_EXTI_LINE_29`
- `LL_EXTI_LINE_30`
- `LL_EXTI_LINE_31`

Return values

- **State:** of bit (1 or 0).

Notes

- Please check each device line mapping for EXTI Line availability

Reference Manual to  
LL API cross  
reference:

- FTSR FTx LL\_EXTI\_IsEnabledFallingTrig\_0\_31

Function name

`__STATIC_INLINE uint32_t`

`LL_EXTI_IsEnabledFallingTrig_32_63 (uint32_t ExtiLine)`

Function description

Check if falling edge trigger is enabled for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:

- LL\_EXTI\_LINE\_35
  - LL\_EXTI\_LINE\_36
  - LL\_EXTI\_LINE\_37
  - LL\_EXTI\_LINE\_38
- Return values      • **State:** of bit (1 or 0).
- Reference Manual to  
LL API cross  
reference:      • FTSR2 FTx LL\_EXTI\_IsEnabledFallingTrig\_32\_63

### **LL\_EXTI\_GenerateSWI\_0\_31**

- Function name      **\_STATIC\_INLINE void LL\_EXTI\_GenerateSWI\_0\_31 (uint32\_t ExtiLine)**
- Function description      Generate a software Interrupt Event for Lines in range 0 to 31.
- Parameters      • **ExtiLine:** This parameter can be a combination of the following values:
  - LL\_EXTI\_LINE\_0
  - LL\_EXTI\_LINE\_1
  - LL\_EXTI\_LINE\_2
  - LL\_EXTI\_LINE\_3
  - LL\_EXTI\_LINE\_4
  - LL\_EXTI\_LINE\_5
  - LL\_EXTI\_LINE\_6
  - LL\_EXTI\_LINE\_7
  - LL\_EXTI\_LINE\_8
  - LL\_EXTI\_LINE\_9
  - LL\_EXTI\_LINE\_10
  - LL\_EXTI\_LINE\_11
  - LL\_EXTI\_LINE\_12
  - LL\_EXTI\_LINE\_13
  - LL\_EXTI\_LINE\_14
  - LL\_EXTI\_LINE\_15
  - LL\_EXTI\_LINE\_16
  - LL\_EXTI\_LINE\_18
  - LL\_EXTI\_LINE\_19
  - LL\_EXTI\_LINE\_20
  - LL\_EXTI\_LINE\_21
  - LL\_EXTI\_LINE\_22
  - LL\_EXTI\_LINE\_29
  - LL\_EXTI\_LINE\_30
  - LL\_EXTI\_LINE\_31
- Return values      • **None**
- Notes      • If the interrupt is enabled on this line in the EXTI\_IMR, writing a 1 to this bit when it is at '0' sets the corresponding pending bit in EXTI\_PR resulting in an interrupt request generation. This bit is cleared by clearing the corresponding bit in the EXTI\_PR register (by writing a 1 into the bit)
  - Please check each device line mapping for EXTI Line availability

### **LL\_EXTI\_GenerateSWI\_32\_63**

Function name

**\_STATIC\_INLINE void LL\_EXTI\_GenerateSWI\_32\_63  
(uint32\_t ExtiLine)**

Function description

Generate a software Interrupt Event for Lines in range 32 to 63.

Parameters

- **ExtiLine:** This parameter can be a combination of the following values:
  - LL\_EXTI\_LINE\_35
  - LL\_EXTI\_LINE\_36
  - LL\_EXTI\_LINE\_37
  - LL\_EXTI\_LINE\_38

Return values

- **None**

Notes

- If the interrupt is enabled on this line inthe EXTI\_IMR2, writing a 1 to this bit when it is at '0' sets the corresponding pending bit in EXTI\_PR2 resulting in an interrupt request generation. This bit is cleared by clearing the corresponding bit in the EXTI\_PR2 register (by writing a 1 into the bit)

- `__REG__`: Register to be read

**Return value:**

- Register: value

## 67 LL GPIO Generic Driver

### 67.1 GPIO Firmware driver registers structures

#### 67.1.1 LL\_GPIO\_InitTypeDef

##### Data Fields

- *uint32\_t Pin*
- *uint32\_t Mode*
- *uint32\_t Speed*
- *uint32\_t OutputType*
- *uint32\_t Pull*
- *uint32\_t Alternate*

##### Field Documentation

- ***uint32\_t LL\_GPIO\_InitTypeDef::Pin***  
Specifies the GPIO pins to be configured. This parameter can be any value of [\*\*GPIO\\_LL\\_EC\\_PIN\*\*](#)
- ***uint32\_t LL\_GPIO\_InitTypeDef::Mode***  
Specifies the operating mode for the selected pins. This parameter can be a value of [\*\*GPIO\\_LL\\_EC\\_MODE\*\*](#).GPIO HW configuration can be modified afterwards using unitary function [\*\*LL\\_GPIO\\_SetPinMode\(\)\*\*](#).
- ***uint32\_t LL\_GPIO\_InitTypeDef::Speed***  
Specifies the speed for the selected pins. This parameter can be a value of [\*\*GPIO\\_LL\\_EC\\_SPEED\*\*](#).GPIO HW configuration can be modified afterwards using unitary function [\*\*LL\\_GPIO\\_SetPinSpeed\(\)\*\*](#).
- ***uint32\_t LL\_GPIO\_InitTypeDef::OutputType***  
Specifies the operating output type for the selected pins. This parameter can be a value of [\*\*GPIO\\_LL\\_EC\\_OUTPUT\*\*](#).GPIO HW configuration can be modified afterwards using unitary function [\*\*LL\\_GPIO\\_SetPinOutputType\(\)\*\*](#).
- ***uint32\_t LL\_GPIO\_InitTypeDef::Pull***  
Specifies the operating Pull-up/Pull down for the selected pins. This parameter can be a value of [\*\*GPIO\\_LL\\_EC\\_PULL\*\*](#).GPIO HW configuration can be modified afterwards using unitary function [\*\*LL\\_GPIO\\_SetPinPull\(\)\*\*](#).
- ***uint32\_t LL\_GPIO\_InitTypeDef::Alternate***  
Specifies the Peripheral to be connected to the selected pins. This parameter can be a value of [\*\*GPIO\\_LL\\_EC\\_AF\*\*](#).GPIO HW configuration can be modified afterwards using unitary function [\*\*LL\\_GPIO\\_SetAFPin\\_0\\_7\(\)\*\*](#) and [\*\*LL\\_GPIO\\_SetAFPin\\_8\\_15\(\)\*\*](#).

### 67.2 GPIO Firmware driver API description

#### 67.2.1 Detailed description of functions

##### LL\_GPIO\_SetPinMode

Function name      `_STATIC_INLINE void LL_GPIO_SetPinMode (GPIO_TypeDef * GPIOx, uint32_t Pin, uint32_t Mode)`

Function description      Configure gpio mode for a dedicated pin on dedicated port.

Parameters     
 

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:

- LL\_GPIO\_PIN\_0
- LL\_GPIO\_PIN\_1
- LL\_GPIO\_PIN\_2
- LL\_GPIO\_PIN\_3
- LL\_GPIO\_PIN\_4
- LL\_GPIO\_PIN\_5
- LL\_GPIO\_PIN\_6
- LL\_GPIO\_PIN\_7
- LL\_GPIO\_PIN\_8
- LL\_GPIO\_PIN\_9
- LL\_GPIO\_PIN\_10
- LL\_GPIO\_PIN\_11
- LL\_GPIO\_PIN\_12
- LL\_GPIO\_PIN\_13
- LL\_GPIO\_PIN\_14
- LL\_GPIO\_PIN\_15
- **Mode:** This parameter can be one of the following values:
  - LL\_GPIO\_MODE\_INPUT
  - LL\_GPIO\_MODE\_OUTPUT
  - LL\_GPIO\_MODE\_ALTERNATE
  - LL\_GPIO\_MODE\_ANALOG

Return values

- **None**

Notes

- I/O mode can be Input mode, General purpose output, Alternate function mode or Analog.
- Warning: only one pin can be passed as parameter.

Reference Manual to  
LL API cross  
reference:

- MODER MODEy LL\_GPIO\_SetPinMode

### **LL\_GPIO\_GetPinMode**

Function name

`__STATIC_INLINE uint32_t LL_GPIO_GetPinMode  
(GPIO_TypeDef * GPIOx, uint32_t Pin)`

Function description

Return gpio mode for a dedicated pin on dedicated port.

Parameters

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL\_GPIO\_PIN\_0
  - LL\_GPIO\_PIN\_1
  - LL\_GPIO\_PIN\_2
  - LL\_GPIO\_PIN\_3
  - LL\_GPIO\_PIN\_4
  - LL\_GPIO\_PIN\_5
  - LL\_GPIO\_PIN\_6
  - LL\_GPIO\_PIN\_7
  - LL\_GPIO\_PIN\_8
  - LL\_GPIO\_PIN\_9
  - LL\_GPIO\_PIN\_10
  - LL\_GPIO\_PIN\_11
  - LL\_GPIO\_PIN\_12
  - LL\_GPIO\_PIN\_13

**\_STATIC\_INLINE uint32\_t LL\_GPIO\_GetAFPin\_0\_7  
(GPIO\_TypeDef \* GPIOx, uint32\_t Pin)**

**Function description**

Return gpio alternate function of a dedicated pin from 0 to 7 for a dedicated port.

**Parameters**

- **GPIOx:** GPIO Port
- **Pin:** This parameter can be one of the following values:
  - LL\_GPIO\_PIN\_0
  - LL\_GPIO\_PIN\_1
  - LL\_GPIO\_PIN\_2
  - LL\_GPIO\_PIN\_3
  - LL\_GPIO\_PIN\_4
  - LL\_GPIO\_PIN\_5
  - LL\_GPIO\_PIN\_6
  - LL\_GPIO\_PIN\_7

**Return values**

- **Returned:** value can be one of the following values:
  - LL\_GPIO\_AF\_0
  - LL\_GPIO\_AF\_1
  - LL\_GPIO\_AF\_2
  - LL\_GPIO\_AF\_3
  - LL\_GPIO\_AF\_4

- LL\_GPIO\_PIN\_11
- LL\_GPIO\_PIN\_12
- LL\_GPIO\_PIN\_13
- LL\_GPIO\_PIN\_14
- LL\_GPIO\_PIN\_15
- LL\_GPIO\_PIN\_ALL

Return values

- **None**

Notes

- When the lock sequence has been applied on a port bit, the value of this port bit can no longer be modified until the next reset.
- Each lock bit freezes a specific configuration register (control and alternate function registers).

### **LL\_GPIO\_IsPinLocked**

Function name

`_STATIC_INLINE uint32_t LL_GPIO_IsPinLocked  
(GPIO_TypeDef * GPIOx, uint32_t PinMask)`

Function description

Return 1 if all pins passed as parameter, of a dedicated port, are locked.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:
  - LL\_GPIO\_PIN\_0
  - LL\_GPIO\_PIN\_1
  - LL\_GPIO\_PIN\_2
  - LL\_GPIO\_PIN\_3
  - LL\_GPIO\_PIN\_4
  - LL\_GPIO\_PIN\_5
  - LL\_GPIO\_PIN\_6
  - LL\_GPIO\_PIN\_7
  - LL\_GPIO\_PIN\_8
  - LL\_GPIO\_PIN\_9
  - LL\_GPIO\_PIN\_10
  - LL\_GPIO\_PIN\_11
  - LL\_GPIO\_PIN\_12
  - LL\_GPIO\_PIN\_13
  - LL\_GPIO\_PIN\_14
  - LL\_GPIO\_PIN\_15
  - LL\_GPIO\_PIN\_ALL

### LL\_GPIO\_SetOutputPin

Function name

`__STATIC_INLINE void LL_GPIO_SetOutputPin  
(GPIO_TypeDef * GPIOx, uint32_t PinMask)`

Function description

Set several pins to high level on dedicated gpio port.

Parameters

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:

- LL\_GPIO\_PIN\_0
- LL\_GPIO\_PIN\_1
- LL\_GPIO\_PIN\_2
- LL\_GPIO\_PIN\_3
- LL\_GPIO\_PIN\_4
- LL\_GPIO\_PIN\_5
- LL\_GPIO\_PIN\_6

**LL\_GPIO\_ResetOutputPin**

Function name      **`_STATIC_INLINE void LL_GPIO_ResetOutputPin  
(GPIO_TypeDef * GPIOx, uint32_t PinMask)`**

Function description      Set several pins to low level on dedicated gpio port.

Parameters     
 

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:

- LL\_GPIO\_PIN\_0
- LL\_GPIO\_PIN\_1
- LL\_GPIO\_PIN\_2
- LL\_GPIO\_PIN\_3
- LL\_GPIO\_PIN\_4
- LL\_GPIO\_PIN\_5
- LL\_GPIO\_PIN\_6
- LL\_GPIO\_PIN\_7
- LL\_GPIO\_PIN\_8
- LL\_GPIO\_PIN\_9
- LL\_GPIO\_PIN\_10
- LL\_GPIO\_PIN\_11
- LL\_GPIO\_PIN\_12
- LL\_GPIO\_PIN\_13
- LL\_GPIO\_PIN\_14
- LL\_GPIO\_PIN\_15
- LL\_GPIO\_PIN\_ALL

Return values     
 

- **None**

**LL\_GPIO\_TogglePin**

Function name      **`_STATIC_INLINE void LL_GPIO_TogglePin (GPIO_TypeDef *  
GPIOx, uint32_t PinMask)`**

Function description      Toggle data value for several pin of dedicated port.

Parameters     
 

- **GPIOx:** GPIO Port
- **PinMask:** This parameter can be a combination of the following values:

- LL\_GPIO\_PIN\_0
- LL\_GPIO\_PIN\_1
- LL\_GPIO\_PIN\_2
- LL\_GPIO\_PIN\_3
- LL\_GPIO\_PIN\_4
- LL\_GPIO\_PIN\_5
- LL\_GPIO\_PIN\_6
- LL\_GPIO\_PIN\_7
- LL\_GPIO\_PIN\_8
- LL\_GPIO\_PIN\_9
- LL\_GPIO\_PIN\_10
- LL\_GPIO\_PIN\_11

- LL\_GPIO\_PIN\_12
- LL\_GPIO\_PIN\_13
- LL\_GPIO\_PIN\_14
- LL\_GPIO\_PIN\_15
- LL\_GPIO\_PIN\_ALL

**Return values**

- **None**

| LL_GPIO_AF_15 | Select alternate function 15 |

#### *Mode*

|                        |                                |
|------------------------|--------------------------------|
| LL_GPIO_MODE_INPUT     | Select input mode              |
| LL_GPIO_MODE_OUTPUT    | Select output mode             |
| LL_GPIO_MODE_ALTERNATE | Select alternate function mode |
| LL_GPIO_MODE_ANALOG    | Select analog mode             |

#### *Output Type*

|                          |                                  |
|--------------------------|----------------------------------|
| LL_GPIO_OUTPUT_PUSHPULL  | Select push-pull as output type  |
| LL_GPIO_OUTPUT_OPENDRAIN | Select open-drain as output type |

#### *PIN*

|               |              |
|---------------|--------------|
| LL_GPIO_PIN_0 | Select pin 0 |
| LL_GPIO_PIN_1 | Select pin 1 |
| LL_GPIO_PIN_2 | Select pin 2 |
| LL_GPIO_PIN_3 | Select pin 3 |
| LL_GPIO_PIN_4 | Select pin 4 |
| LL_GPIO_PIN_5 | Select pin 5 |
| LL_GPIO_PIN_6 | Select pin 6 |
| LL_GPIO_PIN_7 | Select pin 7 |

---

|                 |                 |
|-----------------|-----------------|
| LL_GPIO_PIN_8   | Select pin 8    |
| LL_GPIO_PIN_9   | Select pin 9    |
| LL_GPIO_PIN_10  | Select pin 10   |
| LL_GPIO_PIN_11  | Select pin 11   |
| LL_GPIO_PIN_12  | Select pin 12   |
| LL_GPIO_PIN_13  | Select pin 13   |
| LL_GPIO_PIN_14  | Select pin 14   |
| LL_GPIO_PIN_15  | Select pin 15   |
| LL_GPIO_PIN_ALL | Select all pins |

**Pull Up Pull Down**

|                   |                      |
|-------------------|----------------------|
| LL_GPIO_PULL_NO   | Select I/O no pull   |
| LL_GPIO_PULL_UP   | Select I/O pull up   |
| LL_GPIO_PULL_DOWN | Select I/O pull down |

**Output Speed**

|                           |                                |
|---------------------------|--------------------------------|
| LL_GPIO_SPEED_FREQ_LOW    | Select I/O low output speed    |
| LL_GPIO_SPEED_FREQ_MEDIUM | Select I/O medium output speed |
| LL_GPIO_SPEED_FREQ_HIGH   | Select I/O high output speed   |

**Common Write and read registers Macros**

**LL\_GPIO\_WriteReg**      **Description:**

- Write a value in GPIO register.

**Parameters:**

- `__INSTANCE__`: GPIO Instance
- `__REG__`: Register to be written
- `__VALUE__`: Value to be written in the register

**Return value:**

- None

**LL\_GPIO\_ReadReg**      **Description:**

- Read a value in GPIO register.

**Parameters:**

- `__INSTANCE__`: GPIO Instance
- `__REG__`: Register to be read

**Return value:**

- Register: value

**LL\_HRTIM\_SetSyncOutConfig****Function name**

```
__STATIC_INLINE void LL_HRTIM_SetSyncOutConfig
(HRTIM_TypeDef * HRTIMx, uint32_t SyncOutConfig)
```

**Function description**

Set the routing and conditioning of the synchronization output event.

**Parameters**

- **HRTIMx:** High Resolution Timer instance
- **SyncOutConfig:** This parameter can be one of the following values:
  - LL\_HRTIM\_SYNCOUT\_DISABLED
  - LL\_HRTIM\_SYNCOUT\_POSITIVE\_PULSE
  - LL\_HRTIM\_SYNCOUT\_NEGATIVE\_PULSE

**Return values**

- **None**

**Notes**

- This function can be called only when the master timer is enabled.

### LL\_HRTIM\_GetADCTrigSrc

Function name **`_STATIC_INLINE uint32_t LL_HRTIM_GetADCTrigSrc(  
HRTIM_TypeDef * HRTIMx, uint32_t ADCTrig)`**

Function description Indicate which events (timer events and/or external events) are currently used as triggers for ADC conversion.

Parameters
 

- **HRTIMx:** High Resolution Timer instance
- **ADCTrig:** This parameter can be one of the following values:
  - `LL_HRTIM_ADCTRIG_1`
  - `LL_HRTIM_ADCTRIG_2`

|                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Function description | Set the functioning mode of the compare unit (CMP2 or CMP4 can operate in standard mode or in auto delayed mode).                                                                                                                                                                                                                                                   |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>HRTIMx:</b> High Resolution Timer instance</li> <li>• <b>Timer:</b> This parameter can be one of the following values: <ul style="list-style-type: none"> <li>- LL_HRTIM_TIMER_A</li> <li>- LL_HRTIM_TIMER_B</li> <li>- LL_HRTIM_TIMER_C</li> <li>- LL_HRTIM_TIMER_D</li> <li>- LL_HRTIM_TIMER_E</li> </ul> </li> </ul> |

- **CompareUnit:** This parameter can be one of the following values:
    - LL\_HRTIM\_COMPAREUNIT\_2
    - LL\_HRTIM\_COMPAREUNIT\_4
  - **Mode:** This parameter can be one of the following values:
    - LL\_HRTIM\_COMPAREMODE\_REGULAR
    - LL\_HRTIM\_COMPAREMODE\_DELAY\_NOTIMEOUT
    - LL\_HRTIM\_COMPAREMODE\_DELAY\_CMP1
    - LL\_HRTIM\_COMPAREMODE\_DELAY\_CMP3
- Return values**
- **None**
- Notes**
- In auto-delayed mode the compare match occurs independently from the timer counter value.
- Reference Manual to LL API cross reference:**
- TIMxCR DELCMP2 LL\_HRTIM\_TIM\_SetCompareMode
  - TIMxCR DELCMP4 LL\_HRTIM\_TIM\_SetCompareMode

### **LL\_HRTIM\_TIM\_SetCompare3**

Function name

**`__STATIC_INLINE void LL_HRTIM_TIM_SetCompare3(  
 HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t  
 CompareValue)`**

Function description

Set the compare value of the compare unit 3.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E
- **CompareValue:** Compare value must be above or equal to 3 periods of the fHRTIM clock, that is 0x60 if CKPSC[2:0] = 0, 0x30 if CKPSC[2:0] = 1, 0x18 if CKPSC[2:0] = 2,...

Return values

- **None**

**Return values**

- **None**

**Notes**

- The reset of the timer counter can be triggered by up to 30 events that can be selected among the following sources: The timing unit: Compare 2, Compare 4 and Update (3 events). The master timer: Reset and Compare 1..4 (5 events). The external events EXTEVNT1..10 (10 events). All other timing units (e.g. Timer B..E for timer A): Compare 1, 2 and 4 (12 events).

**LL\_HRTIM\_DT\_SetPrescaler**

Function name

**STATIC\_INLINE void LL\_HRTIM\_DT\_SetPrescaler  
(HRTIM\_TypeDef \* HRTIMx, uint32\_t Timer, uint32\_t Prescaler)**

Function description

Set the deadtime prescaler value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E
- **Prescaler:** This parameter can be one of the following values:
  - LL\_HRTIM\_DT\_PRESCALER\_MUL8
  - LL\_HRTIM\_DT\_PRESCALER\_MUL4
  - LL\_HRTIM\_DT\_PRESCALER\_MUL2
  - LL\_HRTIM\_DT\_PRESCALER\_DIV1

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- DTxR DTPRSC LL\_HRTIM\_DT\_SetPrescaler

**LL\_HRTIM\_DT\_GetPrescaler**

Function name

**STATIC\_INLINE uint32\_t LL\_HRTIM\_DT\_GetPrescaler  
(HRTIM\_TypeDef \* HRTIMx, uint32\_t Timer)**

Function description

Get actual deadtime prescaler value.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:

|                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

### **LL\_HRTIM\_DT\_GetFallingSign**

- Function name      **`_STATIC_INLINE uint32_t LL_HRTIM_DT_GetFallingSign(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**
- Function description      Get actual deadtime sign on falling edge.
- Parameters
  - **HRTIMx:** High Resolution Timer instance
  - **Timer:** This parameter can be one of the following values:
    - LL\_HRTIM\_TIMER\_A
    - LL\_HRTIM\_TIMER\_B
    - LL\_HRTIM\_TIMER\_C
    - LL\_HRTIM\_TIMER\_D
    - LL\_HRTIM\_TIMER\_E
- Return values
  - **FallingSign:** This parameter can be one of the following values:
    - LL\_HRTIM\_DT\_FALLING\_POSITIVE
    - LL\_HRTIM\_DT\_FALLING\_NEGATIVE
- Reference Manual to LL API cross reference:
  - DTxR SDTF LL\_HRTIM\_DT\_GetFallingSign

### **LL\_HRTIM\_DT\_LockRising**

- Function name      **`_STATIC_INLINE void LL_HRTIM_DT_LockRising(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**
- Function description      Lock the deadtime value and sign on rising edge.
- Parameters
  - **HRTIMx:** High Resolution Timer instance
  - **Timer:** This parameter can be one of the following values:
    - LL\_HRTIM\_TIMER\_A
    - LL\_HRTIM\_TIMER\_B
    - LL\_HRTIM\_TIMER\_C
    - LL\_HRTIM\_TIMER\_D
    - LL\_HRTIM\_TIMER\_E
- Return values
  - **None**
- Reference Manual to LL API cross reference:
  - DTxR DTRLK LL\_HRTIM\_DT\_LockRising

**LL\_HRTIM\_CHP\_GetPrescaler**

**Function name** `__STATIC_INLINE uint32_t LL_HRTIM_CHP_GetPrescaler(  
HRTIM_TypeDef * HRTIMx, uint32_t Timer)`

**Function description** Get actual chopper stage prescaler value.

**Parameters**

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

**Return values**

- **Prescaler:** This parameter can be one of the following values:
  - LL\_HRTIM\_CHP\_PRESCALER\_DIV16
  - LL\_HRTIM\_CHP\_PRESCALER\_DIV32
  - LL\_HRTIM\_CHP\_PRESCALER\_DIV48
  - LL\_HRTIM\_CHP\_PRESCALER\_DIV64
  - LL\_HRTIM\_CHP\_PRESCALER\_DIV80
  - LL\_HRTIM\_CHP\_PRESCALER\_DIV96

### LL\_HRTIM\_CHP\_SetPulseWidth

Function name      **`__STATIC_INLINE void LL_HRTIM_CHP_SetPulseWidth(HRTIM_TypeDef * HRTIMx, uint32_t Timer, uint32_t PulseWidth)`**

Function description      Set the start pulse width.

Parameters     
 

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E
- **PulseWidth:** This parameter can be one of the following values:
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_16
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_32
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_48
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_64
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_80
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_96
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_112
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_128
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_144
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_160
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_176
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_192
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_208
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_224
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_240
  - LL\_HRTIM\_CHP\_PULSEWIDTH\_256

Return values     
 

- **None**

Notes     
 

- This function must not be called if the chopper mode is already enabled for one of the timer outputs.

### **LL\_HRTIM\_OUT\_SetPolarity**

Function name

**\_STATIC\_INLINE void LL\_HRTIM\_OUT\_SetPolarity(  
(HRTIM\_TypeDef \* HRTIMx, uint32\_t Output, uint32\_t Polarity)**

Function description

Set the polarity of a timer output.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL\_HRTIM\_OUTPUT\_TA1
  - LL\_HRTIM\_OUTPUT\_TA2
  - LL\_HRTIM\_OUTPUT\_TB1
  - LL\_HRTIM\_OUTPUT\_TB2

- LL\_HRTIM\_OUTPUT\_TC1
- LL\_HRTIM\_OUTPUT\_TC2
- LL\_HRTIM\_OUTPUT\_TD1
- LL\_HRTIM\_OUTPUT\_TD2
- LL\_HRTIM\_OUTPUT\_TE1
- LL\_HRTIM\_OUTPUT\_TE2
- **Polarity:** This parameter can be one of the following values:
  - LL\_HRTIM\_OUT\_POSITIVE\_POLARITY
  - LL\_HRTIM\_OUT\_NEGATIVE\_POLARITY

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

**LL\_HRTIM\_OUT\_GetPolarity**

Function name

```
_STATIC_INLINE uint32_t LL_HRTIM_OUT_GetPolarity
(HRTIM_TypeDef * HRTIMx, uint32_t Output)
```

Function description

Get actual polarity of the timer output.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL\_HRTIM\_OUTPUT\_TA1
  - LL\_HRTIM\_OUTPUT\_TA2
  - LL\_HRTIM\_OUTPUT\_TB1
  - LL\_HRTIM\_OUTPUT\_TB2
  - LL\_HRTIM\_OUTPUT\_TC1
  - LL\_HRTIM\_OUTPUT\_TC2
  - LL\_HRTIM\_OUTPUT\_TD1
  - LL\_HRTIM\_OUTPUT\_TD2
  - LL\_HRTIM\_OUTPUT\_TE1
  - LL\_HRTIM\_OUTPUT\_TE2

Return values

- **Polarity:** This parameter can be one of the following values:
  - LL\_HRTIM\_OUT\_POSITIVE\_POLARITY
  - LL\_HRTIM\_OUT\_NEGATIVE\_POLARITY

Reference Manual to  
LL API cross  
reference:

**LL\_HRTIM\_OUT\_SetIdleMode**

Function name

```
_STATIC_INLINE void LL_HRTIM_OUT_SetIdleMode
(HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t
IdleMode)
```

Function description

Set the output IDLE mode.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Output:** This parameter can be one of the following values:
  - LL\_HRTIM\_OUTPUT\_TA1
  - LL\_HRTIM\_OUTPUT\_TA2
  - LL\_HRTIM\_OUTPUT\_TB1

### **LL\_HRTIM\_OUT\_SetChopperMode**

Function name      **`__STATIC_INLINE void LL_HRTIM_OUT_SetChopperMode(HRTIM_TypeDef * HRTIMx, uint32_t Output, uint32_t ChopperMode)`**

Function description      Set the output chopper mode.

- Parameters
- **HRTIMx:** High Resolution Timer instance
  - **Output:** This parameter can be one of the following values:
    - LL\_HRTIM\_OUTPUT\_TA1
    - LL\_HRTIM\_OUTPUT\_TA2
    - LL\_HRTIM\_OUTPUT\_TB1
    - LL\_HRTIM\_OUTPUT\_TB2
    - LL\_HRTIM\_OUTPUT\_TC1
    - LL\_HRTIM\_OUTPUT\_TC2
    - LL\_HRTIM\_OUTPUT\_TD1
    - LL\_HRTIM\_OUTPUT\_TD2
    - LL\_HRTIM\_OUTPUT\_TE1
    - LL\_HRTIM\_OUTPUT\_TE2
  - **ChopperMode:** This parameter can be one of the following values:
    - LL\_HRTIM\_OUT\_CHOPPERMODE\_DISABLED
    - LL\_HRTIM\_OUT\_CHOPPERMODE\_ENABLED

Return values      • **None**

Notes      • This function must not be called when the timer is enabled.

### **LL\_HRTIM\_OUT\_GetChopperMode**

Function name      **`__STATIC_INLINE uint32_t LL_HRTIM_OUT_GetChopperMode(HRTIM_TypeDef * HRTIMx, uint32_t Output)`**

Function description      Get actual output chopper mode.

- Parameters
- **HRTIMx:** High Resolution Timer instance
  - **Output:** This parameter can be one of the following values:
    - LL\_HRTIM\_OUTPUT\_TA1
    - LL\_HRTIM\_OUTPUT\_TA2
    - LL\_HRTIM\_OUTPUT\_TB1
    - LL\_HRTIM\_OUTPUT\_TB2
    - LL\_HRTIM\_OUTPUT\_TC1
    - LL\_HRTIM\_OUTPUT\_TC2

## Function name

```
STATIC_INLINE uint32_t LL_HRTIM_EE_GetFilter
(HRTIM_TypeDef * HRTIMx, uint32_t Event)
```

## Function description

Get actual digital noise filter setting of a external event.

## Parameters

- **HRTIMx:** High Resolution Timer instance
- **Event:** This parameter can be one of the following values:
  - LL\_HRTIM\_EVENT\_6
  - LL\_HRTIM\_EVENT\_7
  - LL\_HRTIM\_EVENT\_8
  - LL\_HRTIM\_EVENT\_9
  - LL\_HRTIM\_EVENT\_10

## Return values

- **Filter:** This parameter can be one of the following values:
  - LL\_HRTIM\_EE\_FILTER\_NONE
  - LL\_HRTIM\_EE\_FILTER\_1
  - LL\_HRTIM\_EE\_FILTER\_2
  - LL\_HRTIM\_EE\_FILTER\_3

### **LL\_HRTIM\_IsActiveFlag\_FLT1**

Function name

**`_STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_FLT1  
(HRTIM_TypeDef * HRTIMx)`**

Function description

Indicate whether Fault 1 interrupt occurred.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT1 bit in HRTIM\_ISR register (1 or 0).

Reference Manual to

LL API cross  
reference:

- ICR FLT1 LL\_HRTIM\_IsActiveFlag\_FLT1

### **LL\_HRTIM\_ClearFlag\_FLT2**

Function name

**`_STATIC_INLINE void LL_HRTIM_ClearFlag_FLT2  
(HRTIM_TypeDef * HRTIMx)`**

Function description

Clear the Fault 2 interrupt flag.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None**

Reference Manual to

### **LL\_HRTIM\_IsActiveFlag\_FLT5**

Function name      **`_STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_FLT5  
(HRTIM_TypeDef * HRTIMx)`**

Function description      Indicate whether Fault 5 interrupt occurred.

Parameters      • **HRTIMx:** High Resolution Timer instance

Return values      • **State:** of FLT5 bit in HRTIM\_ISR register (1 or 0).

Reference Manual to  
LL API cross  
reference:

- ICR FLT5 LL\_HRTIM\_IsActiveFlag\_FLT5

### **LL\_HRTIM\_ClearFlag\_SYSFLT**

Function name      **`_STATIC_INLINE void LL_HRTIM_ClearFlag_SYSFLT  
(HRTIM_TypeDef * HRTIMx)`**

Function description      Clear the System Fault interrupt flag.

Parameters      • **HRTIMx:** High Resolution Timer instance

Return values      • **None**

Reference Manual to  
LL API cross  
reference:

- ISR SYSFLTC LL\_HRTIM\_ClearFlag\_SYSFLT

### **LL\_HRTIM\_IsActiveFlag\_SYSFLT**

Function name      **`_STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_SYSFLT  
(HRTIM_TypeDef * HRTIMx)`**

Function description      Indicate whether System Fault interrupt occurred.

Parameters      • **HRTIMx:** High Resolution Timer instance

Return values      • **State:** of SYSFLT bit in HRTIM\_ISR register (1 or 0).

Reference Manual to  
LL API cross  
reference:

- ISR SYSFLT LL\_HRTIM\_IsActiveFlag\_SYSFLT

### **LL\_HRTIM\_ClearFlag\_DLLRDY**

Function name      **`_STATIC_INLINE void LL_HRTIM_ClearFlag_DLLRDY  
(HRTIM_TypeDef * HRTIMx)`**

Function description      Clear the DLL ready interrupt flag.

Parameters      • **HRTIMx:** High Resolution Timer instance

Return values      • **None**

- ICR DLLRDYC LL\_HRTIM\_ClearFlag\_DLLRDY

### **LL\_HRTIM\_ClearFlag REP**

Function name      **`_STATIC_INLINE void LL_HRTIM_ClearFlag REP  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description      Clear the repetition interrupt flag for a given timer (including the master timer).

- Parameters
- **HRTIMx:** High Resolution Timer instance
  - **Timer:** This parameter can be one of the following values:
    - LL\_HRTIM\_TIMER\_MASTER
    - LL\_HRTIM\_TIMER\_A
    - LL\_HRTIM\_TIMER\_B
    - LL\_HRTIM\_TIMER\_C
    - LL\_HRTIM\_TIMER\_D
    - LL\_HRTIM\_TIMER\_E

- Return values
- **None**

### **LL\_HRTIM\_IsActiveFlag\_SET1**

Function name

**`_STATIC_INLINE uint32_t LL_HRTIM_IsActiveFlag_SET1  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Indicate whether the output 1 set interrupt occurred for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **State:** of SETx1 bit in HRTIM\_TIMxISR register (1 or 0).

### **LL\_HRTIM\_ClearFlag\_RST1**

Function name

**`_STATIC_INLINE void LL_HRTIM_ClearFlag_RST1  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Clear the output 1 reset interrupt flag for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **None**

### **LL\_HRTIM\_DisableIT\_FLT2**

Function name

**\_STATIC\_INLINE void LL\_HRTIM\_DisableIT\_FLT2  
(HRTIM\_TypeDef \* HRTIMx)**

Function description

Disable the fault 2 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None**

Reference Manual to

LL API cross  
reference:

- IER FLT2IE LL\_HRTIM\_DisableIT\_FLT2

### **LL\_HRTIM\_IsEnabledIT\_FLT2**

Function name

**\_STATIC\_INLINE uint32\_t LL\_HRTIM\_IsEnabledIT\_FLT2  
(HRTIM\_TypeDef \* HRTIMx)**

Function description

Indicate whether the fault 2 interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of FLT2IE bit in HRTIM\_IER register (1 or 0).

Reference Manual to

LL API cross  
reference:

- IER FLT2IE LL\_HRTIM\_IsEnabledIT\_FLT2

### **LL\_HRTIM\_EnableIT\_FLT3**

Function name

**\_STATIC\_INLINE void LL\_HRTIM\_EnableIT\_FLT3  
(HRTIM\_TypeDef \* HRTIMx)**

Function description

Enable the fault 3 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None**

Reference Manual to

LL API cross  
reference:

- IER FLT3IE LL\_HRTIM\_EnableIT\_FLT3

### **LL\_HRTIM\_DisableIT\_FLT3**

Function name

**\_STATIC\_INLINE void LL\_HRTIM\_DisableIT\_FLT3  
(HRTIM\_TypeDef \* HRTIMx)**

Function description

Disable the fault 3 interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- IER FLT3IE LL\_HRTIM\_DisableIT\_FLT3

### **LL\_HRTIM\_EnableIT\_SYNC**

Function name

**`_STATIC_INLINE void LL_HRTIM_EnableIT_SYNC  
(HRTIM_TypeDef * HRTIMx)`**

Function description

Enable the synchronization input interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None**

Reference Manual to

LL API cross  
reference:

- MDIER SYNCIE LL\_HRTIM\_EnableIT\_SYNC

### **LL\_HRTIM\_DisableIT\_SYNC**

Function name

**`_STATIC_INLINE void LL_HRTIM_DisableIT_SYNC  
(HRTIM_TypeDef * HRTIMx)`**

Function description

Disable the synchronization input interrupt.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **None**

Reference Manual to

LL API cross  
reference:

- MDIER SYNCIE LL\_HRTIM\_DisableIT\_SYNC

### **LL\_HRTIM\_IsEnabledIT\_SYNC**

Function name

**`_STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_SYNC  
(HRTIM_TypeDef * HRTIMx)`**

Function description

Indicate whether the synchronization input interrupt is enabled.

Parameters

- **HRTIMx:** High Resolution Timer instance

Return values

- **State:** of SYNCIE bit in HRTIM\_MDIER register (1 or 0).

Reference Manual to

LL API cross  
reference:

- MDIER SYNCIE LL\_HRTIM\_IsEnabledIT\_SYNC

### **LL\_HRTIM\_EnableIT\_UPDATE**

Function name

**`_STATIC_INLINE void LL_HRTIM_EnableIT_UPDATE  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Enable the update interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B

- LL\_HRTIM\_TIMER\_C
- LL\_HRTIM\_TIMER\_D
- LL\_HRTIM\_TIMER\_E

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- MDIER MUPDIE LL\_HRTIM\_EnableIT\_UPDATE

### **LL\_HRTIM\_DisableIT\_UPDATE**

Function name

**`__STATIC_INLINE void LL_HRTIM_DisableIT_UPDATE(  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Disable the update interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- MDIER MUPDIE LL\_HRTIM\_DisableIT\_UPDATE
- TIMxDIER UPDIE LL\_HRTIM\_DisableIT\_UPDATE

### **LL\_HRTIM\_IsEnabledIT\_UPDATE**

Function name

**`__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_UPDATE(  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Indicate whether the update interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **State:** of MUPDIE/UPDIE bit in  
HRTIM\_MDIER/HRTIM\_TIMxDIER register (1 or 0).

### LL\_HRTIM\_EnableIT\_CMP1

- Function name**
- ```
__STATIC_INLINE void LL_HRTIM_EnableIT_CMP1
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)
```
- Function description**
- Enable the compare 1 interrupt for a given timer.
- Parameters**
- **HRTIMx:** High Resolution Timer instance
 - **Timer:** This parameter can be one of the following values:
 - LL_HRTIM_TIMER_MASTER
 - LL_HRTIM_TIMER_A
 - LL_HRTIM_TIMER_B
 - LL_HRTIM_TIMER_C
 - LL_HRTIM_TIMER_D
 - LL_HRTIM_TIMER_E
- Return values**
- **None**
- Reference Manual to LL API cross reference:**
- MDIER MCMP1IE LL_HRTIM_EnableIT_CMP1
 - TIMxDIER CMP1IE LL_HRTIM_EnableIT_CMP1

LL_HRTIM_DisableIT_CMP1

- Function name**
- ```
__STATIC_INLINE void LL_HRTIM_DisableIT_CMP1
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)
```
- Function description**
- Disable the compare 1 interrupt for a given timer.
- Parameters**
- **HRTIMx:** High Resolution Timer instance
  - **Timer:** This parameter can be one of the following values:
    - LL\_HRTIM\_TIMER\_MASTER
    - LL\_HRTIM\_TIMER\_A
    - LL\_HRTIM\_TIMER\_B
    - LL\_HRTIM\_TIMER\_C
    - LL\_HRTIM\_TIMER\_D
    - LL\_HRTIM\_TIMER\_E
- Return values**
- **None**
- Reference Manual to LL API cross reference:**
- MDIER MCMP1IE LL\_HRTIM\_DisableIT\_CMP1
  - TIMxDIER CMP1IE LL\_HRTIM\_DisableIT\_CMP1

### **LL\_HRTIM\_EnableIT\_CPT2**

- Function name      **`_STATIC_INLINE void LL_HRTIM_EnableIT_CPT2  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**
- Function description      Enable the capture 2 interrupt for a given timer.
- Parameters
  - **HRTIMx:** High Resolution Timer instance
  - **Timer:** This parameter can be one of the following values:
    - LL\_HRTIM\_TIMER\_A
    - LL\_HRTIM\_TIMER\_B
    - LL\_HRTIM\_TIMER\_C
    - LL\_HRTIM\_TIMER\_D
    - LL\_HRTIM\_TIMER\_E
- Return values
  - **None**
- Reference Manual to  
LL API cross

### **LL\_HRTIM\_DisableIT\_CPT2**

- Function name      **`_STATIC_INLINE void LL_HRTIM_DisableIT_CPT2  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**
- Function description      Enable the capture 2 interrupt for a given timer.
- Parameters
  - **HRTIMx:** High Resolution Timer instance
  - **Timer:** This parameter can be one of the following values:
    - LL\_HRTIM\_TIMER\_A
    - LL\_HRTIM\_TIMER\_B
    - LL\_HRTIM\_TIMER\_C
    - LL\_HRTIM\_TIMER\_D
    - LL\_HRTIM\_TIMER\_E
- Return values
  - **None**

### **LL\_HRTIM\_IsEnabledIT\_CPT2**

- Function name      **`_STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_CPT2  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**
- Function description      Indicate whether the capture 2 interrupt is enabled for a given timer.
- Parameters
  - **HRTIMx:** High Resolution Timer instance
  - **Timer:** This parameter can be one of the following values:
    - LL\_HRTIM\_TIMER\_A
    - LL\_HRTIM\_TIMER\_B

- LL\_HRTIM\_TIMER\_C
- LL\_HRTIM\_TIMER\_D
- LL\_HRTIM\_TIMER\_E

Return values

- **State:** of CPT2IE bit in HRTIM\_TIMxDIER register (1 or 0).

### **LL\_HRTIM\_EnableIT\_SET1**

Function name

```
__STATIC_INLINE void LL_HRTIM_EnableIT_SET1
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)
```

Function description

Enable the output 1 set interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **None**

### **LL\_HRTIM\_DisableIT\_SET1**

Function name

```
__STATIC_INLINE void LL_HRTIM_DisableIT_SET1
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)
```

Function description

Disable the output 1 set interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

### **LL\_HRTIM\_IsEnabledIT\_SET2**

Function name

**`__STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_SET2(  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Indicate whether the output 2 set interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **State:** of SET2xIE bit in HRTIM\_TIMxDIER register (1 or 0).

Reference Manual to  
LL API cross  
reference:

### **LL\_HRTIM\_DisableIT\_RST**

Function name

**`_STATIC_INLINE void LL_HRTIM_DisableIT_RST  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Disable the reset/roll-over interrupt for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **None**

### **LL\_HRTIM\_IsEnabledIT\_RST**

Function name

**`_STATIC_INLINE uint32_t LL_HRTIM_IsEnabledIT_RST  
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

Function description

Indicate whether the reset/roll-over interrupt is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **State:** of RSTIE bit in HRTIM\_TIMxDIER register (1 or 0).

**LL\_HRTIM\_DisableDMAReq\_UPDATE**

## Function name

**`_STATIC_INLINE void LL_HRTIM_DisableDMAReq_UPDATE (HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

## Function description

Disable the update DMA request for a given timer.

## Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

## Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- MDIER MUPDDE LL\_HRTIM\_DisableDMAReq\_UPDATE
- TIMxDIER UPDDE LL\_HRTIM\_DisableDMAReq\_UPDATE

**LL\_HRTIM\_IsEnabledDMAReq\_UPDATE**

## Function name

**`_STATIC_INLINE uint32_t LL_HRTIM_IsEnabledDMAReq_UPDATE (HRTIM_TypeDef * HRTIMx, uint32_t Timer)`**

## Function description

Indicate whether the update DMA request is enabled for a given timer.

## Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

## Return values

- **State:** of MUPDDE/UPDDE bit in HRTIM\_MDIER/HRTIM\_TIMxDIER register (1 or 0).

### **LL\_HRTIM\_IsEnabledDMAReq\_CMP2**

Function name

```
__STATIC_INLINE uint32_t
LL_HRTIM_IsEnabledDMAReq_CMP2 (HRTIM_TypeDef *
HRTIMx, uint32_t Timer)
```

Function description

Indicate whether the compare 2 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **State:** of MCMP2DE/CMP2DE bit in HRTIM\_MDIER/HRTIM\_TIMxDIER register (1 or 0).

### **LL\_HRTIM\_IsEnabledDMAReq\_CMP4**

Function name

**`_STATIC_INLINE uint32_t  
LL_HRTIM_IsEnabledDMAReq_CMP4 (HRTIM_TypeDef *  
HRTIMx, uint32_t Timer)`**

Function description

Indicate whether the compare 4 DMA request is enabled for a given timer.

Parameters

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_MASTER
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

Return values

- **State:** of MCMP4DE/CMP4DE bit in HRTIM\_MDIER/HRTIM\_TIMxDIER register (1 or 0).

| Function name        | <code>__STATIC_INLINE void LL_HRTIM_DisableDMAReq_SET2<br/>(HRTIM_TypeDef * HRTIMx, uint32_t Timer)</code>                                                                    |
| Function description | Disable the output 2 set DMA request for a given timer.                                                                                                                       |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>HRTIMx:</b> High Resolution Timer instance</li> <li>• <b>Timer:</b> This parameter can be one of the following values:</li> </ul> |

- LL\_HRTIM\_TIMER\_A
- LL\_HRTIM\_TIMER\_B
- LL\_HRTIM\_TIMER\_C
- LL\_HRTIM\_TIMER\_D
- LL\_HRTIM\_TIMER\_E

**Return values**

**Reference Manual to  
LL API cross  
reference:**

- **None**

- TIMxDIER SET2DE LL\_HRTIM\_DisableDMAReq\_SET2

### **LL\_HRTIM\_IsEnabledDMAReq\_SET2**

**Function name**

```
__STATIC_INLINE uint32_t
LL_HRTIM_IsEnabledDMAReq_SET2 (HRTIM_TypeDef *
HRTIMx, uint32_t Timer)
```

**Function description**

Indicate whether the output 2 set DMA request is enabled for a given timer.

**Parameters**

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

**Return values**

- **State:** of SET2xDE bit in HRTIM\_TIMxDIER register (1 or 0).

**Reference Manual to  
LL API cross  
reference:**

- TIMxDIER SET2DE LL\_HRTIM\_IsEnabledDMAReq\_SET2

### **LL\_HRTIM\_EnableDMAReq\_RST2**

**Function name**

```
__STATIC_INLINE void LL_HRTIM_EnableDMAReq_RST2
(HRTIM_TypeDef * HRTIMx, uint32_t Timer)
```

**Function description**

Enable the output 2 reset DMA request for a given timer.

**Parameters**

- **HRTIMx:** High Resolution Timer instance
- **Timer:** This parameter can be one of the following values:
  - LL\_HRTIM\_TIMER\_A
  - LL\_HRTIM\_TIMER\_B
  - LL\_HRTIM\_TIMER\_C
  - LL\_HRTIM\_TIMER\_D
  - LL\_HRTIM\_TIMER\_E

**Return values**

- **None**

**Reference Manual to  
LL API cross  
reference:**

- TIMxDIER RST2DE LL\_HRTIM\_EnableDMAReq\_RST2

Idle on external Event 9

`LL_HRTIM_DLYPRT_BALANCED_EEV9` Timers D, E: Balanced Idle on external Event 9

#### **DEADTIME FALLING SIGN**

`LL_HRTIM_DT_FALLING_POSITIVE` Positive deadtime on falling edge

`LL_HRTIM_DT_FALLING_NEGATIVE` Negative deadtime on falling edge

#### **DEADTIME PRESCALER**

`LL_HRTIM_DT_PRESCALER_MUL8`  $fDTG = fHRTIM * 8$

`LL_HRTIM_DT_PRESCALER_MUL4`  $fDTG = fHRTIM * 4$

`LL_HRTIM_DT_PRESCALER_MUL2`  $fDTG = fHRTIM * 2$

`LL_HRTIM_DT_PRESCALER_DIV1`  $fDTG = fHRTIM$

`LL_HRTIM_DT_PRESCALER_DIV2`  $fDTG = fHRTIM / 2$

`LL_HRTIM_DT_PRESCALER_DIV4`  $fDTG = fHRTIM / 4$

`LL_HRTIM_DT_PRESCALER_DIV8`  $fDTG = fHRTIM / 8$

`LL_HRTIM_DT_PRESCALER_DIV16`  $fDTG = fHRTIM / 16$

#### **DEADTIME RISING SIGN**

`LL_HRTIM_DT_RISING_POSITIVE` Positive deadtime on rising edge

`LL_HRTIM_DT_RISING_NEGATIVE` Negative deadtime on rising edge

#### **EXTERNAL EVENT FAST MODE**

`LL_HRTIM_EE_FASTMODE_DISABLE` External Event is re-synchronized by the HRTIM logic before acting on outputs

`LL_HRTIM_EE_FASTMODE_ENABLE` External Event is acting asynchronously on outputs (low latency mode)

#### **EXTERNAL EVENT DIGITAL FILTER**

`LL_HRTIM_EE_FILTER_NONE` Filter disabled

`LL_HRTIM_EE_FILTER_1`  $fSAMPLING = fHRTIM, N=2$

`LL_HRTIM_EE_FILTER_2`  $fSAMPLING = fHRTIM, N=4$

`LL_HRTIM_EE_FILTER_3`  $fSAMPLING = fHRTIM, N=8$

`LL_HRTIM_EE_FILTER_4`  $fSAMPLING = fEEVS/2, N=6$

`LL_HRTIM_EE_FILTER_5`  $fSAMPLING = fEEVS/2, N=8$

`LL_HRTIM_EE_FILTER_6`  $fSAMPLING = fEEVS/4, N=6$

`LL_HRTIM_EE_FILTER_7`  $fSAMPLING = fEEVS/4, N=8$

`LL_HRTIM_EE_FILTER_8`  $fSAMPLING = fEEVS/8, N=6$

`LL_HRTIM_EE_FILTER_9`  $fSAMPLING = fEEVS/8, N=8$

`LL_HRTIM_EE_FILTER_10`  $fSAMPLING = fEEVS/16, N=5$

`LL_HRTIM_EE_FILTER_11`  $fSAMPLING = fEEVS/16, N=6$

`LL_HRTIM_EE_FILTER_12`  $fSAMPLING = fEEVS/16, N=8$

|                       |                           |
|-----------------------|---------------------------|
| LL_HRTIM_EE_FILTER_13 | fSAMPLING = fEEVS/32, N=5 |
| LL_HRTIM_EE_FILTER_14 | fSAMPLING = fEEVS/32, N=6 |
| LL_HRTIM_EE_FILTER_15 | fSAMPLING = fEEVS/32, N=8 |

**EXTERNAL EVENT POLARITY**

|                           |                               |
|---------------------------|-------------------------------|
| LL_HRTIM_EE_POLARITY_HIGH | External event is active high |
| LL_HRTIM_EE_POLARITY_LOW  | External event is active low  |

**EXTERNAL EVENT PRESCALER**

|                            |                    |
|----------------------------|--------------------|

`LL_HRTIM_OUTPUT_TD2` Timer D - Output 2 identifier

`LL_HRTIM_OUTPUT_TE1` Timer E - Output 1 identifier

`LL_HRTIM_OUTPUT_TE2` Timer E - Output 2 identifier

#### **OUTPUT STATE**

`LL_HRTIM_OUTPUTSTATE_IDLE` Main operating mode, where the output can take the active or inactive level as programmed in the crossbar unit

`LL_HRTIM_OUTPUTSTATE_RUN` Default operating state (e.g. after an HRTIM reset, when the outputs are disabled by software or during a burst mode operation)

`LL_HRTIM_OUTPUTSTATE_FAULT` Safety state, entered in case of a shut-down request on FAULTx inputs

#### **OUTPUT BURST MODE ENTRY MODE**

`LL_HRTIM_OUT_BM_ENTRYMODE_REGULAR` The programmed Idle state is applied immediately to the Output

`LL_HRTIM_OUT_BM_ENTRYMODE_DELAYED` Deadtime is inserted on output before entering the idle mode

#### **OUTPUT CHOPPER MODE**

`LL_HRTIM_OUT_CHOPPERMODE_DISABLED` Output signal is not altered

`LL_HRTIM_OUT_CHOPPERMODE_ENABLED` Output signal is chopped by a carrier signal

#### **OUTPUT FAULT STATE**

`LL_HRTIM_OUT_FAULTSTATE_NO_ACTION` The output is not affected by the fault input

`LL_HRTIM_OUT_FAULTSTATE_ACTIVE` Output at active level when in FAULT state

`LL_HRTIM_OUT_FAULTSTATE_INACTIVE` Output at inactive level when in FAULT state

`LL_HRTIM_OUT_FAULTSTATE_HIGHZ` Output is tri-stated when in FAULT state

#### **OUTPUT IDLE LEVEL**

`LL_HRTIM_OUT_IDLELEVEL_INACTIVE` Output at inactive level when in IDLE state

`LL_HRTIM_OUT_IDLELEVEL_ACTIVE` Output at active level when in IDLE state

#### **OUTPUT IDLE MODE**

`LL_HRTIM_OUT_NO_IDLE` The output is not affected by the burst mode operation

`LL_HRTIM_OUT_IDLE_WHEN_BURST` The output is in idle state when requested by the burst mode controller

#### **OUTPUT LEVEL**

`LL_HRTIM_OUT_LEVEL_INACTIVE` Corresponds to a logic level 0 for a positive polarity (High) and to a logic level 1 for a negative polarity (Low)

|                                             |                                                                                                                    |
|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <code>LL_HRTIM_OUT_LEVEL_ACTIVE</code>      | Corresponds to a logic level 1 for a positive polarity (High) and to a logic level 0 for a negative polarity (Low) |
| <b><i>OUPUT POLARITY</i></b>                |                                                                                                                    |
| <code>LL_HRTIM_OUT_POSITIVE_POLARITY</code> | Output is active HIGH                                                                                              |
| <code>LL_HRTIM_OUT_NEGATIVE_POLARITY</code> | Output is active LOW                                                                                               |

| LL_HRTIM_RESETTRIG_OTHER2_CMP4 | The timer counter is reset upon other timer Compare 4 event  |
| LL_HRTIM_RESETTRIG_OTHER3_CMP1 | The timer counter is reset upon other timer Compare 1 event  |
| LL_HRTIM_RESETTRIG_OTHER3_CMP2 | The timer counter is reset upon other timer Compare 2 event  |
| LL_HRTIM_RESETTRIG_OTHER3_CMP4 | The timer counter is reset upon other timer Compare 4 event  |
| LL_HRTIM_RESETTRIG_OTHER4_CMP1 | The timer counter is reset upon other timer Compare 1 event  |

`LL_HRTIM_RESETTRIG_OTHER4_CMP2` The timer counter is reset upon other timer Compare 2 event

`LL_HRTIM_RESETTRIG_OTHER4_CMP4` The timer counter is reset upon other timer Compare 4 event

#### **SYNCHRONIZATION INPUT SOURCE**

`LL_HRTIM_SYNCIN_SRC_NONE` HRTIM is not synchronized and runs in standalone mode

`LL_HRTIM_SYNCIN_SRC_TIM_EVENT` The HRTIM is synchronized with the on-chip timer

`LL_HRTIM_SYNCIN_SRC_EXTERNAL_EVENT` A positive pulse on SYNCIN input triggers the HRTIM

#### **SYNCHRONIZATION OUTPUT POLARITY**

`LL_HRTIM_SYNCOUT_DISABLED` Synchronization output event is disabled

`LL_HRTIM_SYNCOUT_POSITIVE_PULSE` SCOUT pin has a low idle level and issues a positive pulse of 16 fHRTIM clock cycles length for the synchronization

`LL_HRTIM_SYNCOUT_NEGATIVE_PULSE` SCOUT pin has a high idle level and issues a negative pulse of 16 fHRTIM clock cycles length for the synchronization

#### **SYNCHRONIZATION OUTPUT SOURCE**

`LL_HRTIM_SYNCOUT_SRC_MASTER_START` A pulse is sent on the SYNCOUT output upon master timer start event

`LL_HRTIM_SYNCOUT_SRC_MASTER_CMP1` A pulse is sent on the SYNCOUT output upon master timer compare 1 event

`LL_HRTIM_SYNCOUT_SRC_TIMA_START` A pulse is sent on the SYNCOUT output upon timer A start or reset events

`LL_HRTIM_SYNCOUT_SRC_TIMA_CMP1` A pulse is sent on the SYNCOUT output upon timer A compare 1 event

#### **TIMER ID**

`LL_HRTIM_TIMER_MASTER` Master timer identifier

`LL_HRTIM_TIMER_A` Timer A identifier

`LL_HRTIM_TIMER_B` Timer B identifier

`LL_HRTIM_TIMER_C` Timer C identifier

`LL_HRTIM_TIMER_D` Timer D identifier

`LL_HRTIM_TIMER_E` Timer E identifier

#### **TIMER EXTERNAL EVENT FILTER**

`LL_HRTIM_EEFLTR_NONE`

`LL_HRTIM_EEFLTR_BLANKINGCMP1` Blanking from counter reset/roll-over to Compare 1

`LL_HRTIM_EEFLTR_BLANKINGCMP2` Blanking from counter reset/roll-over to Compare 2

|                                            |                                                     |
|--------------------------------------------|-----------------------------------------------------|
| <code>LL_HRTIM_EEFLTR_BLANKINGCMP3</code>  | Blanking from counter reset/roll-over to Compare 3  |
| <code>LL_HRTIM_EEFLTR_BLANKINGCMP4</code>  | Blanking from counter reset/roll-over to Compare 4  |
| <code>LL_HRTIM_EEFLTR_BLANKINGFLTR1</code> | Blanking from another timing unit: TIMFLTR1 source  |
| <code>LL_HRTIM_EEFLTR_BLANKINGFLTR2</code> | Blanking from another timing unit: TIMFLTR2 source  |
| <code>LL_HRTIM_EEFLTR_BLANKINGFLTR3</code> | Blanking from another timing unit: TIMFLTR3 source  |
| <code>LL_HRTIM_EEFLTR_BLANKINGFLTR4</code> | Blanking from another timing unit: TIMFLTR4 source  |
| <code>LL_HRTIM_EEFLTR_BLANKINGFLTR5</code> | Blanking from another timing unit: TIMFLTR5 source  |
| <code>LL_HRTIM_EEFLTR_BLANKINGFLTR6</code> | Blanking from another timing unit: TIMFLTR6 source  |

- LL\_HRTIM\_OUTPUTSTATE\_IDLE
- LL\_HRTIM\_OUTPUTSTATE\_RUN
- LL\_HRTIM\_OUTPUTSTATE\_FAULT

**Common Write and read registers Macros****LL\_HRTIM\_WriteReg      Description:**

- Write a value in HRTIM register.

**Parameters:**

- \_\_INSTANCE\_\_: HRTIM Instance
- \_\_REG\_\_: Register to be written
- \_\_VALUE\_\_: Value to be written in the register

**Return value:**

- None

**LL\_HRTIM\_ReadReg****Description:**

- Read a value in HRTIM register.

**Parameters:**

- \_\_INSTANCE\_\_: HRTIM Instance
- \_\_REG\_\_: Register to be read

**Return value:**

- Register: value

## 69 LL I2C Generic Driver

### 69.1 I2C Firmware driver registers structures

#### 69.1.1 LL\_I2C\_InitTypeDef

##### Data Fields

- *uint32\_t PeripheralMode*
- *uint32\_t Timing*
- *uint32\_t AnalogFilter*
- *uint32\_t DigitalFilter*
- *uint32\_t OwnAddress1*
- *uint32\_t TypeAcknowledge*
- *uint32\_t OwnAddrSize*

##### Field Documentation

- ***uint32\_t LL\_I2C\_InitTypeDef::PeripheralMode***  
Specifies the peripheral mode. This parameter can be a value of **I2C\_LL\_EC\_PERIPHERAL\_MODE**This feature can be modified afterwards using unitary function **LL\_I2C\_SetMode()**.
- ***uint32\_t LL\_I2C\_InitTypeDef::Timing***  
Specifies the SDA setup, hold time and the SCL high, low period values. This parameter must be set by referring to the STM32CubeMX Tool and the helper macro **\_LL\_I2C\_CONVERT\_TIMINGS()**This feature can be modified afterwards using unitary function **LL\_I2C\_SetTiming()**.
- ***uint32\_t LL\_I2C\_InitTypeDef::AnalogFilter***  
Enables or disables analog noise filter. This parameter can be a value of **I2C\_LL\_EC\_ANALOGFILTER\_SELECTION**This feature can be modified afterwards using unitary functions **LL\_I2C\_EnableAnalogFilter()** or **LL\_I2C\_DisableAnalogFilter()**.
- ***uint32\_t LL\_I2C\_InitTypeDef::DigitalFilter***  
Configures the digital noise filter. This parameter can be a number between Min\_Data = 0x00 and Max\_Data = 0x0FThis feature can be modified afterwards using unitary function **LL\_I2C\_SetDigitalFilter()**.
- ***uint32\_t LL\_I2C\_InitTypeDef::OwnAddress1***  
Specifies the device own address 1. This parameter must be a value between Min\_Data = 0x00 and Max\_Data = 0x3FFThis feature can be modified afterwards using unitary function **LL\_I2C\_SetOwnAddress1()**.
- ***uint32\_t LL\_I2C\_InitTypeDef::TypeAcknowledge***  
Specifies the ACKnowledge or Non ACKnowledge condition after the address receive match code or next received byte. This parameter can be a value of **I2C\_LL\_EC\_I2C\_ACKNOWLEDGE**This feature can be modified afterwards using unitary function **LL\_I2C\_AcknowledgeNextData()**.
- ***uint32\_t LL\_I2C\_InitTypeDef::OwnAddrSize***  
Specifies the device own address 1 size (7-bit or 10-bit). This parameter can be a value of **I2C\_LL\_EC\_OWNADDRESS1**This feature can be modified afterwards using unitary function **LL\_I2C\_SetOwnAddress1()**.

## 69.2 I2C Firmware driver API description

### 69.2.1 Detailed description of functions

#### LL\_I2C\_Enable

### LL\_I2C\_DisableDMAReq\_TX

Function name `__STATIC_INLINE void LL_I2C_DisableDMAReq_TX(I2C_TypeDef * I2Cx)`

Function description Disable DMA transmission requests.

- Parameters
- **I2Cx:** I2C Instance.

- Return values
- **None**

- Reference Manual to  
LL API cross  
reference:
- CR1 TXDMAEN LL\_I2C\_DisableDMAReq\_TX

### LL\_I2C\_IsEnabledDMAReq\_TX

Function name `__STATIC_INLINE uint32_t LL_I2C_IsEnabledDMAReq_TX(I2C_TypeDef * I2Cx)`

Function description Check if DMA transmission requests are enabled or disabled.

- Parameters
- **I2Cx:** I2C Instance.

- Return values
- **State:** of bit (1 or 0).

- Reference Manual to  
LL API cross  
reference:

|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <code>__STATIC_INLINE void LL_I2C_SetOwnAddress2<br/>(I2C_TypeDef * I2Cx, uint32_t OwnAddress2, uint32_t<br/>OwnAddrMask)</code>                          |
| Function description | Set the 7bits Own Address2.                                                                                                                               |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>I2Cx:</b> I2C Instance.</li> <li>• <b>OwnAddress2:</b> Value between Min_Data=0 and Max_Data=0x7F.</li> </ul> |

- **OwnAddrMask:** This parameter can be one of the following values:
  - LL\_I2C\_OWNADDRESS2\_NOMASK
  - LL\_I2C\_OWNADDRESS2\_MASK01
  - LL\_I2C\_OWNADDRESS2\_MASK02
  - LL\_I2C\_OWNADDRESS2\_MASK03
  - LL\_I2C\_OWNADDRESS2\_MASK04
  - LL\_I2C\_OWNADDRESS2\_MASK05
  - LL\_I2C\_OWNADDRESS2\_MASK06
  - LL\_I2C\_OWNADDRESS2\_MASK07

Return values

- **None**

Notes

- This action has no effect if own address2 is enabled.

- OAR2 OA2MSK LL\_I2C\_SetOwnAddress2

### **LL\_I2C\_EnableOwnAddress2**

Function name      **STATIC\_INLINE void LL\_I2C\_EnableOwnAddress2(I2C\_TypeDef \* I2Cx)**

Function description      Enable acknowledge on Own Address2 match address.

Parameters      • **I2Cx:** I2C Instance.

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- OAR2 OA2EN LL\_I2C\_EnableOwnAddress2

### **LL\_I2C\_DisableOwnAddress2**

Function name      **STATIC\_INLINE void LL\_I2C\_DisableOwnAddress2(I2C\_TypeDef \* I2Cx)**

Function description      Disable acknowledge on Own Address2 match address.

Parameters      • **I2Cx:** I2C Instance.

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- OAR2 OA2EN LL\_I2C\_DisableOwnAddress2

### **LL\_I2C\_IsEnabledOwnAddress2**

Function name      **STATIC\_INLINE uint32\_t LL\_I2C\_IsEnabledOwnAddress2(I2C\_TypeDef \* I2Cx)**

Function description      Check if Own Address1 acknowledge is enabled or disabled.

Parameters      • **I2Cx:** I2C Instance.

Return values

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

- OAR2 OA2EN LL\_I2C\_IsEnabledOwnAddress2

### LL\_I2C\_SetTiming

Function name

**\_STATIC\_INLINE void LL\_I2C\_SetTiming (I2C\_TypeDef \*  
I2Cx, uint32\_t Timing)**

Function description

Configure the SDA setup, hold time and the SCL high, low period.

Parameters

- **I2Cx:** I2C Instance.
- **Timing:** This parameter must be a value between Min\_Data=0 and Max\_Data=0xFFFFFFFF.

Return values

- **None**

Notes

- This bit can only be programmed when the I2C is disabled (PE = 0).
- This parameter is computed with the STM32CubeMX Tool.

Reference Manual to  
LL API cross  
reference:

- TIMINGR TIMINGR LL\_I2C\_SetTiming

### LL\_I2C\_GetTimingPrescaler

Function name

**\_STATIC\_INLINE uint32\_t LL\_I2C\_GetTimingPrescaler  
(I2C\_TypeDef \* I2Cx)**

Function description

Get the Timing Prescaler setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min\_Data=0x0 and Max\_Data=0xF

Reference Manual to  
LL API cross  
reference:

- TIMINGR PRESC LL\_I2C\_GetTimingPrescaler

### LL\_I2C\_GetClockLowPeriod

Function name

**\_STATIC\_INLINE uint32\_t LL\_I2C\_GetClockLowPeriod  
(I2C\_TypeDef \* I2Cx)**

Function description

Get the SCL low period setting.

Parameters

- **I2Cx:** I2C Instance.

Return values

- **Value:** between Min\_Data=0x00 and Max\_Data=0xFF

Reference Manual to  
LL API cross  
reference:

- TIMINGR SCLL LL\_I2C\_GetClockLowPeriod

### LL\_I2C\_GetTransferDirection

Function name      **`__STATIC_INLINE uint32_t LL_I2C_GetTransferDirection(I2C_TypeDef * I2Cx)`**

Function description      Indicate the value of transfer direction (slave mode).

Parameters     

- **I2Cx:** I2C Instance.

Return values     

- **Returned:** value can be one of the following values:
  - LL\_I2C\_DIRECTION\_WRITE
  - LL\_I2C\_DIRECTION\_READ

Notes     

- RESET: Write transfer, Slave enters in receiver mode. SET: Read transfer, Slave enters in transmitter mode.

### LL\_I2C\_GetAddressMatchCode

Function name      **`__STATIC_INLINE uint32_t LL_I2C_GetAddressMatchCode(I2C_TypeDef * I2Cx)`**

Function description      Return the slave matched address.

Parameters     

- **I2Cx:** I2C Instance.

Return values     

- **Value:** between Min\_Data=0x00 and Max\_Data=0x3F

Reference Manual to  
LL API cross  
reference:

- TXDR TXDATA LL\_I2C\_TransmitData8

### **LL\_I2C\_Init**

|                      |                                                                                                                                                                                                                            |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <code>uint32_t LL_I2C_Init (I2C_TypeDef * I2Cx, LL_I2C_InitTypeDef * I2C_InitStruct)</code>                                                                                                                                |
| Function description | Initialize the I2C registers according to the specified parameters in I2C_InitStruct.                                                                                                                                      |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>I2Cx:</b> I2C Instance.</li> <li>• <b>I2C_InitStruct:</b> pointer to a LL_I2C_InitTypeDef structure.</li> </ul>                                                                |
| Return values        | <ul style="list-style-type: none"> <li>• <b>An:</b> ErrorStatus enumeration value: <ul style="list-style-type: none"> <li>– SUCCESS: I2C registers are initialized</li> <li>– ERROR: Not applicable</li> </ul> </li> </ul> |

### **LL\_I2C\_DeInit**

|                      |                                                                                                                                                                                              |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Function name        | <code>uint32_t LL_I2C_DeInit (I2C_TypeDef * I2Cx)</code>                                                                                                                                     |
| Function description | De-initialize the I2C registers to their default reset values.                                                                                                                               |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>I2Cx:</b> I2C Instance.</li> </ul>                                                                                                               |
| Return values        | <ul style="list-style-type: none"> <li>• <b>An:</b> ErrorStatus enumeration value: <ul style="list-style-type: none"> <li>– SUCCESS: I2C registers are de-initialized</li> </ul> </li> </ul> |

- ERROR: I2C registers are not de-initialized

### **LL\_I2C\_StructInit**

|                      |                                                                                                                       |
|----------------------|-----------------------------------------------------------------------------------------------------------------------|
| Function name        | <b>void LL_I2C_StructInit (LL_I2C_InitTypeDef * I2C_InitStruct)</b>                                                   |
| Function description | Set each LL_I2C_InitTypeDef field to default value.                                                                   |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>I2C_InitStruct:</b> Pointer to a LL_I2C_InitTypeDef structure.</li> </ul> |
| Return values        | <ul style="list-style-type: none"> <li>• <b>None</b></li> </ul>                                                       |

## **69.3 I2C Firmware driver defines**

### **69.3.1 I2C**

#### ***Master Addressing Mode***

**LL\_I2C\_ADDRESSING\_MODE\_7BIT** Master operates in 7-bit addressing mode.

**LL\_I2C\_ADDRESSING\_MODE\_10BIT** Master operates in 10-bit addressing mode.

#### ***Slave Address Length***

**LL\_I2C\_ADDRSOLVE\_7BIT** Slave Address in 7-bit.

**LL\_I2C\_ADDRSOLVE\_10BIT** Slave Address in 10-bit.

#### ***Analog Filter Selection***

**LL\_I2C\_ANALOGFILTER\_ENABLE** Analog filter is enabled.

**LL\_I2C\_ANALOGFILTER\_DISABLE** Analog filter is disabled.

#### ***Clear Flags Defines***

**LL\_I2C\_ICR\_ADDRCF** Address Matched flag

**LL\_I2C\_ICR\_NACKCF** Not Acknowledge flag

**LL\_I2C\_ICR\_STOPCF** Stop detection flag

**LL\_I2C\_ICR\_BERRCF** Bus error flag

**LL\_I2C\_ICR\_ARLOCF** Arbitration Lost flag

**LL\_I2C\_ICR\_OVRCF** Overrun/Underrun flag

**LL\_I2C\_ICR\_PECCF** PEC error flag

**LL\_I2C\_ICR\_TIMOUTCF** Timeout detection flag

**LL\_I2C\_ICR\_ALERTCF** Alert flag

#### ***Read Write Direction***

**LL\_I2C\_DIRECTION\_WRITE** Write transfer request by master, slave enters receiver mode.

**LL\_I2C\_DIRECTION\_READ** Read transfer request by master, slave enters transmitter mode.

#### ***DMA Register Data***

**LL\_I2C\_DMA\_REG\_DATA\_TRANSMIT** Get address of data register used for transmission

|                             |                                                 |
|-----------------------------|-------------------------------------------------|
| LL_I2C_DMA_REG_DATA_RECEIVE | Get address of data register used for reception |
|-----------------------------|-------------------------------------------------|

#### **Start And Stop Generation**

|                                     |                                                          |
|-------------------------------------|----------------------------------------------------------|
| LL_I2C_GENERATE_NOSTARTSTOP         | Don't Generate Stop and Start condition.                 |
| LL_I2C_GENERATE_STOP                | Generate Stop condition (Size should be set to 0).       |
| LL_I2C_GENERATE_START_READ          | Generate Start for read request.                         |
| LL_I2C_GENERATE_START_WRITE         | Generate Start for write request.                        |
| LL_I2C_GENERATE_RESTART_7BIT_READ   | Generate Restart for read request, slave 7Bit address.   |
| LL_I2C_GENERATE_RESTART_7BIT_WRITE  | Generate Restart for write request, slave 7Bit address.  |
| LL_I2C_GENERATE_RESTART_10BIT_READ  | Generate Restart for read request, slave 10Bit address.  |
| LL_I2C_GENERATE_RESTART_10BIT_WRITE | Generate Restart for write request, slave 10Bit address. |

#### **Get Flags Defines**

|                    |                                     |
|--------------------|-------------------------------------|
| LL_I2C_ISR_TXE     | Transmit data register empty        |
| LL_I2C_ISR_RXIS    | Transmit interrupt status           |
| LL_I2C_ISR_RXNE    | Receive data register not empty     |
| LL_I2C_ISR_ADDR    | Address matched (slave mode)        |
| LL_I2C_ISR_NACKF   | Not Acknowledge received flag       |
| LL_I2C_ISR_STOPF   | Stop detection flag                 |
| LL_I2C_ISR_TC      | Transfer Complete (master mode)     |
| LL_I2C_ISR_TCR     | Transfer Complete Reload            |
| LL_I2C_ISR_BERR    | Bus error                           |
| LL_I2C_ISR_ARLO    | Arbitration lost                    |
| LL_I2C_ISR_OVR     | Overrun/Underrun (slave mode)       |
| LL_I2C_ISR_PECERR  | PEC Error in reception (SMBus mode) |
| LL_I2C_ISR_TIMEOUT | Timeout detection flag (SMBus mode) |
| LL_I2C_ISR_ALERT   | SMBus alert (SMBus mode)            |
| LL_I2C_ISR_BUSY    | Bus busy                            |

#### **Acknowledge Generation**

|             |                                           |
|-------------|-------------------------------------------|
| LL_I2C_ACK  | ACK is sent after current received byte.  |
| LL_I2C_NACK | NACK is sent after current received byte. |

#### **IT Defines**

|                 |                     |
|-----------------|---------------------|
| LL_I2C_CR1_TXIE | TX Interrupt enable |
| LL_I2C_CR1_RXIE | RX Interrupt enable |

|                   |                                             |
|-------------------|---------------------------------------------|
| LL_I2C_CR1_ADDRIE | Address match Interrupt enable (slave only) |
| LL_I2C_CR1_NACKIE | Not acknowledge received Interrupt enable   |
| LL_I2C_CR1_STOPIE | STOP detection Interrupt enable             |
| LL_I2C_CR1_TCIE   | Transfer Complete interrupt enable          |
| LL_I2C_CR1_ERRIE  | Error interrupts enable                     |

#### **Transfer End Mode**

|                                    |                                                          |
|------------------------------------|----------------------------------------------------------|
| LL_I2C_MODE_RELOAD                 | Enable I2C Reload mode.                                  |
| LL_I2C_MODE_AUTOEND                | Enable I2C Automatic end mode with no HW PEC comparison. |
| LL_I2C_MODE_SOFTEND                | Enable I2C Software end mode with no HW PEC comparison.  |
| LL_I2C_MODE_SMBUS_RELOAD           | Enable SMBUS Automatic end mode with HW PEC comparison.  |
| LL_I2C_MODE_SMBUS_AUTOEND_NO_PEC   | Enable SMBUS Automatic end mode with HW PEC comparison.  |
| LL_I2C_MODE_SMBUS_SOFTEND_NO_PEC   | Enable SMBUS Software end mode with HW PEC comparison.   |
| LL_I2C_MODE_SMBUS_AUTOEND_WITH_PEC | Enable SMBUS Automatic end mode with HW PEC comparison.  |
| LL_I2C_MODE_SMBUS_SOFTEND_WITH_PEC | Enable SMBUS Software end mode with HW PEC comparison.   |

#### **Own Address 1 Length**

|                          |                                    |
|--------------------------|------------------------------------|
| LL_I2C_OWNADDRESS1_7BIT  | Own address 1 is a 7-bit address.  |
| LL_I2C_OWNADDRESS1_10BIT | Own address 1 is a 10-bit address. |

#### **Own Address 2 Masks**

|                           |                                                       |
|---------------------------|-------------------------------------------------------|
| LL_I2C_OWNADDRESS2_NOMASK | Own Address2 No mask.                                 |
| LL_I2C_OWNADDRESS2_MASK01 | Only Address2 bits[7:2] are compared.                 |
| LL_I2C_OWNADDRESS2_MASK02 | Only Address2 bits[7:3] are compared.                 |
| LL_I2C_OWNADDRESS2_MASK03 | Only Address2 bits[7:4] are compared.                 |
| LL_I2C_OWNADDRESS2_MASK04 | Only Address2 bits[7:5] are compared.                 |
| LL_I2C_OWNADDRESS2_MASK05 | Only Address2 bits[7:6] are compared.                 |
| LL_I2C_OWNADDRESS2_MASK06 | Only Address2 bits[7] are compared.                   |
| LL_I2C_OWNADDRESS2_MASK07 | No comparison is done. All Address2 are acknowledged. |

#### **Peripheral Mode**

|                          |                                                             |
|--------------------------|-------------------------------------------------------------|
| LL_I2C_MODE_I2C          | I2C Master or Slave mode                                    |
| LL_I2C_MODE_SMBUS_HOST   | SMBus Host address acknowledge                              |
| LL_I2C_MODE_SMBUS_DEVICE | SMBus Device default mode (Default address not acknowledge) |

**LL\_I2C\_MODE\_SMBUS\_DEVICE\_ARP** SMBus Device Default address acknowledge

#### **Transfer Request Direction**

**LL\_I2C\_REQUEST\_WRITE** Master request a write transfer.

**LL\_I2C\_REQUEST\_READ** Master request a read transfer.

#### **SMBus TimeoutA Mode SCL SDA Timeout**

**LL\_I2C\_SMBUS\_TIMEOUTA\_MODE\_SCL\_LOW** TimeoutA is used to detect SCL low level timeout.

**LL\_I2C\_SMBUS\_TIMEOUTA\_MODE\_SDA\_SCL\_HIGH** TimeoutA is used to detect both SCL and SDA high level timeout.

#### **SMBus Timeout Selection**

**LL\_I2C\_SMBUS\_TIMEOUTA** TimeoutA enable bit

**LL\_I2C\_SMBUS\_TIMEOUTB** TimeoutB (extended clock) enable bit

**LL\_I2C\_SMBUS\_ALL\_TIMEOUT** TimeoutA and TimeoutB (extended clock) enable bits

#### **Convert SDA SCL timings**

**\_LL\_I2C\_CONVERT\_TIMINGS** **Description:**

- Configure the SDA setup, hold time and the SCL high, low period.

#### **Parameters:**

- \_PRESCALER\_**: This parameter must be a value between Min\_Data=0 and Max\_Data=0xF.
- \_DATA\_SETUP\_TIME\_**: This parameter must be a value between Min\_Data=0 and Max\_Data=0xF. ( $tscldel = (SCLDEL+1)xtpresc$ )
- \_DATA\_HOLD\_TIME\_**: This parameter must be a value between Min\_Data=0 and Max\_Data=0xF. ( $tsdadel = SDADELxtpresc$ )
- \_CLOCK\_HIGH\_PERIOD\_**: This parameter must be a value between Min\_Data=0 and Max\_Data=0xFF. ( $tsclh = (SCLH+1)xtpresc$ )
- \_CLOCK\_LOW\_PERIOD\_**: This parameter must be a value between Min\_Data=0 and Max\_Data=0xFF. ( $tscll = (SCLL+1)xtpresc$ )

#### **Return value:**

- Value: between Min\_Data=0 and Max\_Data=0xFFFFFFFF

#### **Common Write and read registers Macros**

**LL\_I2C\_WriteReg** **Description:**

- Write a value in I2C register.

#### **Parameters:**

- \_INSTANCE\_**: I2C Instance
- \_REG\_**: Register to be written
- \_VALUE\_**: Value to be written in the register

**Return value:**

- None

LL\_I2C\_ReadReg

**Description:**

- Read a value in I2C register.

**Parameters:**

- \_\_INSTANCE\_\_: I2C Instance
- \_\_REG\_\_: Register to be read

**Return value:**

- Register: value

## 70 LL I2S Generic Driver

### 70.1 I2S Firmware driver registers structures

#### 70.1.1 LL\_I2S\_InitTypeDef

##### Data Fields

- *uint32\_t Mode*
- *uint32\_t Standard*
- *uint32\_t DataFormat*
- *uint32\_t MCLKOutput*
- *uint32\_t AudioFreq*
- *uint32\_t ClockPolarity*

##### Field Documentation

- ***uint32\_t LL\_I2S\_InitTypeDef::Mode***  
Specifies the I2S operating mode. This parameter can be a value of **I2S\_LL\_EC\_MODE**This feature can be modified afterwards using unitary function **LL\_I2S\_SetTransferMode()**.
- ***uint32\_t LL\_I2S\_InitTypeDef::Standard***  
Specifies the standard used for the I2S communication. This parameter can be a value of **I2S\_LL\_EC\_STANDARD**This feature can be modified afterwards using unitary function **LL\_I2S\_SetStandard()**.
- ***uint32\_t LL\_I2S\_InitTypeDef::DataFormat***  
Specifies the data format for the I2S communication. This parameter can be a value of **I2S\_LL\_EC\_DATA\_FORMAT**This feature can be modified afterwards using unitary function **LL\_I2S\_SetDataFormat()**.
- ***uint32\_t LL\_I2S\_InitTypeDef::MCLKOutput***  
Specifies whether the I2S MCLK output is enabled or not. This parameter can be a value of **I2S\_LL\_EC\_MCLK\_OUTPUT**This feature can be modified afterwards using unitary functions **LL\_I2S\_EnableMasterClock()** or **LL\_I2S\_DisableMasterClock**.
- ***uint32\_t LL\_I2S\_InitTypeDef::AudioFreq***  
Specifies the frequency selected for the I2S communication. This parameter can be a value of **I2S\_LL\_EC\_AUDIO\_FREQ**Audio Frequency can be modified afterwards using Reference manual formulas to calculate Prescaler Linear, Parity and unitary functions **LL\_I2S\_SetPrescalerLinear()** and **LL\_I2S\_SetPrescalerParity()** to set it.
- ***uint32\_t LL\_I2S\_InitTypeDef::ClockPolarity***  
Specifies the idle state of the I2S clock. This parameter can be a value of **I2S\_LL\_EC\_POLARITY**This feature can be modified afterwards using unitary function **LL\_I2S\_SetClockPolarity()**.

### 70.2 I2S Firmware driver API description

#### 70.2.1 Detailed description of functions

##### LL\_I2S\_Enable

|                      |                                                                               |
|----------------------|-------------------------------------------------------------------------------|
| Function name        | <b>__STATIC_INLINE void LL_I2S_Enable (SPI_TypeDef * SPIx)</b>                |
| Function description | Select I2S mode and Enable I2S peripheral.                                    |
| Parameters           | <ul style="list-style-type: none"> <li>• <b>SPIx:</b> SPI Instance</li> </ul> |

|                                             |                                                                                                                    |

### **LL\_I2S\_GetTransferMode**

Function name      **`_STATIC_INLINE uint32_t LL_I2S_GetTransferMode(SPI_TypeDef * SPIx)`**

Function description      Get I2S transfer mode.

Parameters      • **SPIx:** SPI Instance

Return values      • **Returned:** value can be one of the following values:

- LL\_I2S\_MODE\_SLAVE\_TX
- LL\_I2S\_MODE\_SLAVE\_RX
- LL\_I2S\_MODE\_MASTER\_TX
- LL\_I2S\_MODE\_MASTER\_RX

- Reference Manual to  
LL API cross  
reference:

### **LL\_I2S\_SetPrescalerLinear**

Function name      **`_STATIC_INLINE void LL_I2S_SetPrescalerLinear(SPI_TypeDef * SPIx, uint8_t PrescalerLinear)`**

Function description      Set I2S linear prescaler.

Parameters      • **SPIx:** SPI Instance

• **PrescalerLinear:** Value between Min\_Data=0x02 and Max\_Data=0xFF

Return values      • **None**

- Reference Manual to  
LL API cross  
reference:
- I2SPR I2SDIV LL\_I2S\_SetPrescalerLinear

### **LL\_I2S\_GetPrescalerLinear**

Function name      **`_STATIC_INLINE uint32_t LL_I2S_GetPrescalerLinear(SPI_TypeDef * SPIx)`**

Function description      Get I2S linear prescaler.

Parameters      • **SPIx:** SPI Instance

Return values      • **PrescalerLinear:** Value between Min\_Data=0x02 and Max\_Data=0xFF

- Reference Manual to  
LL API cross  
reference:

***Common Write and read registers Macros*****LL\_I2S\_WriteReg****Description:**

- Write a value in I2S register.

**Parameters:**

- \_\_INSTANCE\_\_: I2S Instance
- \_\_REG\_\_: Register to be written
- \_\_VALUE\_\_: Value to be written in the register

**Return value:**

- None

**LL\_I2S\_ReadReg****Description:**

- Read a value in I2S register.

**Parameters:**

- \_\_INSTANCE\_\_: I2S Instance
- \_\_REG\_\_: Register to be read

**Return value:**

- Register: value

## 71 LL IWDG Generic Driver

### 71.1 IWDG Firmware driver API description

#### 71.1.1 Detailed description of functions

##### LL\_IWDG\_Enable

Function name **`__STATIC_INLINE void LL_IWDG_Enable (IWDG_TypeDef * IWDGx)`**

Function description Start the Independent Watchdog.

Parameters • **IWDGx:** IWDG Instance

Return values • **None**

Notes • Except if the hardware watchdog option is selected

Reference Manual to

LL API cross

reference:

**`__STATIC_INLINE void LL_IWDG_ReloadCounter (IWDG_TypeDef * IWDGx)`**

Function description Reloads IWDG counter with value defined in the reload register.

Parameters • **IWDGx:** IWDG Instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:

##### LL\_IWDG\_EnableWriteAccess

Function name **`__STATIC_INLINE void LL_IWDG_EnableWriteAccess (IWDG_TypeDef * IWDGx)`**

Function description Enable write access to IWDG\_PR, IWDG\_RLR and IWDG\_WINR registers.

Parameters • **IWDGx:** IWDG Instance

Return values • **None**

Reference Manual to  
LL API cross  
reference:

**LL\_IWDG\_DisableWriteAccess**

|                                                   |                                                                                         |
|---------------------------------------------------|-----------------------------------------------------------------------------------------|
| Function name                                     | <code>__STATIC_INLINE void LL_IWDG_DisableWriteAccess<br/>(IWDG_TypeDef * IWDGx)</code> |
| Function description                              | Disable write access to IWDG_PR, IWDG_RLR and IWDG_WINR registers.                      |
| Parameters                                        | <ul style="list-style-type: none"> <li>• <b>IWDGx:</b> IWDG Instance</li> </ul>         |

## 71.2 IWDG Firmware driver defines

### 71.2.1 IWDG

#### *Get Flags Defines*

|                |                                      |
|----------------|--------------------------------------|
| LL_IWDG_SR_PVU | Watchdog prescaler value update      |
| LL_IWDG_SR_RVU | Watchdog counter reload value update |
| LL_IWDG_SR_WVU | Watchdog counter window value update |

#### *Prescaler Divider*

|                       |                |
|-----------------------|----------------|
| LL_IWDG_PRESCALER_4   | Divider by 4   |
| LL_IWDG_PRESCALER_8   | Divider by 8   |
| LL_IWDG_PRESCALER_16  | Divider by 16  |
| LL_IWDG_PRESCALER_32  | Divider by 32  |
| LL_IWDG_PRESCALER_64  | Divider by 64  |
| LL_IWDG_PRESCALER_128 | Divider by 128 |
| LL_IWDG_PRESCALER_256 | Divider by 256 |

#### *Common Write and read registers Macros*

##### `LL_IWDG_WriteReg`    **Description:**

- Write a value in IWDG register.

##### **Parameters:**

- `__INSTANCE__`: IWDG Instance
- `__REG__`: Register to be written
- `__VALUE__`: Value to be written in the register

##### **Return value:**

- None

##### `LL_IWDG_ReadReg`    **Description:**

- Read a value in IWDG register.

##### **Parameters:**

- `__INSTANCE__`: IWDG Instance
- `__REG__`: Register to be read

##### **Return value:**

- Register: value

## 72 LL OPAMP Generic Driver

### 72.1 OPAMP Firmware driver registers structures

#### 72.1.1 LL\_OPAMP\_InitTypeDef

##### Data Fields

- *uint32\_t FunctionalMode*
- *uint32\_t InputNonInverting*
- *uint32\_t InputInverting*

##### Field Documentation

- ***uint32\_t LL\_OPAMP\_InitTypeDef::FunctionalMode***

Set OPAMP functional mode by setting internal connections: OPAMP operation in standalone, follower, ... This parameter can be a value of

***OPAMP\_LL\_EC\_FUNCTIONAL\_MODE***

**Note:**If OPAMP is configured in mode PGA, the gain can be configured using function **LL\_OPAMP\_SetPGAGain()**. This feature can be modified afterwards using unitary function **LL\_OPAMP\_SetFunctionalMode()**.

- ***uint32\_t LL\_OPAMP\_InitTypeDef::InputNonInverting***

Set OPAMP input non-inverting connection. This parameter can be a value of ***OPAMP\_LL\_EC\_INPUT\_NONINVERTING***This feature can be modified afterwards using unitary function **LL\_OPAMP\_SetInputNonInverting()**.

- ***uint32\_t LL\_OPAMP\_InitTypeDef::InputInverting***

Set OPAMP inverting input connection. This parameter can be a value of ***OPAMP\_LL\_EC\_INPUT\_INVERTING***

**Note:**OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin), this parameter is discarded. This feature can be modified afterwards using unitary function **LL\_OPAMP\_SetInputInverting()**.

### 72.2 OPAMP Firmware driver API description

#### 72.2.1 Detailed description of functions

##### LL\_OPAMP\_SetMode

Function name      ***\_STATIC\_INLINE void LL\_OPAMP\_SetMode  
(OPAMP\_TypeDef \* OPAMPx, uint32\_t Mode)***

Function description      Set OPAMP mode calibration or functional.

Parameters     
 

- **OPAMPx:** OPAMP instance
- **Mode:** This parameter can be one of the following values:
  - **LL\_OPAMP\_MODE\_FUNCTIONAL**
  - **LL\_OPAMP\_MODE\_CALIBRATION**

Return values     
 

- **None**

Notes     
 

- OPAMP mode corresponds to functional or calibration mode: functional mode: OPAMP operation in standalone, follower, ... Set functional mode using function

LL\_OPAMP\_SetFunctionalMode().calibration mode: offset calibration of the selected transistors differential pair NMOS or PMOS.

Reference Manual to  
LL API cross  
reference:

- CSR CALON LL\_OPAMP\_SetMode

### LL\_OPAMP\_GetMode

Function name

`_STATIC_INLINE uint32_t LL_OPAMP_GetMode  
(OPAMP_TypeDef * OPAMPx)`

Function description

Get OPAMP mode calibration or functional.

Parameters

- OPAMPx:** OPAMP instance

Return values

- Returned:** value can be one of the following values:
  - LL\_OPAMP\_MODE\_FUNCTIONAL
  - LL\_OPAMP\_MODE\_CALIBRATION

Notes

- OPAMP mode corresponds to functional or calibration mode:  
functional mode: OPAMP operation in standalone, follower, ...  
Set functional mode using function  
LL\_OPAMP\_SetFunctionalMode().calibration mode: offset  
calibration of the selected transistors differential pair NMOS  
or PMOS.

Reference Manual to  
LL API cross  
reference:

- CSR CALON LL\_OPAMP\_GetMode

### LL\_OPAMP\_SetFunctionalMode

Function name

`_STATIC_INLINE void LL_OPAMP_SetFunctionalMode  
(OPAMP_TypeDef * OPAMPx, uint32_t FunctionalMode)`

Function description

Set OPAMP functional mode by setting internal connections.

Parameters

- OPAMPx:** OPAMP instance
- FunctionalMode:** This parameter can be one of the following values:
  - LL\_OPAMP\_MODE\_STANDALONE
  - LL\_OPAMP\_MODE\_FOLLOWER
  - LL\_OPAMP\_MODE\_PGA
  - LL\_OPAMP\_MODE\_PGA\_EXT\_FILT\_IO0
  - LL\_OPAMP\_MODE\_PGA\_EXT\_FILT\_IO1

Return values

- None**

Notes

- This function reset bit of calibration mode to ensure to be in functional mode, in order to have OPAMP parameters (inputs selection, ...) set with the corresponding OPAMP mode to be effective.

Reference Manual to  
LL API cross  
reference:

- CSR VMSEL LL\_OPAMP\_SetFunctionalMode

### **LL\_OPAMP\_SetInputNonInverting**

Function name

`__STATIC_INLINE void LL_OPAMP_SetInputNonInverting(  
 OPAMP_TypeDef * OPAMPx, uint32_t InputNonInverting)`

Function description

Set OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputNonInverting:** This parameter can be one of the following values: (1) Parameter specific to OPAMP instances: OPAMP4.
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO0
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO1
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO2
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO3
  - LL\_OPAMP\_INPUT\_NONINV\_DAC1\_CH1 (1)
  - LL\_OPAMP\_INPUT\_NONINV\_DAC1\_CH2 (2)
- (2) Parameter specific to OPAMP instances: OPAMP1, OPAMP3.

Return values

- **None**

### **LL\_OPAMP\_GetInputNonInverting**

Function name

`__STATIC_INLINE uint32_t LL_OPAMP_GetInputNonInverting(  
 OPAMP_TypeDef * OPAMPx)`

Function description

Get OPAMP non-inverting input connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values: (1) Parameter specific to OPAMP instances: OPAMP4.
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO0
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO1
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO2
  - LL\_OPAMP\_INPUT\_NONINVERT\_IO3
  - LL\_OPAMP\_INPUT\_NONINV\_DAC1\_CH1 (1)
  - LL\_OPAMP\_INPUT\_NONINV\_DAC1\_CH2 (2)
- (2) Parameter specific to OPAMP instances: OPAMP1, OPAMP3.

**LL\_OPAMP\_GetInputNonInvertingSecondary**

Function name

```
__STATIC_INLINE uint32_t
LL_OPAMP_GetInputNonInvertingSecondary
(OPAMP_TypeDef * OPAMPx)
```

Function description

Get OPAMP non-inverting input secondary connection.

Parameters

- **OPAMPx:** OPAMP instance

Return values

- **Returned:** value can be one of the following values: (1) Parameter specific to OPAMP instances: OPAMP4.

- LL\_OPAMP\_INPUT\_NONINVERT\_IO0\_SEC
- LL\_OPAMP\_INPUT\_NONINVERT\_IO1\_SEC
- LL\_OPAMP\_INPUT\_NONINVERT\_IO2\_SEC
- LL\_OPAMP\_INPUT\_NONINVERT\_IO3\_SEC
- LL\_OPAMP\_INPUT\_NONINV\_DAC1\_CH1\_SEC (1)
- LL\_OPAMP\_INPUT\_NONINV\_DAC1\_CH2\_SEC (2)

- (2) Parameter specific to OPAMP instances: OPAMP1, OPAMP3.

Reference Manual to  
LL API cross  
reference:

**LL\_OPAMP\_SetInputInvertingSecondary**

Function name

```
__STATIC_INLINE void
LL_OPAMP_SetInputInvertingSecondary (OPAMP_TypeDef * OPAMPx, uint32_t InputInverting)
```

Function description

Set OPAMP inverting input secondary connection.

Parameters

- **OPAMPx:** OPAMP instance
- **InputInverting:** This parameter can be one of the following values:
  - LL\_OPAMP\_INPUT\_INVERT\_IO0\_SEC
  - LL\_OPAMP\_INPUT\_INVERT\_IO1\_SEC

Return values

- **None**

Notes

- OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).

| Return values        | <ul style="list-style-type: none"> <li><b>None</b></li> </ul>                                                                                                      |

## 72.3 OPAMP Firmware driver defines

### 72.3.1 OPAMP

#### *OPAMP functional mode*

|                                |                                                                                           |
|--------------------------------|-------------------------------------------------------------------------------------------|
| LL_OPAMP_MODE_STANDALONE       | OPAMP functional mode, OPAMP operation in standalone                                      |
| LL_OPAMP_MODE_FOLLOWER         | OPAMP functional mode, OPAMP operation in follower                                        |
| LL_OPAMP_MODE_PGA              | OPAMP functional mode, OPAMP operation in PGA                                             |
| LL_OPAMP_MODE_PGA_EXT_FILT_IO0 | OPAMP functional mode, OPAMP operation in PGA with external filtering on OPAMP input IO0. |
| LL_OPAMP_MODE_PGA_EXT_FILT_IO1 | OPAMP functional mode, OPAMP operation in PGA with external filtering on OPAMP input IO1. |

#### *Definitions of OPAMP hardware constraints delays*

LL\_OPAMP\_DELAY\_STARTUP\_US    Delay for OPAMP startup time

#### *OPAMP input inverting*

|                           |                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LL_OPAMP_INPUT_INVERT_IO0 | OPAMP inverting input connected to GPIO pin (pin PC5 for OPAMP1, pin PC5 for OPAMP2, pin PB10 for OPAMP3, pin PB10 for OPAMP4). Note: OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin). |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                                  |                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LL_OPAMP_INPUT_INVERT_IO1        | OPAMP inverting input connected to GPIO pin (pin PA3 for OPAMP1, pin PA5 for OPAMP2, pin PB2 for OPAMP3, pin PD8 for OPAMP4). Note: OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin). |
| LL_OPAMP_INPUT_INVERT_CONNECT_NO | OPAMP inverting input not externally connected (intended for OPAMP in mode follower or PGA without external capacitors for filtering). Note: On this STM32 serie, this literal include cases of value 0x11 for mode follower and value 0x10 for mode PGA.                                                                                                 |

***OPAMP input inverting secondary***

|                               |                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LL_OPAMP_INPUT_INVERT_IO0_SEC | OPAMP inverting input secondary connected to GPIO pin (pin PC5 for OPAMP1, pin PC5 for OPAMP2, pin PB10 for OPAMP3, pin PB10 for OPAMP4). Note: OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin). |
| LL_OPAMP_INPUT_INVERT_IO1_SEC | OPAMP inverting input secondary connected to GPIO pin (pin PA3 for OPAMP1, pin PA5 for OPAMP2, pin PB2 for OPAMP3, pin PD8 for OPAMP4). Note: OPAMP inverting input is used with OPAMP in mode standalone or PGA with external capacitors for filtering circuit. Otherwise (OPAMP in mode follower), OPAMP inverting input is not used (not connected to GPIO pin).   |

***OPAMP inputs multiplexer mode***

|                             |                                                                |
|-----------------------------|----------------------------------------------------------------|
| LL_OPAMP_INPUT_MUX_DISABLE  | OPAMP inputs multiplexer mode dosabled.                        |
| LL_OPAMP_INPUT_MUX_TIM1_CH6 | OPAMP inputs multiplexer mode enabled, controlled by TIM1 CC6. |

***OPAMP input non-inverting***

|                              |                                                                                                                                     |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| LL_OPAMP_INPUT_NONINVERT_IO0 | OPAMP non inverting input connected to GPIO pin (pin PA1 for OPAMP1, pin PA7 for OPAMP2, pin PB0 for OPAMP3, pin PB13 for OPAMP4)   |
| LL_OPAMP_INPUT_NONINVERT_IO1 | OPAMP non inverting input connected to GPIO pin (pin PA7 for OPAMP1, pin PD14 for OPAMP2, pin PB13 for OPAMP3, pin PD11 for OPAMP4) |
| LL_OPAMP_INPUT_NONINVERT_IO2 | OPAMP non inverting input connected to GPIO pin (pin PA3 for OPAMP1, pin PB0 for OPAMP2, pin PA1 for OPAMP3, pin PB11 for           |

|                                                   |                                                                                                                                               |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
|                                                   | OPAMP4)                                                                                                                                       |
| LL_OPAMP_INPUT_NONINVERT_IO3                      | OPAMP non inverting input connected to GPIO pin (pin PA5 for OPAMP1, pin PB14 for OPAMP2, pin PA5 for OPAMP3, pin PA4 for OPAMP4)             |
| LL_OPAMP_INPUT_NONINV_DAC1_CH1                    | OPAMP non inverting input connected to DAC1 channel1 output (specific to OPAMP instances: OPAMP4)                                             |
| LL_OPAMP_INPUT_NONINV_DAC1_CH2                    | OPAMP non inverting input connected to DAC1 channel2 output (specific to OPAMP instances: OPAMP1, OPAMP3)                                     |
| <b><i>OPAMP input non-inverting secondary</i></b> |                                                                                                                                               |
| LL_OPAMP_INPUT_NONINVERT_IO0_SEC                  | OPAMP non inverting input secondary connected to GPIO pin (pin PA1 for OPAMP1, pin PA7 for OPAMP2, pin PB0 for OPAMP3, pin PB13 for OPAMP4)   |
| LL_OPAMP_INPUT_NONINVERT_IO1_SEC                  | OPAMP non inverting input secondary connected to GPIO pin (pin PA7 for OPAMP1, pin PD14 for OPAMP2, pin PB13 for OPAMP3, pin PD11 for OPAMP4) |
| LL_OPAMP_INPUT_NONINVERT_IO2_SEC                  | OPAMP non inverting input secondary connected to GPIO pin (pin PA3 for OPAMP1, pin PB0 for OPAMP2, pin PA1 for OPAMP3, pin PB11 for OPAMP4)   |
| LL_OPAMP_INPUT_NONINVERT_IO3_SEC                  | OPAMP non inverting input secondary connected to GPIO pin (pin PA5 for OPAMP1, pin PD14 for OPAMP2, pin PA5 for OPAMP3, pin PA4 for OPAMP4)   |
| LL_OPAMP_INPUT_NONINV_DAC1_CH1_SEC                | OPAMP non inverting input secondary connected to DAC1 channel1 output (specific to OPAMP instances: OPAMP4)                                   |
| LL_OPAMP_INPUT_NONINV_DAC1_CH2_SEC                | OPAMP non inverting input secondary connected to DAC1 channel2 output (specific to OPAMP instances: OPAMP1, OPAMP3)                           |

***OPAMP mode calibration or functional.***

LL\_OPAMP\_MODE\_FUNCTIONAL OPAMP functional mode

LL\_OPAMP\_MODE\_CALIBRATION OPAMP calibration mode

***OPAMP PGA gain (relevant when OPAMP is in functional mode PGA)***

LL\_OPAMP\_PGA\_GAIN\_2 OPAMP PGA gain 2

LL\_OPAMP\_PGA\_GAIN\_4 OPAMP PGA gain 4

`LL_OPAMP_PGA_GAIN_8` OPAMP PGA gain 8

`LL_OPAMP_PGA_GAIN_16` OPAMP PGA gain 16

***OPAMP trimming mode***

`LL_OPAMP_TRIMMING_FACTORY` OPAMP trimming factors set to factory values

`LL_OPAMP_TRIMMING_USER` OPAMP trimming factors set to user values

***OPAMP trimming of transistors differential pair NMOS or PMOS***

`LL_OPAMP_TRIMMING_NMOS_VREF_90PC_VDDA` OPAMP trimming of transistors differential pair NMOS (internal reference voltage set to  $0.9^*Vdda$ ). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

`LL_OPAMP_TRIMMING_NMOS_VREF_50PC_VDDA` OPAMP trimming of transistors differential pair NMOS (internal reference voltage set to  $0.5^*Vdda$ ).

`LL_OPAMP_TRIMMING_PMOS_VREF_10PC_VDDA` OPAMP trimming of transistors differential pair PMOS (internal reference voltage set to  $0.1^*Vdda$ ). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

`LL_OPAMP_TRIMMING_PMOS_VREF_3_3PC_VDDA` OPAMP trimming of transistors differential pair PMOS (internal reference voltage set to  $0.33^*Vdda$ ).

`LL_OPAMP_TRIMMING_NMOS` OPAMP trimming of transistors differential pair NMOS (internal reference voltage set to  $0.9^*Vdda$ ). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

`LL_OPAMP_TRIMMING_PMOS` OPAMP trimming of transistors differential pair PMOS (internal reference voltage set to  $0.1^*Vdda$ ). Default parameters to be used for calibration using two trimming steps (one with each transistors differential pair NMOS and PMOS).

***OPAMP internal reference voltage path state to output***

`LL_OPAMP_VREF_OUTPUT_DISABLE` OPAMP internal reference voltage path to

output is disabled.

`LL_OPAMP_VREF_OUTPUT_ENABLE` OPAMP internal reference voltage path to output is enabled.

***Common write and read registers macro***

`LL_OPAMP_WriteReg` **Description:**

- Write a value in OPAMP register.

**Parameters:**

- `__INSTANCE__`: OPAMP Instance
- `__REG__`: Register to be written
- `__VALUE__`: Value to be written in the register

**Return value:**

- None

`LL_OPAMP_ReadReg` **Description:**

- Read a value in OPAMP register.

**Parameters:**

- `__INSTANCE__`: OPAMP Instance
- `__REG__`: Register to be read

**Return value:**

- Register: value

## 73 LL PWR Generic Driver

### 73.1 PWR Firmware driver API description

#### 73.1.1 Detailed description of functions

##### **LL\_PWR\_EnableSDADC**

|                                             |                                                                                                                                                                                                                                                                                                                             |

– LL\_PWR\_SDADC\_ANALOG3

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CR ENSD1 LL\_PWR\_IsEnabledSDADC
- CR ENSD2 LL\_PWR\_IsEnabledSDADC
- CR ENSD3 LL\_PWR\_IsEnabledSDADC

### **LL\_PWR\_EnableBkUpAccess**

Function name **\_\_STATIC\_INLINE void LL\_PWR\_EnableBkUpAccess (void )**

Function description Enable access to the backup domain.

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CR DBP LL\_PWR\_EnableBkUpAccess

### **LL\_PWR\_DisableBkUpAccess**

Function name **\_\_STATIC\_INLINE void LL\_PWR\_DisableBkUpAccess (void )**

Function description Disable access to the backup domain.

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CR DBP LL\_PWR\_DisableBkUpAccess

### **LL\_PWR\_IsEnabledBkUpAccess**

Function name **\_\_STATIC\_INLINE uint32\_t LL\_PWR\_IsEnabledBkUpAccess (void )**

Function description Check if the backup domain is enabled.

Return values

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

- CR DBP LL\_PWR\_IsEnabledBkUpAccess

### **LL\_PWR\_SetRegulModeDS**

Function name **\_\_STATIC\_INLINE void LL\_PWR\_SetRegulModeDS (uint32\_t RegulMode)**

Function description Set voltage Regulator mode during deep sleep mode.

Parameters

- **RegulMode:** This parameter can be one of the following values:
  - LL\_PWR\_REGU\_DSMODE\_MAIN
  - LL\_PWR\_REGU\_DSMODE\_LOW\_POWER

Return values

- **None**

Reference Manual to  
LL API cross

- CR LPDS LL\_PWR\_SetRegulModeDS

**LL\_PWR\_IsEnabledWakeUpPin**

Function name      **`_STATIC_INLINE uint32_t LL_PWR_IsEnabledWakeUpPin  
(uint32_t WakeUpPin)`**

Function description      Check if the WakeUp PINx functionality is enabled.

Parameters     
 

- **WakeUpPin:** This parameter can be one of the following values: (\*) not available on all devices
  - `LL_PWR_WAKEUP_PIN1`
  - `LL_PWR_WAKEUP_PIN2`
  - `LL_PWR_WAKEUP_PIN3` (\*)

Return values     
 

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

- CSR EWUP2 LL\_PWR\_IsEnabledWakeUpPin
- CSR EWUP3 LL\_PWR\_IsEnabledWakeUpPin

**LL\_PWR\_IsActiveFlag\_WU**

Function name      **`_STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_WU (void )`**

Function description      Get Wake-up Flag.

Return values     
 

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:     
 

- CSR WUF LL\_PWR\_IsActiveFlag\_WU

**LL\_PWR\_IsActiveFlag\_SB**

Function name      **`_STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_SB (void )`**

Function description      Get Standby Flag.

Return values     
 

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:     
 

- CSR SBF LL\_PWR\_IsActiveFlag\_SB

**LL\_PWR\_IsActiveFlag\_PVDO**

Function name      **`_STATIC_INLINE uint32_t LL_PWR_IsActiveFlag_PVDO (void )`**

Function description      Indicate whether VDD voltage is below the selected PVD threshold.

Return values     
 

- **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:

| LL_PWR_PVDLEVEL_3 | Voltage threshold detected by PVD 2.5 V |
| LL_PWR_PVDLEVEL_4 | Voltage threshold detected by PVD 2.6 V |
| LL_PWR_PVDLEVEL_5 | Voltage threshold detected by PVD 2.7 V |
| LL_PWR_PVDLEVEL_6 | Voltage threshold detected by PVD 2.8 V |
| LL_PWR_PVDLEVEL_7 | Voltage threshold detected by PVD 2.9 V |

**Regulator Mode In Deep Sleep Mode**

|                              |                                                           |
|------------------------------|-----------------------------------------------------------|
| LL_PWR_REGU_DSMODE_MAIN      | Voltage Regulator in main mode during deepsleep mode      |
| LL_PWR_REGU_DSMODE_LOW_POWER | Voltage Regulator in low-power mode during deepsleep mode |

**Wakeup Pins**

|                    |                                             |
|--------------------|---------------------------------------------|
| LL_PWR_WAKEUP_PIN1 | WKUP pin 1 : PA0                            |
| LL_PWR_WAKEUP_PIN2 | WKUP pin 2 : PC13                           |
| LL_PWR_WAKEUP_PIN3 | WKUP pin 3 : PE6 or PA2 according to device |

**Common write and read registers Macros**

|                 |                                                                                    |
|-----------------|------------------------------------------------------------------------------------|
| LL_PWR_WriteReg | <b>Description:</b>                                                                |
|                 | <ul style="list-style-type: none"> <li>• Write a value in PWR register.</li> </ul> |

**Parameters:**

- \_\_REG\_\_: Register to be written
- \_\_VALUE\_\_: Value to be written in the register

**Return value:**

- None

[LL\\_PWR\\_ReadReg](#)**Description:**

- Read a value in PWR register.

**Parameters:**

- \_\_REG\_\_: Register to be read

**Return value:**

- Register: value

## 74 LL RCC Generic Driver

### 74.1 RCC Firmware driver registers structures

#### 74.1.1 LL\_RCC\_ClocksTypeDef

##### Data Fields

- *uint32\_t SYSCLK\_Frequency*
- *uint32\_t HCLK\_Frequency*
- *uint32\_t PCLK1\_Frequency*
- *uint32\_t PCLK2\_Frequency*

##### Field Documentation

- *uint32\_t LL\_RCC\_ClocksTypeDef::SYSCLK\_Frequency*  
SYSCLK clock frequency
- *uint32\_t LL\_RCC\_ClocksTypeDef::HCLK\_Frequency*  
HCLK clock frequency
- *uint32\_t LL\_RCC\_ClocksTypeDef::PCLK1\_Frequency*  
PCLK1 clock frequency
- *uint32\_t LL\_RCC\_ClocksTypeDef::PCLK2\_Frequency*  
PCLK2 clock frequency

### 74.2 RCC Firmware driver API description

#### 74.2.1 Detailed description of functions

##### LL\_RCC\_HSE\_EnableCSS

|                                                   |                                                                                 |
|---------------------------------------------------|---------------------------------------------------------------------------------|
| Function name                                     | <code>__STATIC_INLINE void LL_RCC_HSE_EnableCSS (void )</code>                  |
| Function description                              | Enable the Clock Security System.                                               |
| Return values                                     | <ul style="list-style-type: none"><li>• <b>None</b></li></ul>                   |
| Reference Manual to<br>LL API cross<br>reference: | <ul style="list-style-type: none"><li>• CR CSSON LL_RCC_HSE_EnableCSS</li></ul> |

##### LL\_RCC\_HSE\_DisableCSS

|                      |                                                                                                         |
|----------------------|---------------------------------------------------------------------------------------------------------|
| Function name        | <code>__STATIC_INLINE void LL_RCC_HSE_DisableCSS (void )</code>                                         |
| Function description | Disable the Clock Security System.                                                                      |
| Return values        | <ul style="list-style-type: none"><li>• <b>None</b></li></ul>                                           |
| Notes                | <ul style="list-style-type: none"><li>• Cannot be disabled in HSE is ready (only by hardware)</li></ul> |

**LL\_RCC\_HSE\_EnableBypass**

|                                                   |                                                                                     |

### **LL\_RCC\_GetUSARTClockSource**

Function name      **`_STATIC_INLINE uint32_t LL_RCC_GetUSARTClockSource  
(uint32_t USARTx)`**

Function description

Get USARTx clock source.

Parameters

- **USARTx:** This parameter can be one of the following values:  
(\*) value not defined in all devices.
  - LL\_RCC\_USART1\_CLKSOURCE
  - LL\_RCC\_USART2\_CLKSOURCE (\*)
  - LL\_RCC\_USART3\_CLKSOURCE (\*)

Return values

- **Returned:** value can be one of the following values: (\*)  
value not defined in all devices.
  - LL\_RCC\_USART1\_CLKSOURCE\_PCLK1 (\*)
  - LL\_RCC\_USART1\_CLKSOURCE\_PCLK2 (\*)
  - LL\_RCC\_USART1\_CLKSOURCE\_SYSCLK
  - LL\_RCC\_USART1\_CLKSOURCE\_LSE
  - LL\_RCC\_USART1\_CLKSOURCE\_HSI
  - LL\_RCC\_USART2\_CLKSOURCE\_PCLK1 (\*)
  - LL\_RCC\_USART2\_CLKSOURCE\_SYSCLK (\*)
  - LL\_RCC\_USART2\_CLKSOURCE\_LSE (\*)
  - LL\_RCC\_USART2\_CLKSOURCE\_HSI (\*)
  - LL\_RCC\_USART3\_CLKSOURCE\_PCLK1 (\*)

**LL\_RCC\_PLL\_Enable**

Function name **`__STATIC_INLINE void LL_RCC_PLL_Enable (void )`**

Function description Enable PLL.

Return values • **None**

Reference Manual to  
LL API cross  
reference:  
CR PLLON LL\_RCC\_PLL\_Enable

**LL\_RCC\_PLL\_Disable**

Function name **`__STATIC_INLINE void LL_RCC_PLL_Disable (void )`**

Function description Disable PLL.

Return values • **None**

Notes • Cannot be disabled if the PLL clock is used as the system clock

Reference Manual to  
LL API cross  
reference:  
CR PLLON LL\_RCC\_PLL\_Disable

**LL\_RCC\_PLL\_IsReady**

Function name **`__STATIC_INLINE uint32_t LL_RCC_PLL_IsReady (void )`**

Function description Check if PLL Ready.

Return values • **State:** of bit (1 or 0).

Reference Manual to  
LL API cross  
reference:  
CR PLLRDY LL\_RCC\_PLL\_IsReady

**LL\_RCC\_PLL\_ConfigDomain\_SYS**

Function name **`__STATIC_INLINE void LL_RCC_PLL_ConfigDomain_SYS  
(uint32_t Source, uint32_t PLLMul)`**

Function description Configure PLL used for SYSCLK Domain.

Parameters • **Source:** This parameter can be one of the following values:

- `LL_RCC_PLLSOURCE_HSI_DIV_2`
- `LL_RCC_PLLSOURCE_HSE_DIV_1`
- `LL_RCC_PLLSOURCE_HSE_DIV_2`
- `LL_RCC_PLLSOURCE_HSE_DIV_3`
- `LL_RCC_PLLSOURCE_HSE_DIV_4`
- `LL_RCC_PLLSOURCE_HSE_DIV_5`
- `LL_RCC_PLLSOURCE_HSE_DIV_6`
- `LL_RCC_PLLSOURCE_HSE_DIV_7`
- `LL_RCC_PLLSOURCE_HSE_DIV_8`
- `LL_RCC_PLLSOURCE_HSE_DIV_9`
- `LL_RCC_PLLSOURCE_HSE_DIV_10`
- `LL_RCC_PLLSOURCE_HSE_DIV_11`
- `LL_RCC_PLLSOURCE_HSE_DIV_12`

- LL\_RCC\_PLLSOURCE\_HSE\_DIV\_13
- LL\_RCC\_PLLSOURCE\_HSE\_DIV\_14
- LL\_RCC\_PLLSOURCE\_HSE\_DIV\_15
- LL\_RCC\_PLLSOURCE\_HSE\_DIV\_16
- **PLLMul:** This parameter can be one of the following values:
  - LL\_RCC\_PLL\_MUL\_2
  - LL\_RCC\_PLL\_MUL\_3
  - LL\_RCC\_PLL\_MUL\_4
  - LL\_RCC\_PLL\_MUL\_5
  - LL\_RCC\_PLL\_MUL\_6
  - LL\_RCC\_PLL\_MUL\_7
  - LL\_RCC\_PLL\_MUL\_8
  - LL\_RCC\_PLL\_MUL\_9
  - LL\_RCC\_PLL\_MUL\_10
  - LL\_RCC\_PLL\_MUL\_11
  - LL\_RCC\_PLL\_MUL\_12
  - LL\_RCC\_PLL\_MUL\_13
  - LL\_RCC\_PLL\_MUL\_14
  - LL\_RCC\_PLL\_MUL\_15
  - LL\_RCC\_PLL\_MUL\_16

Return values

- **None**

Reference Manual to  
LL API cross  
reference:

- CFGR PLLSRC LL\_RCC\_PLL\_ConfigDomain\_SYS
- CFGR PLLMUL LL\_RCC\_PLL\_ConfigDomain\_SYS
- CFGR2 PREDIV LL\_RCC\_PLL\_ConfigDomain\_SYS

### **LL\_RCC\_PLL\_GetMainSource**

Function name      **\_\_STATIC\_INLINE uint32\_t LL\_RCC\_PLL\_GetMainSource(void )**

Function description

Get the oscillator used as PLL clock source.

Return values

- **Returned:** value can be one of the following values: (\*)  
value not defined in all devices
  - LL\_RCC\_PLLSOURCE\_HSI (\*)
  - LL\_RCC\_PLLSOURCE\_HSI\_DIV\_2 (\*)
  - LL\_RCC\_PLLSOURCE\_HSE

Reference Manual to  
LL API cross  
reference:

- CFGR PLLSRC LL\_RCC\_PLL\_GetMainSource

### **LL\_RCC\_PLL\_GetMultiplicator**

Function name      **\_\_STATIC\_INLINE uint32\_t LL\_RCC\_PLL\_GetMultiplicator(void )**

Function description

Get PLL multiplication Factor.

Return values

- **Returned:** value can be one of the following values:
  - LL\_RCC\_PLL\_MUL\_2
  - LL\_RCC\_PLL\_MUL\_3
  - LL\_RCC\_PLL\_MUL\_4
  - LL\_RCC\_PLL\_MUL\_5

- LL\_RCC\_PLL\_MUL\_6
- LL\_RCC\_PLL\_MUL\_7
- LL\_RCC\_PLL\_MUL\_8
- LL\_RCC\_PLL\_MUL\_9
- LL\_RCC\_PLL\_MUL\_10
- LL\_RCC\_PLL\_MUL\_11
- LL\_RCC\_PLL\_MUL\_12
- LL\_RCC\_PLL\_MUL\_13
- LL\_RCC\_PLL\_MUL\_14
- LL\_RCC\_PLL\_MUL\_15
- LL\_RCC\_PLL\_MUL\_16

Reference Manual to  
LL API cross  
reference:

- CFGR PLLMUL LL\_RCC\_PLL\_GetMultiplicator

### **LL\_RCC\_PLL\_GetPrediv**

Function name **`_STATIC_INLINE uint32_t LL_RCC_PLL_GetPrediv (void )`**

Function description Get PREDIV division factor for the main PLL.

Return values

- **Returned:** value can be one of the following values:
  - LL\_RCC\_PREDIV\_DIV\_1
  - LL\_RCC\_PREDIV\_DIV\_2
  - LL\_RCC\_PREDIV\_DIV\_3
  - LL\_RCC\_PREDIV\_DIV\_4
  - LL\_RCC\_PREDIV\_DIV\_5
  - LL\_RCC\_PREDIV\_DIV\_6
  - LL\_RCC\_PREDIV\_DIV\_7
  - LL\_RCC\_PREDIV\_DIV\_8
  - LL\_RCC\_PREDIV\_DIV\_9
  - LL\_RCC\_PREDIV\_DIV\_10
  - LL\_RCC\_PREDIV\_DIV\_11
  - LL\_RCC\_PREDIV\_DIV\_12
  - LL\_RCC\_PREDIV\_DIV\_13
  - LL\_RCC\_PREDIV\_DIV\_14
  - LL\_RCC\_PREDIV\_DIV\_15
  - LL\_RCC\_PREDIV\_DIV\_16

Notes

- They can be written only when the PLL is disabled

- Return values
- **I2S:** clock frequency (in Hz)
    - LL\_RCC\_PERIPH\_FREQUENCY\_NA indicates that external clock is used

### **LL\_RCC\_GetUSBClockFreq**

- Function name      **uint32\_t LL\_RCC\_GetUSBClockFreq (uint32\_t USBxSource)**
- Function description      Return USBx clock frequency.
- Parameters
- **USBxSource:** This parameter can be one of the following values:
    - LL\_RCC\_USB\_CLKSOURCE
- Return values
- **USB:** clock frequency (in Hz)
    - LL\_RCC\_PERIPH\_FREQUENCY\_NO indicates that oscillator (HSI48) or PLL is not ready
    - LL\_RCC\_PERIPH\_FREQUENCY\_NA indicates that no clock source selected

### **LL\_RCC\_GetADCClockFreq**

- Function name      **uint32\_t LL\_RCC\_GetADCClockFreq (uint32\_t ADCxSource)**
- Function description      Return ADCx clock frequency.
- Parameters
- **ADCxSource:** This parameter can be one of the following values: (\*) value not defined in all devices
    - LL\_RCC\_ADC\_CLKSOURCE (\*)
    - LL\_RCC\_ADC1\_CLKSOURCE (\*)
    - LL\_RCC\_ADC12\_CLKSOURCE (\*)
    - LL\_RCC\_ADC34\_CLKSOURCE (\*)
- Return values
- **ADC:** clock frequency (in Hz)

### **LL\_RCC\_GetTIMClockFreq**

- Function name      **uint32\_t LL\_RCC\_GetTIMClockFreq (uint32\_t TIMxSource)**
- Function description      Return TIMx clock frequency.
- Parameters
- **TIMxSource:** This parameter can be one of the following values: (\*) value not defined in all devices
    - LL\_RCC\_TIM1\_CLKSOURCE
    - LL\_RCC\_TIM8\_CLKSOURCE (\*)
    - LL\_RCC\_TIM15\_CLKSOURCE (\*)
    - LL\_RCC\_TIM16\_CLKSOURCE (\*)
    - LL\_RCC\_TIM17\_CLKSOURCE (\*)
    - LL\_RCC\_TIM20\_CLKSOURCE (\*)
    - LL\_RCC\_TIM2\_CLKSOURCE (\*)
    - LL\_RCC\_TIM34\_CLKSOURCE (\*)
- Return values
- **TIM:** clock frequency (in Hz)

**LL\_RCC\_GetHRTIMClockFreq**

Function name      **uint32\_t LL\_RCC\_GetHRTIMClockFreq (uint32\_t HRTIMxSource)**

Function description

## 74.3 RCC Firmware driver defines

### 74.3.1 RCC

*Peripheral ADC12 clock source selection*

|                                 |                                               |
|---------------------------------|-----------------------------------------------|
| LL_RCC_ADC12_CLKSRC_HCLK        | ADC12 clock disabled, ADC12 can use AHB clock |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_1   | ADC12 PLL clock divided by 1                  |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_2   | ADC12 PLL clock divided by 2                  |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_4   | ADC12 PLL clock divided by 4                  |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_6   | ADC12 PLL clock divided by 6                  |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_8   | ADC12 PLL clock divided by 8                  |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_10  | ADC12 PLL clock divided by 10                 |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_12  | ADC12 PLL clock divided by 12                 |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_16  | ADC12 PLL clock divided by 16                 |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_32  | ADC12 PLL clock divided by 32                 |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_64  | ADC12 PLL clock divided by 64                 |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_128 | ADC12 PLL clock divided by 128                |
| LL_RCC_ADC12_CLKSRC_PLL_DIV_256 | ADC12 PLL clock divided by 256                |

*Peripheral ADC34 clock source selection*

|                                 |                                               |
|---------------------------------|-----------------------------------------------|
| LL_RCC_ADC34_CLKSRC_HCLK        | ADC34 clock disabled, ADC34 can use AHB clock |
| LL_RCC_ADC34_CLKSRC_PLL_DIV_1   | ADC34 PLL clock divided by 1                  |
| LL_RCC_ADC34_CLKSRC_PLL_DIV_2   | ADC34 PLL clock divided by 2                  |
| LL_RCC_ADC34_CLKSRC_PLL_DIV_4   | ADC34 PLL clock divided by 4                  |

LL\_RCC\_SYSCLK\_DIV\_64    SYSCLK divided by 64  
 LL\_RCC\_SYSCLK\_DIV\_128    SYSCLK divided by 128  
 LL\_RCC\_SYSCLK\_DIV\_256    SYSCLK divided by 256  
 LL\_RCC\_SYSCLK\_DIV\_512    SYSCLK divided by 512

**System clock switch**

LL\_RCC\_SYS\_CLKSOURCE\_HSI    HSI selection as system clock  
 LL\_RCC\_SYS\_CLKSOURCE\_HSE    HSE selection as system clock  
 LL\_RCC\_SYS\_CLKSOURCE\_PLL    PLL selection as system clock

**System clock switch status**

LL\_RCC\_SYS\_CLKSOURCE\_STATUS\_HSI    HSI used as system clock  
 LL\_RCC\_SYS\_CLKSOURCE\_STATUS\_HSE    HSE used as system clock  
 LL\_RCC\_SYS\_CLKSOURCE\_STATUS\_PLL    PLL used as system clock

**TIMx Peripheral TIM get clock source**

LL\_RCC\_TIM1\_CLKSOURCE    TIM1 Clock source selection  
 LL\_RCC\_TIM8\_CLKSOURCE    TIM8 Clock source selection

**Peripheral TIM clock source selection**

LL\_RCC\_TIM1\_CLKSOURCE\_PCLK2    PCLK2 used as TIM1 clock source  
 LL\_RCC\_TIM1\_CLKSOURCE\_PLL    PLL clock used as TIM1 clock source  
 LL\_RCC\_TIM8\_CLKSOURCE\_PCLK2    PCLK2 used as TIM8 clock source  
 LL\_RCC\_TIM8\_CLKSOURCE\_PLL    PLL clock used as TIM8 clock source

**Peripheral UART get clock source**

LL\_RCC\_UART4\_CLKSOURCE    UART4 Clock source selection  
 LL\_RCC\_UART5\_CLKSOURCE    UART5 Clock source selection

**Peripheral UART clock source selection**

LL\_RCC\_UART4\_CLKSOURCE\_PCLK1    PCLK1 clock used as UART4 clock source  
 LL\_RCC\_UART4\_CLKSOURCE\_SYSCLK    System clock selected as UART4 clock source  
 LL\_RCC\_UART4\_CLKSOURCE\_LSE    LSE oscillator clock used as UART4 clock source  
 LL\_RCC\_UART4\_CLKSOURCE\_HSI    HSI oscillator clock used as UART4 clock source  
 LL\_RCC\_UART5\_CLKSOURCE\_PCLK1    PCLK1 clock used as UART5 clock source  
 LL\_RCC\_UART5\_CLKSOURCE\_SYSCLK    System clock selected as UART5 clock source  
 LL\_RCC\_UART5\_CLKSOURCE\_LSE    LSE oscillator clock used as UART5 clock source  
 LL\_RCC\_UART5\_CLKSOURCE\_HSI    HSI oscillator clock used as UART5 clock source

`LL_RCC_USB_CLKSOURCE_PLL_DIV_1_5` USB prescaler is PLL clock divided by 1.5

***Calculate frequencies*****\_\_LL\_RCC\_CALC\_PLLCL** **Description:**

`K_FREQ`

- Helper macro to calculate the PLLCLK frequency.

**Parameters:**

- `__INPUTFREQ__`: PLL Input frequency (based on HSE div Prediv / HSI div 2)
- `__PLLMUL__`: This parameter can be one of the following values:
  - `LL_RCC_PLL_MUL_2`
  - `LL_RCC_PLL_MUL_3`
  - `LL_RCC_PLL_MUL_4`

- LL\_RCC\_PLL\_MUL\_5
- LL\_RCC\_PLL\_MUL\_6
- LL\_RCC\_PLL\_MUL\_7
- LL\_RCC\_PLL\_MUL\_8
- LL\_RCC\_PLL\_MUL\_9
- LL\_RCC\_PLL\_MUL\_10
- LL\_RCC\_PLL\_MUL\_11
- LL\_RCC\_PLL\_MUL\_12
- LL\_RCC\_PLL\_MUL\_13
- LL\_RCC\_PLL\_MUL\_14
- LL\_RCC\_PLL\_MUL\_15
- LL\_RCC\_PLL\_MUL\_16

**Return value:**

- PLL: clock frequency (in Hz)

**Notes:**

- ex: \_\_LL\_RCC\_CALC\_PLLCLK\_FREQ (HSE\_VALUE / (LL\_RCC\_PLL\_GetPrediv () + 1), LL\_RCC\_PLL\_GetMultiplicator());

[\\_\\_LL\\_RCC\\_CALC\\_HCLK\\_FREQ](#)**Description:**

- Helper macro to calculate the HCLK frequency.

**Parameters:**

- \_\_SYSCLKFREQ\_\_: SYSCLK frequency (based on HSE/HSI/PLLCLK)
- \_\_AHBPRESCALER\_\_: This parameter can be one of the following values:
  - LL\_RCC\_SYSCLK\_DIV\_1
  - LL\_RCC\_SYSCLK\_DIV\_2
  - LL\_RCC\_SYSCLK\_DIV\_4
  - LL\_RCC\_SYSCLK\_DIV\_8
  - LL\_RCC\_SYSCLK\_DIV\_16
  - LL\_RCC\_SYSCLK\_DIV\_64
  - LL\_RCC\_SYSCLK\_DIV\_128
  - LL\_RCC\_SYSCLK\_DIV\_256
  - LL\_RCC\_SYSCLK\_DIV\_512

**Return value:**

- HCLK: clock frequency (in Hz)

**Notes:**

- : \_\_AHBPRESCALER\_\_ be retrieved by LL\_RCC\_GetAHBPrescaler ex: \_\_LL\_RCC\_CALC\_HCLK\_FREQ(LL\_RCC\_GetAHBPrescaler())

[\\_\\_LL\\_RCC\\_CALC\\_PCLK1\\_FREQ](#)**Description:**

- Helper macro to calculate the PCLK1 frequency (ABP1)

**Parameters:**

- `__HCLKFREQ__`: HCLK frequency
- `__APB1PRESCALER__`: This parameter can be one of the following values:
  - `LL_RCC_APB1_DIV_1`
  - `LL_RCC_APB1_DIV_2`
  - `LL_RCC_APB1_DIV_4`
  - `LL_RCC_APB1_DIV_8`
  - `LL_RCC_APB1_DIV_16`

**Return value:**

- PCLK1: clock frequency (in Hz)

**Notes:**

- : `__APB1PRESCALER__` be retrieved by `LL_RCC_GetAPB1Prescaler` ex:  
`__LL_RCC_CALC_PCLK1_FREQ(LL_RCC_GetAPB1P  
rescaler())`

`__LL_RCC_CALC_PCLK2  
_FREQ`**Description:**

- Helper macro to calculate the PCLK2 frequency (ABP2)

**Parameters:**

- `__HCLKFREQ__`: HCLK frequency
- `__APB2PRESCALER__`: This parameter can be one of the following values:
  - `LL_RCC_APB2_DIV_1`
  - `LL_RCC_APB2_DIV_2`
  - `LL_RCC_APB2_DIV_4`
  - `LL_RCC_APB2_DIV_8`
  - `LL_RCC_APB2_DIV_16`

**Return value:**

- PCLK2: clock frequency (in Hz)

**Notes:**

- : `__APB2PRESCALER__` be retrieved by `LL_RCC_GetAPB2Prescaler` ex:  
`__LL_RCC_CALC_PCLK2_FREQ(LL_RCC_GetAPB2P  
rescaler())`

***Common Write and read registers Macros***`LL_RCC_WriteReg`**Description:**

- Write a value in RCC register.

**Parameters:**

- `__REG__`: Register to be written
- `__VALUE__`: Value to be written in the register

**Return value:**

- None

LL\_RCC\_ReadReg

**Description:**

- Read a value in RCC register.

**Parameters:**

- \_\_REG\_\_: Register to be read

**Return value:**

- Register: value

## 75 LL RTC Generic Driver

### 75.1 RTC Firmware driver registers structures

#### 75.1.1 LL\_RTC\_InitTypeDef

##### Data Fields

- *uint32\_t HourFormat*
- *uint32\_t AsynchPrescaler*
- *uint32\_t SynchPrescaler*

##### Field Documentation

- ***uint32\_t LL\_RTC\_InitTypeDef::HourFormat***  
Specifies the RTC Hours Format. This parameter can be a value of **RTC\_LL\_EC\_HOURFORMAT**This feature can be modified afterwards using unitary function **LL\_RTC\_SetHourFormat()**.
- ***uint32\_t LL\_RTC\_InitTypeDef::AsynchPrescaler***  
Specifies the RTC Asynchronous Predivider value. This parameter must be a number between Min\_Data = 0x00 and Max\_Data = 0x7FThis feature can be modified afterwards using unitary function **LL\_RTC\_SetAsynchPrescaler()**.
- ***uint32\_t LL\_RTC\_InitTypeDef::SynchPrescaler***  
Specifies the RTC Synchronous Predivider value. This parameter must be a number between Min\_Data = 0x00 and Max\_Data = 0x7FFFThis feature can be modified afterwards using unitary function **LL\_RTC\_SetSynchPrescaler()**.

#### 75.1.2 LL\_RTC\_TimeTypeDef

##### Data Fields

- *uint32\_t TimeFormat*
- *uint8\_t Hours*
- *uint8\_t Minutes*
- *uint8\_t Seconds*

##### Field Documentation

- ***uint32\_t LL\_RTC\_TimeTypeDef::TimeFormat***  
Specifies the RTC AM/PM Time. This parameter can be a value of **RTC\_LL\_EC\_TIME\_FORMAT**This feature can be modified afterwards using unitary function **LL\_RTC\_TIME\_SetFormat()**.
- ***uint8\_t LL\_RTC\_TimeTypeDef::Hours***  
Specifies the RTC Time Hours. This parameter must be a number between Min\_Data = 0 and Max\_Data = 12 if the **LL\_RTC\_TIME\_FORMAT\_PM** is selected. This parameter must be a number between Min\_Data = 0 and Max\_Data = 23 if the **LL\_RTC\_TIME\_FORMAT\_AM\_OR\_24** is selected.This feature can be modified afterwards using unitary function **LL\_RTC\_TIME\_SetHour()**.
- ***uint8\_t LL\_RTC\_TimeTypeDef::Minutes***  
Specifies the RTC Time Minutes. This parameter must be a number between Min\_Data = 0 and Max\_Data = 59This feature can be modified afterwards using unitary function **LL\_RTC\_TIME\_SetMinute()**.
- ***uint8\_t LL\_RTC\_TimeTypeDef::Seconds***  
Specifies the RTC Time Seconds. This parameter must be a number between

Min\_Data = 0 and Max\_Data = 59This feature can be modified afterwards using unitary function **LL\_RTC\_TIME\_SetSecond()**.

### 75.1.3 LL\_RTC\_DateTypeDef

#### Data Fields

- *uint8\_t WeekDay*
- *uint8\_t Month*
- *uint8\_t Day*
- *uint8\_t Year*

#### Field Documentation

- ***uint8\_t LL\_RTC\_DateTypeDef::WeekDay***  
Specifies the RTC Date WeekDay. This parameter can be a value of **RTC\_LL\_EC\_WEEKDAY**This feature can be modified afterwards using unitary function **LL\_RTC\_DATE\_SetWeekDay()**.
- ***uint8\_t LL\_RTC\_DateTypeDef::Month***  
Specifies the RTC Date Month. This parameter can be a value of **RTC\_LL\_EC\_MONTH**This feature can be modified afterwards using unitary function **LL\_RTC\_DATE\_SetMonth()**.
- ***uint8\_t LL\_RTC\_DateTypeDef::Day***  
Specifies the RTC Date Day. This parameter must be a number between Min\_Data = 1 and Max\_Data = 31This feature can be modified afterwards using unitary function **LL\_RTC\_DATE\_SetDay()**.
- ***uint8\_t LL\_RTC\_DateTypeDef::Year***  
Specifies the RTC Date Year. This parameter must be a number between Min\_Data = 0 and Max\_Data = 99This feature can be modified afterwards using unitary function **LL\_RTC\_DATE\_SetYear()**.

### 75.1.4 LL\_RTC\_AlarmTypeDef

#### Data Fields

- ***LL\_RTC\_TimeTypeDef AlarmTime***
- ***uint32\_t AlarmMask***
- ***uint32\_t AlarmDateWeekDaySel***
- ***uint8\_t AlarmDateWeekDay***

#### Field Documentation

- ***LL\_RTC\_TimeTypeDef LL\_RTC\_AlarmTypeDef::AlarmTime***  
Specifies the RTC Alarm Time members.
- ***uint32\_t LL\_RTC\_AlarmTypeDef::AlarmMask***  
Specifies the RTC Alarm Masks. This parameter can be a value of **RTC\_LL\_EC\_ALMA\_MASK** for ALARM A or **RTC\_LL\_EC\_ALMB\_MASK** for ALARM B.This feature can be modified afterwards using unitary function **LL\_RTC\_ALMA\_SetMask()** for ALARM A or **LL\_RTC\_ALMB\_SetMask()** for ALARM B
- ***uint32\_t LL\_RTC\_AlarmTypeDef::AlarmDateWeekDaySel***  
Specifies the RTC Alarm is on day or WeekDay. This parameter can be a value of **RTC\_LL\_EC\_ALMA\_WEEKDAY\_SELECTION** for ALARM A or **RTC\_LL\_EC\_ALMB\_WEEKDAY\_SELECTION** for ALARM BThis feature can be modified afterwards using unitary function **LL\_RTC\_ALMA\_EnableWeekday()** or **LL\_RTC\_ALMA\_DisableWeekday()** for ALARM A or **LL\_RTC\_ALMB\_EnableWeekday()** or **LL\_RTC\_ALMB\_DisableWeekday()** for ALARM B

- ***uint8\_t LL\_RTC\_AlarmTypeDef::AlarmDateWeekDay***

Specifies the RTC Alarm Day/WeekDay. If AlarmDateWeekDaySel set to day, this parameter must be a number between Min\_Data = 1 and Max\_Data = 31. This feature can be modified afterwards using unitary function **LL\_RTC\_ALMA\_SetDay()** for ALARM A or **LL\_RTC\_ALMB\_SetDay()** for ALARM B. If AlarmDateWeekDaySel set to Weekday, this parameter can be a value of **RTC\_LL\_EC\_WEEKDAY**. This feature can be modified afterwards using unitary function **LL\_RTC\_ALMA\_SetWeekDay()** for ALARM A or **LL\_RTC\_ALMB\_SetWeekDay()** for ALARM B.

## 75.2 RTC Firmware driver API description

### 75.2.1 Detailed description of functions

#### LL\_RTC\_SetHourFormat
